1. 毕业或工作前就结婚 #101001

It is argued that getting married before finishing school or getting a job is foolish. To what extent do you agree or disagree? #101001

范文 1

There is an ongoing debate on the timing of getting married. Some people claim that getting married before being financially independent is not a good idea whereas some disagree. Personally speaking, I strongly agree that getting married before finishing study or getting a job is foolish.

The foremost reason is that getting married before completing school or getting a job can establish a financial burden because couples do not have enough income to support their life. Specifically, various aspects of life incur costs for married couples when supporting a family such as buying a house or purchasing a vehicle. For example, recent research conducted by Monash University revealing that 71.3% of married couples before finishing school or getting a job could divorce as they do not enough income to support their living costs.

On the other hand, getting married before finishing study or getting a job can limit people's social networks, which is negative to develop their future careers. To elaborate, those who are married couples must spend more time on family affairs than socializing with people from schools or the professional field, which deprives the opportunities to obtain new information to develop their study or career. For instance, a report conducted by New York University showing that 76.5% of people agreed that getting married before finishing their studies or getting a job could influence their social networks negatively.

In conclusion, I strongly agree that getting married before completing studies or getting a job is irrational due to the creation of financial burden and limitation of people's social networks.

2. 成长环境是否影响个人成就，如何影响 #101002

Nowadays, people believe that environment influence their accomplishment. Some people think their success and accomplishment were influenced by the places where they grew up. Do you think the environment does or does not affect people's accomplishment and how it affects? #101002

范文 1

There is no doubt that there are many people who are defined by the places they grow up in. Personally speaking, I believe that Salvador Dali, one of the most popular artists, is highly influenced by his hometown, Spain, which will be explained as follows.

First and foremost, Dali produced over 1,500 paintings in his career, most of which are inspired by the seascape of Spain's Costa Brava. To be specific, the stunning landscape and natural environment in Spain, including rock pools and cliffs provided countless ideas for Dali's artworks. According to recent research by Oxford University which stated that 90% of people agreed that Spain has the greatest impact on Dali's masterpieces.

Secondly, Dali had a great contribution to developing the Surrealist movement while Spain's role in the movement is significant with its open culture. To be precise, many well-known representative artists from Spain were actively involved in the Surrealism movement in the twentieth century, and therefore Spain provides a good learning atmosphere for Dali. According to a recent report by Bloomberg which stated that 80% of people agreed that Spain is a great contributor to the Surrealist movement.

With all the points above, the conclusion can be made that the environment does affect people's accomplishments in terms of the natural environment as well as cultural factors.

Nowadays, people believe that environment influences their accomplishment. Some people think their success and accomplishment were influenced by the places where they grew up. Do you think the environment does or does not affect people's accomplishment and how it affects? #101002

范文 2

In recent years, whether the environment influences people's accomplishments or not has caused numerous controversies and drawn the attention of the public. Some people hold the view that their success and accomplishment were influenced by the places where they grew up, while others have a different opinion. As far as I am concerned, I strongly agree with the former argument, which can be supported by the following reasons.

First and foremost, the most obvious factor lies in the fact that milieu direct influences people's behaviors and qualities. To be more specific, people always mimic behaviors of the people around them during the characteristic shaping period, which means people tend to learn from the milieu to form their personality. This can be proved by my own experience as an example that my mother is very hard-working so I tried to study as hard as she did when I was young.

Furthermore, another point to be taken into consideration is that the well-organized education system can provide comprehensive education and cultivation. In other words, comprehensive education provides more resources so that students can broaden their horizons and become more cultured, leading to success and accomplishment. This can be established by a recent survey by Oxford University which states that 76% of people with great success or accomplishment receive a quality education.

From what has been discussed above, we may safely conclude that some people's success and accomplishment were influenced by the places where they grew up. To address this issue, governments and individuals should make concerted efforts to find solutions. Only in this way can we have a better future.

3. 法律改变人的行为 #101003

Some people think human behaviors can be limited by laws, others think laws have little effect. What is your opinion? #101003

范文 1

In contemporary society, the issue of whether the law changes humans' activities or not has been largely debated. Some claim that people alter their behaviors by improving awareness. Nonetheless, I personally strongly disagree with this idea, which means I believe that it is the law that changes individuals' behaviors.

To begin with, laws significantly reduce the earnings of management in corporate governance. Senior executives used to have the power to choose whether or not to disclose bad news about their company because they only want to show the positive side of the company to shareholders and investors to maximize their interests. However, this kind of malfeasances is detrimental to shareholders' rights in the long-term. The significant problem is not solved until the related bad behavior was punished after the law is imposed. Irrefutably, the pertinent law has regulated and changed the managers' bad behavior, which virtually protects other parties' rights and proves that the law will change people's actions.

Moreover, laws change behaviors of using shareholders' capital to pursue higher returns on investment to maximize their utilities. As shareholders' capital is relatively free to agents and their compensations are based on short-term returns, agents used to take high-risk projects to earn more rewards in shareholders' interests. The financial crisis in 2008 is one of the outcomes of managers' malpractice. Luckily, the United States government had imposed the Claw-back Act to help investors claim back their losses resulting from agents malpractice, which significantly stimulated and altered CEOs' behaviors in risk management.

By and large, as laws change senior executives' behaviors undoubtedly, I strongly believe that laws will change people's actions and create a balanced society for human beings.

Some people think human behaviors can be limited by laws, others think laws have little effect. What is your opinion? #101003

范文 2

There is no doubt that the issue of whether people's actions can be limited by law is open to much debate. From my perspective, I believe that human behaviors can be limited by laws, which can be supported by the reasons as follows.

The first and most important reason for my belief is that the Australian Alcohol Law decreased the number of people who drive after alcohol, which is quite reasonable as laws have legal powers which means that any individual disobeys the law will face serious punishment. As a result, people's actions are limited because they are afraid to face the serious consequences of breaking the law. To further support the above statement, the number of drunk-driving people has decreased by 75% since the issue of the Australian Alcohol Law. Hence, the Australian Alcohol Law can limit people's actions in the way of preventing them from driving after drinking.

The second reason for the argument is that the Tobacco Taxes Law reduced the number of people who smoke, which is understandable because tax laws put a duty on tobacco products and cause a significant rise in the price. Thus, some of the smoking people will quit smoking and stop buying cigarettes as they cannot afford it anymore due to the increase in the price. This can be established by a recent study conducted by Oxford University which stated that the number of people who smoke decreased by 55% after the issue of the Tobacco Taxes Law.

With all the points above, a conclusion can be made that people's actions can be limited by law because the Australian Alcohol Law decreased the number of people who used to drive under the influence of alcohol and the Tobacco Taxes Law reduced the number of people who smoke.

Some people think human behaviors can be limited by laws, others think laws have little effect. What is your opinion? #101003

范文 3

Laws are important to current society because it distinguishes between right and wrong. Some people think human behaviors can be limited by laws, whereas others think laws have little effect. Personally speaking, I strongly believe that laws can limit human behaviors.

On the one hand, laws are restrictive approaches to prevent the emergence of crime events. To be specific, severe punishments can stop potential criminals, so laws can deter them from robbing, shoplifting, and bribery. That the sentences make them fear the consequences of breaking laws or regulations ensure them to behave decently. For example, this can be established by a recent study of Oxford University, which stated that laws can prevent 70% of crimes take place.

On the other hand, laws provide general guidance for people, which is obvious because it gives correct instructions when people are facing an ethical dilemma or moral hazard. It teaches individuals how to deal with complex issues and introduces a border between right and wrong, which means it can prevent people from doing unethical things. For instance, recent research conducted by Melbourne University shows 80% of laws ensure people do the right things.

In conclusion, I reckon that laws can limit human behaviors because it is a restrictive approach to prevent crimes and provides general guidance for individuals.

4. 员工参与决策的利弊 #101004

Some employers involve employees in the decision-making process of products and services. What are the advantages and disadvantages? #101004

范文 1

Nowadays, decision making has played an important role in a corporation's operations. Some people indicate that getting employees involved in decision making has huge benefits, while others think that senior executives should not get them involved due to the detrimental impacts. Personally speaking, I strongly agree that making employees participate in decision making has both advantages and disadvantages.

On the one hand, making employees take part in decision making can lead to a more professional final decision. Since a person working in a particular field for a long time can provide insight into better management, the final decision would be influenced by a more professional and inspirational way. For instance, the companies in Silicon Valley always encourage their staff to take part in decision making. As a result, they always make a comprehensive and accurate decision due to the advice from IT experts with prolific experience.

On the other hand, making employees participate in decision making may result in higher labor cost. As involving a huge number of employees in decision making will generate numerous opinions, companies need to assign and pay for more staff to collect and analyze these propositions before concluding a final decision. For example, Google started in 2018 to get employees involved in decision making related to smartphone design, and they have received five hundred ideas so far. Thus, they have to allocate 5 more senior managers, leading to a significant cost rise from salary payment and bonus.

To sum up, getting employees involved in the decision has both merits and demerits. It depends on the specific situation to weigh the two sides of the coin.

Some employers involve employees in the decision-making process of products and services. What are the advantages and disadvantages? #101004

范文 2

There is no doubt that some employers involve employees in the decision-making process of products and services. Personally speaking, I staunchly believe that every coin has double sides, but the advantages of engaging staff in the decision-making process outweigh the disadvantages.

The key benefit of involving employees in some business decisions is that it can reduce external consulting costs dramatically. To be more precise, companies do not need to hire a strategy consulting company to provide long-term strategic advice, which is obviously because entry-level employees have deep insights about the services the company offers. To further support the above statement, I read a report which stated that by involving employees in the decision-making process of manufactured items actively within Apple Inc. between 2013 and 2015, enterprises can reduce 80% of failure cost without aiding from an independent consulting company.

On the other hand, more lines of communication leading to potential inconsistency in decision-making are the main disadvantage of the employee engagement system. To be more specific, managers may have a hard time monitoring decisions and activities with employee involvement to protect against negative consequences and to restrict the potential for chaos. However, this drawback is minimal compared to the benefits, which can be established by the University of Oxford which stated that 68% of companies prefer involving staff in the decision-making process because of cost control.

With all the points above, the conclusion can be drawn that involving employees in the decision-making process of products and services can bring more positive effects than negative because it can reduce external consulting expenditure despite showing the potential ill-defined problems of the manager-employee boundary.

Some employers involve employees in the decision-making process of products and services. What are the advantages and disadvantages? #101004

范文 3

In some companies, employers let employees be involved in the decision-making process of products and services. Personally speaking, this management method creates both advantages and disadvantages.

Firstly, the advantages of letting employees attend a decision-making meeting are that it can increase employees' working performance. To be more specific, when employees are involved in companies' decision-making processes, they will feel being respected, improving their enthusiasm to work. For example, a recent report from the Microsoft Company can further support my idea, which mentions when employees getting involved in decision-making meetings for a new wifi adaptor, their working performance increased at least 89%.

On the other hand, the disadvantage for some employers to involve employees in the decision-making process about their products and services is that such a method would slow down the working efficiency of companies. To be more specific, employees involved in the decision-making process need to follow several complex procedures in accordance with the regulatory framework of companies, and it consumes too much time, which will reduce the efficiency of companies. To further support my statement, an article published in China Daily revealed that 50% of employers believed that employees participating in the decision-making process may slow down the working efficiency of companies.

With all the points above, engaging employees in the decision-making process brings both benefits and problems. Therefore, companies should weigh the advantages against the disadvantages before determining the strategy.

5. 书面考试是否有效评估学习成果 #101005

Formal written examination can be a valid method to assess students' learning. To what extent do you agree or disagree? #101005

范文 1

There is no doubt that a formal written examination has been a conventional way to evaluate students' performance. Some people argue that this is the best way for assessment in schools, whereas others believe that more innovative methods should replace written exams. Personally speaking, the formal written examination is a valid method to assess students' learning process, which can be supported as follows.

To start with, the formal written examination can be a valid method to assess students' learning because it can evaluate whether they have a solid foundation of the subjects they learned in this term. To be specific, the formal written exam is an integrated test, which is testing on how well the students have mastered the knowledge, and the results can reflect the students' achievements by the provision of test marks. To take my own experience as an example, I gained a low score in one subject, which means I did not grasp the knowledge well.

In addition, the second reason is that the formal exam can assess how much time students spend on reviewing their courses. To illustrate, if students spend enough time on each subject and have acquired a deep understanding of it, they will get good scores from the formal exam. For example, there is a research of Oxford University which states that over 76% of the students who spend sufficient time on study can gain good academic performance from the exams, which means a formal written exam is a valid method.

With all the points above, the conclusion can be drawn that formal written examination is a valid method because it can directly evaluate students' performance. In this regard, schools should promote the use of such exams.

6. 海外留学有必要吗 #101006

问法二：There is no value to travel overseas for study, as you can be a good scholar even without leaving your home base. It is or isn't necessary to travel overseas for a better education? To what extent do you agree, and give your opinion. #101006

范文 1

Some people believe that studying overseas is overrated and there is no value to travel overseas for better education, whereas others have opposite opinions. Personally speaking, I totally believe that it is necessary to study abroad for better education.

The first and most important reason for my belief is that studying abroad can enhance students' learning ability. To be specific, traveling overseas for education can be a challenge for students because of the language and cultural barriers, which drives them to study harder. In this case, students are pushed to improve their learning ability to better outperform their peers. For example, an investigation conducted by Melbourne University shows that 80% of students who are studying overseas claimed they have gained enhanced their learning ability.

On the other hand, the second reason for this argument is that students can benefit from better language learning when they study abroad. To illustrate, traveling overseas to pursue their academic goals provides a multitude of opportunities to speak with foreigners who are experts in their language, so this offers students a great immersive language learning experience which can equip them with more skills and vocabularies of the foreign language. According to the annual report of the Australian government, more than 70% of the international students believe that they have achieved great progress in English Learning since they arrived in Australia.

With all the points above, the conclusion can be drawn that it is necessary to study abroad because this education opportunity can improve students' learning ability and help them master a foreign language.

7. 欠发达国家的旅游业 #101007

The disadvantages of tourism in less developed countries are as great as the advantages. What is your opinion? #101007

范文 1

Recent years have witnessed a significant increase in tourism in less developed countries, which has brought a heated debate about the advantages and disadvantages of this trend. Views on this issue vary from people to people. From my perspective, there are both advantages and disadvantages of tourism in developing countries.

On the one hand, the key benefit of tourism in developing countries is that it can boost the local economy, which is obvious because the influx of tourists can provide many employment opportunities to the local job market and promote local businesses including restaurants, supermarkets, and hotels, which in turn boosts the local economy. According to the latest report published by the World Bank, tourism is the primary source of income in Cambodia, which increases the local GDP by 60%.

On the other hand, the disadvantage of tourism in less developed countries is that the development of this industry has detrimental impacts on the local environment. To illustrate, tourism often comes with pollution including increased carbon footprints and rubbish disposal. While developing countries have less capacity to handle these environmental challenges, failure to address these problems can lead to exacerbated greenhouse effects, and land pollution. The data published by the UN revealed that tourism is responsible for more than 60% of environmental deterioration in less developed countries.

To summarize, although it is hard to arrive at an absolute conclusion on this complicated issue, I am still fully convinced that the advantages of tourism in less developed countries outweigh the disadvantages.

The disadvantages of tourism in less developed countries are as great as the advantages. What is your opinion? #101007

范文 2

There is no doubt tourism development is imperative in developing economies. Some people argue that development should be restricted because of the problems brought by tourism, whereas others disagree. Personally speaking, I think every coin has double sides, but the advantages of tourism in less developed countries outweigh the disadvantages.

The key benefit of tourism in less developed countries is that it helps with the economic growth in these regions, which is obvious because developing tourism attracts consumption from international visitors, and prosperous tourism can improve local employment rate resulted from the boosting of the service industry. To further support the above statement, an investigation conducted by Melbourne University stated that 60% of economic growth is brought by tourism in less developed countries in the year 2013.

On the other hand, it is arguable that tourism in less developed countries also has a negative impact on the local environment, which is reasonable because garbage pollution and improper human activities cause damage to the natural environment. However, this drawback is minimal compare to the benefits, which can be supported by a recent study by Oxford University stated that 79% of people voted that tourism can be more beneficial than harmful in less developed countries.

In conclusion, the advantages of tourism in less developed countries are more influential than the disadvantages. In this regard, the authorities of developing countries should devote more effort to developing this industry to bring more economic growth.

The disadvantages of tourism in less developed countries are as great as the advantages. What is your opinion? #101007

范文 3

Tourism is considered to be an important role in less developed countries. This might lead some to assume that the merits of tourism overshadow its demerits. However, I strongly believe that the disadvantages of tourism in less developed countries is as great as the advantages, which can be supported by the reasons as follows.

First and foremost, tourism can contribute to the local economy. To be more specific, tourism will encourage the emergence of souvenir shops, restaurants, and other tourism-related services, boosting the aggregate income and employment opportunities. Such a perfect case can be exemplified by the fact that I read a report issued by BBC news in 2019, the income of tourism has taken up 50% of revenue.

On the other hand, the problem brought by tourism is that the development of this sector will create environmental problems. In other words, those less developed countries usually do not have effective waste disposal systems in place and lack sufficient funds to deal with a large amount of waste created by the tourists. In my observation, for instance, according to a 2020 survey issued by Oxford University, the garbage from tourists is twice than the garbage from the native people.

With all the points above, what I discussed above confidently conveys that the disadvantages of tourism in less developed countries are as great as the advantages because tourism can contribute to the local economy and create environmental problems.

8. 极限运动 #101008

问法一：In your opinion, what are the advantages and disadvantages of extreme or adventure sports? #101008

范文 1

These days, there is an open debate on the pros and cons of adventure sports. Some may believe that such sports activity is dangerous, while others may claim that it has some beneficial effects. From my perspective, extreme sports have both positive and negative aspects, and I will explain my point of view from both sides in the following argument.

On one hand, extreme sports are advantageous because they can boost the economic development of a country. To be specific, governments can take advantage of extreme sports as a featured element for their tourism industries to attract visitors, which may create a lot of work opportunities for local people. For example, in New Zealand, skydiving and bungee jumping are both popular activities, and it has 120 new positions to meet the needs of the increasing demand for participating in these adventure sports, which makes a 15% increase in GDP in 2010. As a result, the benefits from extreme sports to economic growth is quite obvious

On the other hand, those who argue against the notion claim that such sports may cause physical injury to human beings. Specifically, although many extreme sports require protective equipment and professional guidance when an emergency occurs, it is too hard for people to react, which is a crucial life threat. For instance, Paul Walker who was a professional car racer, dead in a racing accident in 2015, as the vehicle was totally out of control after the crash. To sum up, doing extreme sports is quite risky and dangerous.

In conclusion, since participating in adventure sports can both drive economic development and cause physical injury or even death, there are both advantages and disadvantages of extreme sports.

问法一：In your opinion, what are the advantages and disadvantages of extreme or adventure sports? #101008

范文 2

Recent years have witnessed a heated debate about the advantages and disadvantages of extreme sports. Some people argue that there are many advantages involved in extreme or adventure sports while opponents do not. As for me, I think adventure sports have both advantages and disadvantages.

On the one hand, the key advantage of extreme sports is that it can enlarge individuals' social circles, which is obvious because extreme or adventure sports provide opportunities for people to meet others who share similar interests with them. Therefore, people can make more friends with great ease, expanding adventure sports fans' social networks. For example, I made more than 20 new friends when I did extreme sports and some of them remain to be my best friends.

On the other hand, the disadvantage is that extreme or adventure sports involve significant risks. To illustrate, there is no doubt that extreme sports are so dangerous that engagement in such activities is highly likely to cause severe injuries or even death. According to the latest report published by the Australian government, more than ten thousand people died last year because of extreme sports.

In summary, although it is a difficult issue to have an absolute conclusion, I am still fully convinced that extreme sports have more benefits than drawbacks.

问法一：In your opinion, what are the advantages and disadvantages of extreme or adventure sports? #101008

范文 3

There is no doubt that there is an open debate on the advantages and disadvantages of extreme or adventure sports. Some people point out that extreme sports may involve a high degree of risk, whereas others think that it brings a lot of advantages. Personally speaking, I strongly believe that extreme or adventure sports have both advantages and disadvantages, which can be supported by the reasons as follows.

The first and the most important reason for my belief is that extreme sports are advantageous because they can make people's life rich and fascinating. To be more specific, people who enjoy extreme sports activities can expand their social circles and create many unforgettable moments as they push their limits, achieving to broaden their horizons. To further support the above statement, I have read an article published by The Age that 73% of people stated that extreme sports help them in having a richer and more unique life experience.

On the other hand, extreme sports also bring risks as people may experience serious injuries and trauma while participating in such activities. To be more specific, extreme or adventure sports, such as skiing and snowboarding, can expose people to risks of encountering an avalanche and may cause injuries or even a loss of life. This can be established by recent research by the University of Melbourne that 84% of skiing accidents have caused people to death in 2018.

With all the points above, the conclusion can be made that extreme or adventure sports can enrich participants' experiences, but it may also put people at risk of getting injured. In this regard, it is important that governments should devote sufficient funding and public awareness should be raised to improve this situation.

9. 大众传媒引发的信息革命 #101009

“The information revolution by modern mass media has both positive and negative consequences for individuals and for society.” To what extent do you agree? #101009

范文 1

Nowadays, the information revolution led by modern mass media has become a prevalent topic for debate. Some people point out that they have positive consequences for both individuals and society, while others indicate that they are harmful. Personally speaking, I agree that the information revolution led by urban mass media shas both positive and negative effects on individuals and society.

On the one hand, the information revolution lead by mass media can help individuals and society prevent the crisis. To illustrate, since there are numerous coverage and predictions about the natural disaster on TV and the internet, they will inform individuals and society to protect themselves and public property timely. For example, when I was living in Japan, a country with a high frequency of earthquakes, I found that every TV station was broadcasting earthquake predictions hourly. As a result, my friends and I can protect ourselves promptly at that time.

On the other hand, the information revolution brought by mass media could mislead the individuals and the society on prescription medications. In other words, since the drug industries spent a large amount of money on advertisements with a misleading tone and inaccurate information, consumers are more likely persuaded to purchase prescription medicines that they don't need. For instance, a drug company promoted a kind of diet pills and claimed any consumer who took them would lose weight by 40 kg in a week. However, both my friend and I still kept the same weight and didn't get rid of obesity after purchasing and using this drug.

To sum up, the information revolution generated by modern mass media has not only a positive impact on individuals and the society such as the benefit of preventing the crisis but also negative influence such as the misleading on prescription medications.

10. 大众传媒影响观点与个性 #101010

The mass media, including TV, radio, and newspapers, influences our society and shapes our opinions and characters. What is your opinion? #101010

范文 1

There is no doubt that the functions of mass media have attracted numerous debates. While some people believe that such tools cause a great influence on our life, others disagree. Personally speaking, I strongly believe that the mass media, including TV, radio, and newspapers, influences our society and shapes our opinions and characters.

First and foremost, the mass media makes society connect more closely because the media delivers the latest information to everyone in society every day. In this case, people can overcome geographical and time constraints to discuss topics they are interested in. To further support the above statement, I can get the latest news through some social websites every day, and exchange my opinion with others through comments.

On the other hand, the mass media also has a negative influence on shaping our opinion and characters because it can spread false information sometimes and mislead people. To illustrate, unverified news can be released from TV and newspaper due to the lack of news regulation, which can impact people who may be easily swayed by the wrong opinion. This can be established by a recent study by Oxford University which stated that 79% of people agreed that untrue news from mass media has a negative impact on shaping people's opinions and characters.

With all the points above, the conclusion can be drawn that the mass media influences our society because it brings people as a community, and it also shapes our beliefs with the diverse information it offers.

The mass media, including TV, radio and newspapers, influences our society and shapes our opinions and characters. What is your opinion? #101010

范文 2

Nowadays, the mass media plays a significant role in our daily life. Some people argue that the information revolution has reformed society and individuals, whereas others disagree. Personally speaking, I strongly believe that the mass media, including TV, radio, and newspapers, influences our society and shapes our opinions and characters.

First and foremost, the mass media, including TV, radio, and newspaper, improves people's ability for critical thinking. To be more specific, the mass media provides a wide variety of opinions on hot topics which makes people think in-depth when there are conflicting arguments. This can be established by a recent study by Oxford University which stated that 78% of people think more critically under the mass media environment.

In addition, the second reason is that mass media may cause social riots, which is reasonable because some social media platforms provide violent information and bloody video, so some people who lack judgment may be influenced and start to imitate these negative behaviors to cause chaos in the community. To further support the above statement, I have read a recent study of Oxford University stating that 89% of people believe that social media can increase the number of violent cases in society.

With all the points above, the conclusion can be drawn that the mass media influences us in various ways as it strengthens our critical thinking ability and may even trigger social protests.

11. 大众传媒对年轻人的影响 #101011

Mass media, including TV and newspaper, have a great influence on humans, particularly on the younger generation. It has a pivotal role in shaping people's opinions. Discuss the extent you agree or disagree. Use your own experience or examples. #101011

范文 1

There is no doubt that TV and newspapers have affected individuals through the ages. Some people believe that there is great influence caused by the mass media, while others disagree. Personally speaking, the mass media have a great influence on humans in shaping people's opinions, particularly on the younger generation.

The first and the most important reason for my belief is that the mass media can broaden people's horizons, which helps people embrace more opinions. To be more specific, since the mass media provides a platform for users to share their feelings, the readers are able to hear more voices and comments from different perspectives, which leads to the inadvertent accumulation of opinions. To further support the above statement, according to a survey by Oxford University, 85% of the opinions of the survey volunteers are influenced by the mass media.

On the other hand, the second reason for the argument is that critical thinking skills can be trained and improved through the connection with the mass media. To be more specific, since different media companies tend to transfer information with different attitudes and arguments, the readers or audiences will analyze the news rationally and critically, in which critical thinking skills will gradually be enhanced. To further support the above statement, according to a survey by Cambridge University, 95% of the people agree with the idea that the mass media can help people shape their critical thinking.

With all the points above, the conclusion can be made that people's views can be significantly influenced by the emergence of mass media as such information sources can give people more perspectives and help people develop critical thinking.

12. 气候变化谁负责 #101012

Climate change is a concerning global issue. Who should take the responsibilities, governments, big companies, or individuals? #101012

范文 1

There is no doubt that climate change is a concerning global issue. Some people point out that governments should take responsibility, whereas others would believe that big companies and individuals also have responsibilities. Personally speaking, I strongly believe that governments should take the major responsibilities for climate change, which can be supported by the reasons as follows.

The first and the most important reason for my belief is that governments have more power to make changes, which is obvious because governments have the legislative power to set relevant rules and regulations, minimize the origin that causing climate change, and constrain improper actions. To further support the above statement, the Chinese government set a rule to prohibit coal combustion and using greener energy instead, which effectively reduce carbon emission.

On the other hand, the second reason for this argument is that governments have sufficient funds to make all the plans into reality, which is reasonable because it is a necessary support to formulate a relevant rule, cultivate relevant talents, plan for marketing, and campaign for citizens to know more about climate change. This can be established by a recent study that government intervention for climate change is the most effective way in a short time.

With all the points above, the conclusion can be made that governments play a major role to solve the climate change issue because it has more power and sufficient funds.

13. 电视传播信息、排解孤独 #101013

Nowadays television has become an essential part of life. It is a medium for disseminating news and information, and for some it acts as a companion. What is your opinion about this? #101013

范文 1

There is no doubt that television has become an essential part of life. Some people point out that television is a medium for disseminating news and information, whereas others would believe that it acts like a companion. Personally speaking, I strongly believe that television has the function of both, news dissemination and companion in daily life, which can be supported by the reasons as follows.

The first and the most important reason for my belief is that television plays an important role in popularizing all kinds of news, which is obvious because information spreads and updates quickly and timely, which helps people get access to news that happens all over the world. To further support the above statement, my grandfather knows a lot of fresh news and knowledge from all over the world through news and documentary TV program.

On the other hand, the second reason for this argument is that television is an important entertainment tool that accompanies people every day for relaxing and reduce loneliness, which is reasonable because it has a lot of interesting programs to cater to different ages groups. This can be established by a recent study that 65% of people choose television as their indispensable entertainment way every day.

With all the points above, the conclusion can be made that televisions is a medium of news dissemination as well as companion because it plays an important role for popularizing and entertainment.

14. 日用消费品的营销应该重品牌还是重优惠 #101015

Should marketing for consumer goods companies like clothing and food focus on reputation or on short term strategies like discount and special offers? Why? #101015

范文 1

There is no doubt that many companies use various marketing techniques to attract customers. Some companies attract customers through discounts and special offers, while others concentrate on developing brand reputation. In my opinion, companies should focus on improving their reputation, which can be supported by the reasons as follows.

First of all, through focusing on building their reputation, companies will eventually gain brand recognition from their customers. Specifically, if the company is well known by customers, they would recommend the company's products to their friends and family, which will not only increase customers' loyalty but also expand their customer scale. For example, despite the absence of any special discounts or offers, my friends and I are loyal Apple customers, and we often recommend Apple products to anyone we know since the Apple cooperation has built a great reputation worldwide.

Furthermore, focusing on developing a company reputation also has benefits for shareholders of the companies as well. To be more specific, as the companies become well known, its share price will also increase and this will maintain the shareholder's confidence in their investment. To further support this argument, a statistical study conducted by Oxford University states that 70% of the economists in Britain suggest that increasing brand reputation benefits both shareholders and the companies.

With the argument mentioned above, the conclusion can be drawn that marketing for consumer goods companies should focus on reputation because this cannot only expand customer scale but also benefits shareholders and the company.

Should marketing for consumer goods companies like clothing and food focus on reputation or short term strategies like discount and special offers? Why? #101015

范文 2

There is no doubt that there is an open debate on whether marketing for consumer goods companies like clothing and food should focus on reputation or short term strategies like discount and special offer. Some people point that marketing for consumer goods should pay more attention to their reputation, whereas others disagree. Personally speaking, I strongly believe that marketing for consumer goods companies should lay more emphasis on their reputation, which can be supported by the reasons as follows.

The first and the most important reason for my belief is that companies focusing on reputation strategies can enhance customer loyalty, which is obvious because companies' guarantee on the premium quality of durable products and the consistency of their excellent service provision improve customers' satisfaction and thus retain more customers. To further support the above statement, I have found a survey made by Monash University that there is a 73% increase in the customer retention rate of companies who focus on reputation strategies.

On the other hand, the second reason for this argument is that marketing strategies on reputation can help consumer goods companies gain trust from their customers, which is reasonable because companies can build a strong brand image that improves their company position in the marketplace to spread and increase their credibility among customers. This can be established by research by Oxford University that 84% of clothing companies stated that promoting reputation helps companies gain trust.

With all the points above, the conclusion can be made that marketing for consumer goods companies should lay more emphasis on their reputation strategies because it can enhance customer loyalty and gain trust from customers. In this regard, it is important that government should devote sufficient funding and public awareness should be raised to improve this situation.

Should marketing for consumer goods companies like clothing and food focus on reputation or short term strategies like discount and special offers? Why? #101015

范文 3

There is no doubt that companies should develop a sound marketing strategy to ensure their continuous sales growth. Some people argue that such strategies should focus on reputation, while others believe discounts are more effective. Personally speaking, marketing for consumer goods companies like clothing and food should focus on reputation, which can be supported as follows.

To start with, the first and the most important reason is that marketing strategies that focus on reputation are good for maintaining the consistency among its product quality. To be specific, when companies focus on their reputation, they have to ensure their high-quality standards of goods for good customer experience and nice reviews from customers, so they will concentrate on producing goods of high-quality. There is research by Oxford University which states that over 76% of the food companies which pursue their reputation have a good quality of their products.

Secondly, the companies which aim to focus on their reputation will be benefited to improve their market share. To illustrate, when a company strives to get a good reputation, it will invest funds to make a word-of-mouth marketing for their products, so they will win a large share of the market against their competitors. There is another study by the University of Sydney which claims that over 56% of the companies which focus on their reputation have a larger marketing share than the others in the same industry.

with all points above, the conclusion can be drawn that consumer goods companies should market for their reputation to elevate their product quality and gain more market share. In this regard, companies in this industry can develop marketing strategies accordingly.

Should marketing for consumer goods companies like clothing and food focus on reputation or short term strategies like discount and special offers? Why? #101015

范文 4

Whether marketing strategies should concentrate on reputation or discounts has sparked a heated debate. Different people have diverse opinions. Personally speaking, marketing for consumer goods companies like clothing and food should focus on short-term strategies like discounts and special offers, which can be supported as follows.

Focus on short-term strategy

First and foremost, short-term marketing strategies can help the company to increase its market share. To be more specific, strategies such as discounts and special offers are capable of attracting more potential customers from the market and to purchase the products. Thereby, the company's market share will grow as an increase in the customer base. For example, a study carried out by the University of Melbourne claims that up to 85% of consumers' goods companies' market share increase benefited from their short-term marketing strategies.

Secondly, short-term marketing strategies can help the company improve customer satisfaction. To be more explicit, more sale activities and special offers provide customers with more affordable prices but in the same quality, which helps improve satisfaction among their customers and build up consumer loyalty to this brand. News at China Daily shows that over 70% of consumer goods companies believe that short term marketing strategies are beneficial to improving their customer satisfaction.

In conclusion, companies in the consumer goods sector should develop short-term marketing strategies because such strategies can help the company to gain market share and secure consumer satisfaction.

15. 维护过去的建筑 #101023

It is important to preserve the beautiful buildings of the past, even if it will be expensive to do so. To what extent do you agree or disagree with it?
#101023

范文 1

Recently, the preservation of historical buildings has become a prevalent topic for debate. Some people point out that it is necessary to conserve these masterpieces of the past, while others indicate that it is not worthy due to the expensive maintenance fee. Personally speaking, I agree that it is not important to preserve the gorgeous buildings of the past.

First of all, preserving ancient architecture requires vast sums of capital. To maintain these smashing buildings, governments need to afford not only expensive equipment but also sophisticated experts. For example, the government of Melbourne has maintained Flinders Station for ten years. During this period, they have hired twenty experts with the degree of Master of Architecture from Princeton University and pay them eight hundred dollars as stipend every day. Moreover, the investments in advanced technological machines have been accumulated to the amount of ten thousand dollars.

Apart from that, conserving the old buildings is detrimental to urban planning administration. Since some buildings are located at the pivot of urban transportation routes, urban planning in this area will be hindered. For instance, the Leaning Tower of Pisa has been a famous tourist resort in history. However, as it has been located at a junction of Pisa's metro lines, the development of Pisa's subway system has stopped since 2016.

In conclusion, preserving ancient architecture not only requires a large amount of capital but also hinders urban planning administration. It is not worthy to preserve the beautiful buildings of the past.

16. 大型购物广场取代小商铺 #101030

**Large shopping malls are replacing small shops. What is your opinion on this?
Do you think this is a good or bad change? #101030**

范文 1

It seems that large shopping malls are replacing small shops. Personally speaking, I strongly agree that this is a good change because it brings many benefits to society.

On one hand, large shopping malls can provide customers with merchandise at more affordable prices. To be more specific, as there are many different shops selling similar products in the same large shopping mall, these stores have to compete with each other and accordingly offer a lower profit margin on merchandise, which leads to lower prices for consumers. For example, research conducted by Harvard University indicates that prices of the same goods in shopping malls are 15% lower than those in small shops on average.

On the other hand, shopping in large shopping malls may save a lot of time for customers who need to purchase multiple kinds of products. To be more specific, since there are nearly all varieties of stores in the shopping mall, shoppers are able to complete almost all errands in the same location instead of spending too much time traveling among different small shops. For instance, according to a statistic conducted by Stanford University, it could save customers up to 1.3 hours to purchase in large shopping malls comparing to buy the same goods in small shops.

In conclusion, it is a good chance that large shopping malls are replacing small shops because large shopping malls can offer consumers more affordable prices and help consumers save a lot of time.

**Large shopping malls are replacing small shops. What is your opinion on this?
Do you think this is a good or bad change? #101030**

范文 2

There is no doubt that large shopping malls are replacing some small shops. Personally speaking, I strongly believe it is a good chance, which can be explained by the following reasons.

First and foremost, large shopping malls replacing small shops can improve shopping efficiency. To be more specific, since large shopping centers replaced single stores, all kinds of products and services are integrated into one place, so customers need not spend time traveling between different shops to complete their shopping lists. For example, I have read a recent study Oxford University stating that 80% of people believe the large shopping center can save shopping time.

Moreover, large shopping malls replacing small shops can provide lower prices to customers. To be more explicit, as large shopping malls replace small shops, vendors face high commercial competition to attract more consumers, so the product price will be set to be more affordable to outperform other contenders. For instance, a study conducted by Cambridge University demonstrates that the price in big supermarkets is 15% cheaper than that in small stalls.

With all the points above, the conclusion can be made that large shopping malls replacing small shops is a good chance because it can improve shopping efficiency and can provide a lower price to customers.

17. 数码时代的优点缺点 #101032

Some people claim that the digital age has made us lazier, others claim it has made us more knowledgeable. Discuss both opinions, use examples to support. #101032

范文 1

There is no doubt that people's life has been changed a lot due to the impact of digital devices. Some people argue that the digital age has made us lazier whereas others state it has made us more knowledgeable. I strongly believe that the digital age has made us lazier while it has also made us more knowledgeable, which can be supported by the reasons as follows.

The reason that the digital age has made people lazier is that it eliminates the motivation to go outdoors. This is because the software allows people to perform activities via online platforms instead of physically going outdoors, such as food delivery and online banking. As a result, people rely increasingly on these digital devices and hence become lazier. This can be established by my own experience that I become reluctant to go outdoors after I started to order foods on digital devices.

On the other hand, the reason that the digital age has made us more knowledgeable is that it helps people to acquire information more effectively because searching for information has been easier. Specifically, online searching tools like Google, accurately help individuals to locate materials in an extremely short time without going to a library. This can be established by a recent report conducted by Oxford University that its students' average time spent on searching for desired knowledge has decreased from 1 week to 1 hour with the help of Google.

With all the points above, the conclusion can be drawn that the digital age has made us lazier because it eliminates people's motivation to go outdoors, while it has made us knowledgeable since it helps people to acquire knowledge more effectively.

18. 网上信息是否应该付费 #101033

Oline materials like music, movies, xxx are accessible at no cost. Do you think online material should be accessed at no cost? Support. #101033

范文 1

There is a heated debate about whether people should pay for online materials like music and movies. Personally speaking, online materials should be accessed at cost, which can be supported as follows.

The most important reason is that paying for online materials enriches the variety of online production. To illustrate, paying for online content motivates producers to create more works because they can earn money and make a living from their production. Therefore, more people from different fields are willing to put more time and effort to post meaningful content online to attract viewers, which promotes the diversity of online content. This can be established by a recent study by Oxford University that the types of music increased from 1000 to 2500 after charging one dollar for each online song in America, varying from jazz to pop music.

On the other hand, paying for online content protects creators' intellectual property. Specifically, charging money for online works prohibits illegal uses as people are intimidated by being fined or jailed. Consequently, such requirement raises people's awareness to respect creators', which in turn protects owners' exclusive rights of their works. For example, last year, I found a beautiful photo on the internet and reposted on my blog, but I did not realize that I had violated the photographer's copyright. Five days later, I faced the penalties of 500 dollars for this infringed work. Since then, I would never use others' work without their permission.

In conclusion, online materials should be accessed at cost because they can enrich the diversity of online content and protect producers' copyrights.

19. 青少年需不需要上理财课程 #101034

Teenagers should receive lessons on principles of personal finance, such as investing and debt. To what extent do you agree with this statement? #101034

范文 1

There is no doubt that various categories of courses are provided in school. Some people argue that schools should teach teenagers lessons on knowledge of private finance, such as investing and debt whereas others disagree. I strongly believe that teenagers should receive lessons on principles of personal finance, which can be supported by the reasons as follows.

The first reason is that teaching teenagers lessons on principles of personal finance can prevent them from financial crimes. This is because finance classes are beneficial to cultivating teenagers' awareness of financial traps and hence educate them to avoid finance-related frauds. This can be supported by my own experience that I have avoided some financial traps owing to the knowledge I acquired in the financial classes in high school.

On the other hand, the second reason is that classes on personal finance help students to make wise financial decisions. Specifically, finance classes can guide teenagers to allocate their funds more efficiently during investing, so they can generate extra income apart from their salary. This can be supported by a recent report conducted by Oxford University that high school students who have received lessons on personal finance can gain 60% more money owing to their wising decisions on investments than their colleague who has not.

With all the points above, the conclusion can be drawn that teenagers should receive lessons on principles of personal finance because such classes help to prevent them from financial crimes and make wising finance-related decisions.

20. 学生应该学习，而不是考试 #101036

Some people claim that instead of having to prepare for huge numbers of exams in school, children should learn more. To what extent do you agree with this statement? Use your own experience to support your ideas. #101036

范文 1

It is a heated debate between school exams and children's learning. Some people point out that children should prepare for many exams in school rather than learn more, whereas others hold different opinions. Personally speaking, I strongly believe that children should learn more. The reasons are as follows.

The first and the most important reason is that study more can broaden children's knowledge range. To be more specific, learning more enables them to acquire knowledge from various fields such as history, geography, and literature. To further support this point, I read many books to learn about history, and after one year I became more familiar with the histories of China than any other classmates. This example supports that learning more can broaden my horizon.

On the other hand, children should learn more because it is beneficial for their future careers. To illustrate, learning practical skills such as communication skills rather than preparing for exams in school can be more helpful for student's future development in career. For example, after learning more about practical skills, I can communicate efficiently with my boss in an accounting firm, which helps me get promoted three months after I started my career.

With all the points above, a conclusion can be made that children should learn more instead of having to prepare for a lot of school exams because school exams fail to measure children's soft skills, however, learning more is beneficial for children's future career.

21. 无现金社会的优缺点 #101038

A cashless society is becoming a reality. More and more people are using credit cards for payment, and fewer people use cash. How realistic do you think it is? What do you see in its potential benefits or problems? #101038

范文 1

There is a heated debate that a cashless society is becoming a reality because the increasing number of people are using credit cards instead of using cash now. Some people point out that a cashless society is beneficial, whereas others concern about some potential problems like personal information security. Personally speaking, I strongly believe that a cashless society has come already into reality and it causes some potential problems such as cybercrimes.

Cash society has become a reality because of the rapid development of digital payment, which is obviously because people are more willing to use mobile phones and credit cards to purchase goods or pay for bills rather than carry lots of cash in their pockets. To further support this statement, one example is that nowadays I always use my credit card to buy foods from Coles or transfer money to my friends through internet bank, which shows that a cashless society has already become the reality.

On the other hand, a cashless society may increase the rate of cybercrimes to some extent. To illustrate, more people choose to use credit cards for payment especially shopping online, which raises the concern of personal information security because everyone can get access to their bank account if they can get their personal information such as card numbers and security code. One example is about my aunt, whose credit card information was given out resulting in a loss of \$1000 in her account due to the cybercrime.

In conclusion, as more and more people are using credit cards for payment, it is very realistic the cashless society will eventually become a reality, but it may increase cybercrimes.

A cashless society is becoming a reality. More and more people are using credit cards for payment, and fewer people use cash. How realistic do you think it is? What do you see in its potential benefits or problems? #101038

范文 2

A cashless society has drawn great attention worldwide. However, there has long been considerable controversy about how realistic it is and whether it is beneficial or problematic. Personally speaking, I believe a cashless society is realistic and it is beneficial.

Firstly, a cashless society is entirely realistic because equipment supporting electronic payment is very pervasive now. To be more specific, there are varieties of equipment such as POS machine, Apple Pay machine, and mobile scanner that can be found everywhere. For example, there was a statistical report done by Melbourne University in 2017 showing that 92.7% of the merchants in Australia have POS machines or other electronic payment equipment. Thus, a cashless society is realistic.

Secondly, cashless payment is very beneficial because it shortens the time of transactions. To elaborate, compared with cash payment, there will not be a change step during the cashless payment, which means the transaction time will be much shorter. For instance, it took me half an hour to finish the transaction in the supermarket when I used cash to pay, while it only takes me five minutes when I use a credit card to pay now. Hence, cashless payment is advantageous as it shortens the transaction time.

In conclusion, I deem that cashless payment is realistic and it is beneficial because of the shortening of transactions.

A cashless society is becoming a reality. More and more people are using credit cards for payment, and fewer people use cash. How realistic do you think it is? What do you see in its potential benefits or problems? #101038

范文 3

Nowadays, since more and more people are using credit cards in their daily transactions, whether a cashless society can become a reality has drawn a heated controversy. From my perspective, it is not realistic and there are some problems with a cashless society.

First and foremost, there are numerous reasons to explain why a cashless society is not realistic, but the most conspicuous one stems from the fact that cashless payment methods cannot work when there is a power failure, which is reasonable because people have to use the POS machines in order to pay by credits cards. However, all POS machines are dependent on electricity and without electric power, these machines cannot work. Thus, cashless payment methods will be unavailable when there is a power failure. For example, last weekend, there was a power failure near my home so people could not use credit cards to pay their bills.

One compelling negative consequence of a cashless society is the increasing rate of cybercrimes. To elaborate, in the cashless society, money is transferred from one account to another account through the Internet, which means hackers can attack the account and steal people's money through the Internet during a transaction. For instance, recent research from the University of Melbourne illustrates that the rate of cyber-crime has increased by 20 percent since people began to use cards for payment.

In conclusion, a cashless society is not realistic because cashless payment methods cannot work without power supply and one detrimental effect of a cashless society is the improving rate of cyber-crime.

22. 医学延长人们寿命是好是坏 #101039

**Medical technology is responsible for increasing the average life expectancy.
Do you think it is a curse or a blessing? #101039**

范文 1

There is no doubt that advanced medical technology will expand human life expectancy. Some people point out that it is a blessing, whereas others disagree. Personally speaking, I strongly believe that prolonging human life by technology could be a curse.

The first and foremost reason is that using technology to expand lifespan will increase the government's economic burden. To be more specific, people living longer will enlarge the population base of aged people, therefore, governments need more funds to afford age pensions. To further support this point, one research conducted by Oxford University indicates that 76% of sociologists voted that expanding human life through advanced medical technology will result in a huge economic burden for governments.

On the other hand, prolonging human life through advanced medical technology will increase family financial expenditures. To illustrate, families have to spend more money on age care for the elderly because old people tend to have a movement problem or suffer from aging diseases. To further support this statement, my family has to spend extra two thousand dollars monthly hiring a nurse to take care of my old grandmother as she has serious diabetes.

With all points above, the conclusion can be made that expanding human life by advanced medical technology is a curse because it increases both government economic burden and family financial expenditures.

**Medical technology is responsible for increasing the average life expectancy.
Do you think it is a curse or a blessing? #101039**

范文 2

In the contemporary world, advancement in medical technology allows life expansion of human beings. Many people claim that this is beneficial as it enables individuals to experience more precious moments. Personally speaking, I believe this is disadvantageous as it adds an economic burden to both governments and families.

First and foremost, this increases the economic burden on governments as the demand for age pension will go up substantially. To elaborate, life expansion leads to the severe issue of the aging population, so it boosts the amount required of age subsidy, which the government budget cannot afford. For instance, the BBC reported that advanced medical instruments have increased the aging population by 5 million people, which forced the government to pay 3 billion dollars for age subvention. Thus, technologies for life expansion threatens government budgets.

Furthermore, medical enhancement for prolonging life expectancy makes families bear heavier economic encumbrance as the daily expenditure rises significantly. Specifically, increased longevity boosts the expense of nutrition supplies, clothing, and accommodation necessities, which will drastically push up the daily cost. Irrefutably, this is a tremendous household burden. According to the statistics of the United Nation, extending lifespan increased the family's daily outlay by 30%, and over 50 thousand households in America complained about their insufficient income for such a burden. Hence, life extension overloads family.

By and large, medical improvements for life expansion is detrimental as it makes both governments and households bear enormous economic burden.

**Medical technology is responsible for increasing the average life expectancy.
Do you think it is a curse or a blessing? #101039**

范文 3

There is no doubt that advanced medical technology has expanded the human's lifespan. Some people argue that this phenomenon results in negative effects on society whereas others state it brings benefits. I strongly believe that the expansion of the human's lifespan caused by advanced medical technology is a curse, which can be supported by the reasons as follows.

The first reason is that the expansion of human lifespan owing to medical technology exacerbates the shortage of resources supply. Specifically, since advanced technology expands human's life, the global population will increase dramatically, so more resources are needed to supply the expanding global population. This can be supported by my own experience that the food supply in my home country has fallen by 20% due to the impact of the expansion of its residents' lifespan.

On the other hand, the second reason is that the expansion of a human's lifespan caused by advanced medical technology increases the governments' financial burden. This is because governments need to spend more money on pension welfare to support the living of the elderly as they live longer. This can be supported by a recent study conducted by Oxford University that the British government's budget on pension has increased significantly by 80% as the average lifespan of British residents has risen by 2 years.

With all the points above, the conclusion can be drawn that the expansion of the human's lifespan enabled by advanced technology is a curse because it exacerbates the shortage of resources and increases the governments' financial burden.

23. 体验式学习在学校有无好处 #101040

Some people point that experiential learning (i.e. learning by doing it) can work well in formal education. However, others think a traditional form of teaching is the best. Do you think experiential learning is beneficial in high schools or colleges? #101040

范文 1

There is no doubt that experiential learning becomes increasingly popular in schools. Some people state that experiential learning can work well in formal education whereas others argue that a traditional form of teaching is the best. I strongly believe that experiential learning is beneficial in high schools and colleges, which can be supported by the reasons as follows.

The first reason is that experiential learning helps students to acquire and memorize knowledge more easily because students can understand concepts by conducting experiments. Specifically, conducting hands-on experiments and watching the real process of experiments by themselves enhance students' memory and interpretation of the knowledge. This can be supported by my own experience that I could memorize knowledge by doing experiments more profoundly compared with just learning theories in books.

On the other hand, experiential learning is helpful for students to develop practical skills. Explicitly, with the opportunity to apply concepts in textbooks in real cases, practical experience can be learned and built on to cultivate pragmatic techniques, such as interpersonal skills. This can be supported by a recent study conducted by Oxford University that 90% of students who graduate from experiential learning programs show a better performance in practical skills compared with their peers.

With all the points above, the conclusion can be drawn that experiential learning is beneficial in high schools and colleges because it helps students to memorize knowledge and acquire practical skills.

Some people point that experiential learning (i.e. learning by doing it) can work well in formal education. However, others think a traditional form of teaching is the best. Do you think experiential learning is beneficial in high schools or colleges? #101040

范文 2

There is a heated debate about experiential learning and formal education. Some people argue that experiential learning is beneficial whereas others disagree. Personally speaking, experiential learning can work effectively in high school or college, which can be supported as follows.

The most important reason is that learning by doing helps people gain more hands-on experience to acquire practical methods, which can be applied in formal education. Such approaches edlearned from real cases offer more referential value for students so that they can use these techniques to study. Specifically, these methodologies can be obtained from projects, site visits, and school-provisioned internships. For example, I learned how to construct proposals to present my research and analysis during my school internships by interacting with industry personnel and gained practical skills to help to learn.

On the other hand, experiential learning helps people improve their communication skills. To elaborate, learning by doing provides people with opportunities to socialize during school and express their ideas with others, such as doing a group project. Therefore, people can find out their weaknesses during interpersonal interaction and hence improve themselves after reflecting on their performance. For example, during the group assignment, I found I was not good at communicating with others as I was so nervous to express my ideas. To overcome my weakness, I developed initiatives to encourage myself to talk to others and build my confidence.

In conclusion, experiential learning can work well in formal education because it can help people gain more practical skills and enhance communication techniques. In this regard, experiential learning can be incorporated into formal education.

24. 理科比文科更重要 #101041

Some people argue that science is more important than the arts. What is your opinion? #101041

范文 1

There is a controversy about whether science is more important than art. Some people argue that science is more important whereas others disagree. Personally speaking, science is as important as art because they both bring benefits to society, which can be supported as follows.

Firstly, learning science enhances people's logical thinking. To be more specific, science courses such as mathematics and biology are studying the rules in nature which is based on strict logic structure, so studying science facilitates people to think logically and explore the laws of unknowns in society. For example, I learned that we should first find the root causes of the problem and then reason solutions logically in order to get strong evidence of unknowns when doing experiments after I studied mathematics at the university last year.

On the other hand, art stimulates people's creativity and produces more works for society. To elaborate, arts, such as painting and music, sparkle people's curiosity and imagination because people develop their aesthetic appreciation and inspiration when drawing or imagine a scene in their mind or when listening to a piece of music. Such activities foster innovative thinking and encourage the creation of artworks, enriching society and culture. For instance, I gained a creative idea when I listened to a song called 'Burning' last year and I wrote a fiction based on the lyrics of this song and posted it online.

In conclusion, science and art are equally important for society because people can learn logical thinking from science and also enhance creativity and produce artworks from studying arts.

25. 家长需要为孩子的行为负法律责任吗 #101042

**Should parents be held legally responsible for the actions of their children?
Do you agree with this opinion? Support your position with your study,
experience, or observations. #101042**

范文 1

There is no doubt that parents should be responsible for taking care for their children. Some people argue that parents should shoulder the responsibility for the actions of their children whereas others disagree. I strongly believe that parents should be held legally responsible for the actions of their children, which can be supported by the reasons as follows.

The first reason is that how children's behavior is directly influenced by their parents. Specifically, children's misconduct or illegal behaviors are not the faults of themselves but the faults of their parents who fail to instruct their children to identify what is right or wrong, since children have yet to establish a mature judgment. This can be established by my observations that some of my friends conducted steal simply because their parents never told them such behaviors were illegal.

On the other hand, the second reason is that parents held legally responsible for their children's actions enforces them to exercise their duty of supervision. This is because parents will educate their children to establish a correct code of morality and to conduct legally compliant behaviors, in order to avoid punishments by law. This can be supported by my own experience that I always supervise my children's actions because I do not want to be penalized by the legislation.

With all the points above, the conclusion can be drawn that parents should be held legally responsible for the actions of their children because children's actions are directly influenced by their parents and this legal responsibility enforces them to exercise their duty of supervision.

26. 学校扣迟交作业学生的分数 #101043

Some universities deduct students' work if the assignment is given late. What is your opinion and suggest some alternative actions? #101043

范文 1

There is no doubt that some universities deduct students' work if their assignment is given late. Some people state that this regulation is beneficial to students' study whereas others disagree. I strongly believe that deducting students' work if the assignment is given late has a positive effect on their study.

The reason why deducting students' work if their assignment is overdue is beneficial to students is that it helps to improve students' time management. Specifically, students are forced to be punctual in order to avoid punishment, so students start to develop an awareness of time and punctuality. For example, I have enhanced my time management skills during my university time when I tried to avoid my school's restrict punishments on students' work in terms of late submissions.

As for the alternative action, universities should help students make a staged timetable for the progress of their assignment. This is reasonable because a staged timetable can remind them how much time they will need to complete their work, thus avoid missing deadlines. This can be supported by a recent report conducted by Oxford University that students who make a staged timetable for their work are 80% less likely to submit their assignments late compared to their classmates who do not.

With all the points above, the conclusion can be drawn that deducting students' work if an assignment is given late is beneficial to students because it improves students' time management. In addition, an alternative action to avoid submitting assignments late is to make a staged timetable.

Some universities deduct students' work if the assignment is given late. What is your opinion and suggest some alternative actions? #101043

范文 2

There is no doubt that some universities deduct students' work if the assignment is given late. Some people point out that this policy is beneficial to students, whereas others disagree. Personally speaking, I strongly believe that deducting student's work if it is submitted after the deadline can bring positive effects on students.

The first and most important reason for the belief is that it can enforce students to improve their time management skills, which is obvious because students would develop an awareness of punctuality in order to avoid punishment. To further support my point, I have enhanced my time management skills during my university, so I won't be affected by strict policy towards late submission.

On the other hand, some alternative actions are suggested on top of this policy. For example, universities can send out reminders to students who have deadlines coming. This suggestion is reasonable as some students might mix up dates when they are working on multiple assignments at the same time, which can be established by a recent study from Oxford University stating that 76% of students tend to submit their assignments on time with email reminders.

With all the points above, the conclusion can be made that mark deduction for late submission can bring benefits to students because it encourages that students to practice their time management skills, and universities can send reminders to students in case of mix up.

27. 兼顾工作和学习 #101044

In order to study effectively, it requires comfort, peace, and time. So it is impossible for a student to combine learning and employment at the same time because one distracts the other. Is it realistic to combine them at the same time in our life today? Support your opinion with examples. #101044

范文 1

There is no doubt that the study needs time, peace, and comfort while employment needs the same thing. Some people state that it is impossible to combine those two because one distracts one another whereas others disagree. I strongly believe that combining study with employment is realistic in our life, which can be supported by the reasons as follows.

The first reason is that individuals can combine study with employment by making use of the time saved by using high-tech equipment. Specifically, employees' working efficiency has been significantly improved in recent years, which allows them to have more time to study after completing their jobs early. This can be supported by my own experience that I can study in the afternoon even during working hours because I can finish my works in the morning owing to high-tech tools.

On the other hand, the second reason why combining study with employment is realistic is that there are various online courses available that provide high flexibility for employees in terms of their arrangements. Consequently, employees can study at night or during weekends without distracting their jobs during working hours. This can be supported by a recent report conducted by Oxford University that 60% of the British employees succeed to make a balance between study and employment by attending online courses at night.

With all the points above, the conclusion can be drawn that combining study with employment is realistic because students can conduct jobs in their holidays and employees can study through online courses.

In order to study effectively, it requires comfort, peace, and time. So it is impossible for a student to combine learning and employment at the same time because one distracts the other. Is it realistic to combine them at the same time in our life today? Support your opinion with examples. #101044

范文 2

Since both study and employment need time, peace, and comfort, whether it is possible to combine those two has become a heated controversy. Some people believe that it is realistic, whereas opponents concern that it is impossible to combine them. From my perspective, it is realistic in our life today, which can be supported by the following reasons.

It is realistic that individuals can combine study and work because the relationship between study and employment can be mutually beneficial. To be specific, while study enables people to improve their performance in the workplace because school learning provides people with the background knowledge of their working tasks, employment empowers people to deepen their understanding of school knowledge through real work practice. For example, after I did a part-time job in computing, I improved my scores with the help of my real work experience and I also enhanced my job performance by using the knowledge from the study.

Secondly, another compelling reason for my belief is that modern advanced technology empowers people the ability of multitasking and makes the combination of work and study a reality. To elaborate, developed technology can help people save plenty of time and energy, which indicates people can leave more time and energy to do their jobs and study tasks. For example, the Internet enables people to access reading materials easily so that it is not necessary for people to waste time gathering material and devices for lecture recording to empower students to study in any place so that they do not have to spend time commuting. Therefore, modern advanced technology enables people to work and study simultaneously.

In conclusion, it is realistic to combine employment and study because they are mutually beneficial, and modern advanced technology empowers individuals to work and study simultaneously.

In order to study effectively, it requires comfort, peace, and time. So it is impossible for a student to combine learning and employment at the same time because one distracts the other. Is it realistic to combine them at the same time in our life today? Support your opinion with examples. #101044

范文 3

The topic of whether students can study and work at the same time has sparked heated debate. Some people argue that it is possible to combine both, while others disagree. Personally speaking, it is impossible for a student to combine learning and employment at the same time, which can be supported as follows.

First and foremost, it is argued that students have limited time and energy, so it is unrealistic to achieve learning and employment at the same time. To be more specific, students have to spend a large amount of time and make great efforts in their studies nowadays, which means they leave little time and energy for employment. This can be supported by a recent study of Oxford University which stated that more than 82% of students in universities expressed that they don't have enough time and energy to combine learning and working simultaneously.

Moreover, students may have high mental pressure if they combine studying and working at the same time. Indeed, students already have to face fierce competition in schools recently and they have to try to fit in more regulations in the workplace, so they may acquire a mental burden in this process. This can be established by my own experience that I took high pressure and always feel depressed when I got a part-time job in an accounting firm in the second year of university.

With all points above, the conclusion can be drawn that it is unrealistic to combine both work and study because of students' limited time and the risk of mental stress. In this regard, students may have to choose between learning and employment.

28. 音乐帮助学习吗 #101047

Some people indicate that certain kind of music can promote learning for young children, while many researches showed that results are mixed. What is your opinion? Use your own experience and observation. #101047

范文 1

There is no doubt that there are different tools that can assist children with the study. Some people argue that a certain kind of music can promote learning for young children whereas others showed that results are mixed. I strongly believe that a certain kind of music helps young children to study, which are supported as follows.

The first reason is that soft music helps young children to concentrate on studying. Specifically, the lyric rhythm in soft music is beneficial to pacifying children even in a noisy environment, so they can study more concentrate on a calm mood. For example, listening to soft music could help me to concentrate on my homework even though there were some noises from the construction field when I was a young child.

On the other hand, the second reason is that a certain kind of music is helpful for children to study history, such as blues music. Explicitly, children can learn the history of African people in the lyrics of blues music, which were written by African musicians to describe their daily lives and cultures. This can be established by a recent report conducted by Oxford University that 80% of primary schools in America teach their students' blues music to help them interpret histories.

With all the points above, the conclusion can be drawn that a certain type of music can promote learning for young children as soft music helps them to concentrate on studying while blues music helps in terms of histories.

Some people indicate that certain kind of music can promote learning for young children, while many researches showed that results are mixed. What is your opinion? Use your own experience and observation. #101047

范文 2

There is no doubt that the effects of a certain kind of music on young children's learning are mixed. Some people point out that a certain kind of music can promote learning for young children, whereas others would believe that a certain kind of music cannot promote learning for young children. Personally speaking, I strongly believe that a certain kind of music can promote learning for young children, which can be supported by the reasons as follows.

The first and the most important reason for my belief is that blues music can improve students' ability to study literature, which is obvious because the words of the blues music are literary, students can learn these words from the blues music, so their ability to study literature can be improved. To further support the above statement, a recent study shows that 80% of students who listen to blues music have a better ability to study literature.

On the other hand, the second reason for this argument is that classical music can help students focus on learning, which is obvious because classical music is gentle, listening to classical music can help students stabilize their emotions, so they can focus on their studies. For example, according to a recent study, 90% of students pay more attention to learning when they listen to classical music.

With all the points above, the conclusion can be made that certain kinds of music can promote learning for young children because blues music can improve students' ability to study literature and classical music can help students focus on learning.

29. 健康饮食比锻炼更重要? #101050

A healthy diet is more important for keeping fit than exercise. To what extent do you agree with this statement? Give examples or personal experiences. #101050

范文 1

There is no doubt that many people try to keep fit by doing exercise. Some people argue that a healthy diet is indispensable for keeping fit whereas others state that doing exercise is more important. I strongly believe that a healthy diet plays a more effective role in keeping fit, which can be supported by the reasons as follows.

The foremost reason is that a healthy diet provides individuals with a comprehensive dietary structure. Specifically, a healthy food structure ensures that sufficient nutritional components are absorbed by individuals and helps them keep fit consequently. This can be supported by my own experience that the number of times I catch a cold has been decreased by 80% after I have improved my diet last year.

On the other hand, the second reason is that a healthy diet helps people limit the intake of fat which is a risk factor for chronic diseases. Explicitly, a healthy diet serves to address the root cause of many diseases, such as liver and stomach diseases, by avoiding excessive intake of unhealthy substances. This can be supported by a recent report conducted by Oxford University that individuals who have a healthy diet are 80% less likely to suffer from chronic diseases than those who have not.

With all the points above, the conclusion can be drawn that a healthy diet is more effective for keeping fit because it provides a comprehensive dietary structure and limits the intake of fat.

A healthy diet is more important for keeping fit than exercise. To what extent do you agree with this statement? Give examples or personal experiences.
#101050

范文 2

There is a controversy about the methods to stay fit. Some people argue that doing exercise is more important to stay slim whereas others disagree. Personally speaking, doing exercise is more important for keeping fit than on a healthy diet.

On one hand, exercising helps to reduce stress and maintain mental health. To illustrate, physical activities can help distract people's mind from anxious thoughts because people are focusing on physical activities rather than thinking of stressful events when they are doing exercise. With the relief of mental stress and tension, people can maintain a healthy mental status and stay happy. For example, after I went to a yoga class, I felt relaxed because I concentrated on trying to get a yoga posture right when doing yoga instead of stressful things.

On the other hand, exercise boosts individuals' immune systems. To be more specific, doing exercise increases the number of antibodies and white blood cells that are critical components of a body's immune system that fight off diseases, which reduces the chance of getting a cold and protects people from infectious diseases. For example, I used to catch a cold every winter, but I never got the flu in winter ever since I started exercising regularly.

In conclusion, physical exercise is more crucial because doing exercise can help to manage stress and improve the immune system. In this regard, exercise should be advocated.

30. 哪种学习资源最靠谱 #101052

Students can obtain information on academic subjects online, the printed books and articles, and discussion with their teachers and their peers. Which one is the most reliable source? #101052

范文 1

There is no doubt that students can obtain information on academic knowledge from different sources, such as from online, printed books, or discussion with peers. Some people argue that the information on academic knowledge from printed books is the most reliable whereas others disagree. I strongly believe that printed books are the most reliable source of academic knowledge, which can be supported by the reasons as follows.

The first reason is that printed books are professional because they are written by experts. Specifically, information from academic knowledge in printed books is admitted by the academic world and only those with sufficient knowledge are able to write books. This can be supported by my own experience that I was asked to only take the information from the printed books as references when I wrote academic reports in food science because printed books were written by authoritative experts in that field.

On the other hand, the second reason is that printed books have a lower level of error rate than other sources because they are carefully proofread before publishing. Consequently, printed books are the most reliable sources compared to others in terms of accuracy. This can be supported by a recent report conducted by Oxford University that the error rate for printed books is the lowest among all types of resources due to proofreading.

With all the points above, the conclusion can be drawn that printed books are the most reliable sources of academic information because they are professional and have a low level of error rate.

Students can obtain information on academic subjects from online, the printed books and articles, and discussion with their teachers and their peers. Which one is the most reliable source? #101052

范文 2

There is a controversy about the sources of information. Some people believe that information online is the most reliable while others disagree. Personally speaking, printed books and articles are considered the most reliable sources, which can be supported as follows.

On one hand, there is no doubt that the published books are the most credible in terms of the depth of review. To illustrate, the contents in printed books must be strictly proofread multiple times and approved by publishers before publishing. As a result, the accountability of information in the books is verified and any mistakes are also rectified, making sure that the information in published books is accurate. For example, I wrote a book in China which was revised by other experts in the same field 20 times during the editing process and I could not publish it until there are no mistakes.

On the other hand, the printed books are most reliable on the basis that cited sources of such materials are credible. To be more specific, books that are published must have references and credible sources to back up their information, which are based on primary or secondary research resources from leading institutions, like NASA. For example, a report published by The Economics stated that 89% of published books had credible and factual sources from the official website and institutional sites.

In conclusion, the printed books are the most reliable sources for students to obtain information on academic subjects because of their review process and credibility of cited sources. In this regard, students should use printed articles as materials for study.

31. 广告的优点缺点 #101053

Advertising may make people buy something they don't need or cannot afford, but also they can convey information to increase their life quality.

What is your opinion? #101053

范文 1

There is a controversy about the function of advertisement. Whether it is beneficial or not attracts public attention. Personally speaking, advertising makes people buy something they don't need or cannot afford, but it also increases people's life quality.

Firstly, an advertisement may get customers to buy unnecessary products or those they cannot afford. To illustrate, the advertisers may use advertising tricks to trigger customers to purchase their products on an impulse. Impulse buying occurs especially when the customers are targeted by the advertisers. Consequently, the products bought may become redundant if the customers do not need them, or even the purchase may impose a financial burden on the customers if they cannot afford the high price. For example, with one at home, I still bought a juicer yesterday which lays idle now because the advertising said the store had special offers only on that day, which induced me to purchase the juicer.

On the other hand, advertising improves people's life quality by saving time and energy. To elaborate, advertisement gives customers opportunities to acquire comprehensive information about products without wasting time shopping around and asking sellers for information. Therefore, advertising improves people's life quality as customers can be well-informed easily. For example, it took me one day to buy a mobile phone without seeing any advertisement because I had to go to four shops to compare each function, but I can get timely information on TV after watching the advertisement and thus make a choice within one hour.

In conclusion, advertising has limitations because consumers purchase stuff they don't need, but it can increase life quality.

32. 政府面临的最严重的问题是什么 #101055

The world's governments and organizations are facing a lot of issues. Which do you think is the most pressing problem for the inhabitants on our planet and give the solution? #101055

范文 1

There is no double that the world's government and organizations are facing many issues which became pressing problems for the inhabitants of our planet. There are serious problems on the earth such as climate change, aging, and globalization. In my opinion, I believe that the most pressing problem globally is climate change which can be supported by the following reasons.

The first and the most important reason for my belief is that climate change will reduce biodiversity. It is obvious that global warming not only changed human's living conditions but also destroyed the animals living environment. The statistics showed that in China, more than 100 species are endangered due to the temperature rising that damaged their living condition.

However, the main solution to deal with climate change is to use clean energy such as solar energy. The reason is that solar power is sustainable energy which can reduce greenhouse gases as well as protect the earth's natural resources. It can be proved that Melbourne is encouraged to utilize solar power in public transportation which will reduce carbon dioxide emissions.

With all the points above, the conclusion can be made that I strongly believe that climate change is the most important problem in society that many governments are facing, however, we should encourage societies to use solar energy to replace the fossil fuel that to improve this situation.

The world's governments and organizations are facing a lot of issues. Which do you think is the most pressing problem for the inhabitants on our planet and give the solution? #101055

范文 2

There is no doubt that the world's governments and organizations are facing a lot of issues. Some people argue that global warming is the most pressing problem for the inhabitants whereas others disagree. I strongly believe that global warming is the most serious problem that governments need to tackle.

The reason why global warming is the most pressing problem for the inhabitants is that it can result in a decline in food supply. Specifically, the rising temperature caused by global warming exacerbates droughts in the world, making the increasing area of farmlands unsuitable for growing food. As a result, food supply decreases with the reduction in agricultural productivity. This can be supported by the example of my home country, China. The food storage in China has decreased by 30% since 1990 due to global warming.

As for the solution, governments should lay down environmental legislation to limit carbon emissions from companies. To be more specific, the environmental laws enforce companies to install facilities to improve the efficiency of combustion to decrease the usage of carbon, otherwise, they cannot get permits to run their business. This can be established by the example of Australia that global warming in this country has been largely alleviated after a series of environmental laws have been enacted in 2005.

With all the points above, the conclusion can be drawn that global warming is the most pressing problem for the inhabitants because it decreases food supply and an effective solution is to lay down environmental laws to limit the carbon emissions from companies.

The world's governments and organizations are facing a lot of issues. Which do you think is the most pressing problem for the inhabitants on our planet and give the solution? #101055

范文 3

There is no doubt that the world's governments and organizations are facing a lot of issues. Personally speaking, the most pressing problem for the habitats on our planet is air pollution, and the most effective solution is to exploit new cleaner energy, which can be supported by the reason as follows.

The most important reason for my belief is that air pollution can seriously affect people's health, which is obvious because the dirty air we breathe every day can cause a lot of chronic diseases. These chronic diseases perplex the whole public and the nation. To further support the above statement, research in China showed that, the risk of getting lung cancer in areas with heavy air pollution is 20% higher than in areas with good air quality.

To solve this issue, the most effective way is to develop cleaner energy, which is reasonable because the most prevailing energy source today is a fossil fuel, and the combustion of fossil fuels produces air pollution such as carbon dioxide, nitrogen oxides, and sulfur dioxide. Therefore, if cleaner alternatives can be developed and utilized, the issue of air pollution can be addressed to a large degree. This can be established by a recent study that if fossil fuel can be replaced by cleaner energy sources, the air pollution index in countries with bad air quality will be 50% lower.

In conclusion, considering its damage to people's physical health, I reckon air pollution is the most urgent issue currently, and the most efficient solution is clean energy utilization to fulfill carbon discharges reduction.

33. 学校是否应该按照学生能力分组教学？ #101057

Some people think schools should group students according to their academic abilities while others think students can achieve better performance in mixed groups. Discuss both opinions and give your own opinion. #101057

范文 1

There is a controversy regarding student grouping in school. Some people think that students should be grouped by academic abilities while others disagree. Personally speaking, students can learn from each other in both mixed groups and groups that have students with similar academic abilities, which can be supported as follows.

On one hand, there is no doubt that mixed-ability grouping can facilitate all students in the group to progress together. To illustrate, higher-ability students can develop a deeper understanding of knowledge by teaching others in the group, and meanwhile, lower-ability students benefit from the support of peer tutoring because students are able to explain concepts in a way that their peers can easily understand, which helps all students in mixed groups achieve better performance. For example, a study of Oxford University showed that the grades of each student increased by 10% after dividing students with different abilities into groups last year.

On the other hand, ability-based grouping enhances students' learning efficiency by synchronizing their learning speeds. To be more specific, students in their designated group can learn at their speed, regardless of the rest of the class because teachers tailor activities and assignments in accordance with students' level of ability so that fast learners are not held back, and slow students are not rushed. For example, I used to get bored, waiting for other students' progress, but after I was assigned to the high-score group, our group could go forward based on our learning progress without waiting for the slower learners.

In conclusion, both mixed-ability groups and ability-based groupings can be adopted because a mixed-ability group can promote common progress within the group and an ability-based group can allow students to learn at the same speed.

34. 教育和医疗，哪一个更值得政府投入更多资金 #101059

As national services, which one deserves to receive more financial support, education, or health? #101059

范文 1

There is no doubt that many national services need financial support from governments. Some people argue that education deserves to receive more financial support whereas others state that health should be focused on. I strongly believe that education deserves to receive more financial support, which can be justified by the reasons as follows.

The foremost reason is that investment in education makes education more accessible. To be more specific, investment in education helps to decrease university tuition fees, thus more people can attend higher-level education owing to the lowered financial barriers. This can be supported by my own experience that I was able to enter university after the Chinese government increased its budget on educational funding in 2010, which I could not afford previously.

On the other hand, the second reason is that investing more capital in education accelerates the country's technological progress. Specifically, investment in education is conducive to cultivating more scientific and technology-related talents who are the key to promoting the advancement of technology. This can be established by a recent report conducted by Peking University that the international ranking of China's technology level has risen from the 10th to the 2nd place owing to the expanded investment in the country's tertiary education.

With all the points above, education deserves to receive more financial support because it makes education widely accessible and accelerates the country's technology development.

35. 集中考试和不停考试哪个好 #101061

There are different assessment systems, putting all exams at the end of the term, or assignments and exams being spread out throughout the semester. What are the advantages and disadvantages of each system? Which system do you prefer? #101061

范文 1

There is no doubt that there are different assessment systems, such as putting all exams at the end of term and exams being divided into different stages. I strongly prefer the exams being spread out throughout the semester while both of these two types of assessment systems have their advantages and disadvantages, which are described as follows.

In terms of exams spreading out throughout the semester, the advantage is that this assessment system helps students evaluate their study stage by stage. Consequently, students can be aware of their weaknesses at each stage and correct them before proceeding to the next stage of their study. However, the disadvantage of this assessment system is that it is a waste of educational resources because university teachers have to spend a lot of time preparing for a large number of examinations, which should be effectively allocated to other aspects instead to improve students' study such as providing more numbers of tutorials.

On the other hand, regarding putting all exams at the end of the term, the benefit is that such an assessment system is efficient because it allows institutions to examine a large number of examinees together within an extremely short time with just one exam applied. Nevertheless, the disadvantage is that this assessment system cannot assess students' study comprehensively since limited theories and concepts can be tested, which fails to comprehensively evaluate students' problem-solving and communication skills.

With all the points above, the conclusion can be drawn that putting all exams at the end of the term and exams being spread out throughout the semester have their advantages and disadvantages. However, I prefer the latter one owing to its contribution to students' studies.

36. 搬到了大城市居住，好不好 #101062**People are moving from rural areas to big cities. Is it good or bad? #101062****范文 1**

There is no doubt that there is an increasing number of people moving from rural areas to big cities. Some people argue that this phenomenon has some positive effects on society whereas others disagree. I strongly believe that people moving from rural areas to big cities is bad, which can be supported by the reason as follows.

The foremost reason is that urbanization increases the strain on traffic in a growing number of private cars, putting great pressure on downtown traffic which causes severe traffic jams. This can be supported by my own experience that the number of traffic jams I have experienced has grown by 5 folds due to the movement of rural residents into the cities.

On the other hand, the second reason is that urbanization has a side effect on agriculture worldwide. Specifically, more and more farmlands are left unattended and become deserted consequently, as a labor force in rural areas moves into big cities. This can be supported by a recent report conducted by Peking University that there has been a significant reduction in China's food supply as 30% of the rural population has moved into metropolitan cities since 1980.

With all the points above, the conclusion can be drawn that urbanization is bad because it imposes a burden on city traffic and results in a decline in the food supply.

People are moving from rural areas to big cities. Is it good or bad? #101062

范文 2

There is a controversy about rural-urban migration. Some people argue that it is a positive trend while others disagree. Personally speaking, it is good for people to move from rural areas to big cities to some extent, but the disadvantages cannot be overlooked either.

On one hand, the reason to advocate people to migrate from rural areas to big cities is that such migration provides labor for urban development. Specifically, big cities have an increasing demand for labor force due to urbanization which promotes the expansion of cities and industries, so the migration from rural areas to city solves the problem of labor shortage in cities and facilitates the progress of urban development. For instance, a study of Oxford University stated that the labor force in the city increased by 40% after 7000 people moved from rural areas to big cities in America in 2003.

On the other hand, the problem of people moving from rural areas to big cities is regarding the reduction of the food supply. To be more specific, rural people going to cities causes no one to farm in the countryside as people in rural areas normally engage in growing crops and supply food for the people living in the city, so this migration causes a decreasing food production. For example, based on a report of 'The Economics', the supply of food decreased by 70% after 8000 rural people went to cities in China in 2002.

In conclusion, people moving from rural to the city can be both positive and negative because it offers sufficient labor supply for urbanization whereas it can also cause a decrease in the food supply.

37. 医生网络沟通好不好 #101063

Now doctors can talk to patients by using internet-based communication in the office. Discuss the advantages and disadvantages. #101063

范文 1

There is no doubt that doctors can talk to patients using internet-based communication in the office. Some people argue that this new chatting method is beneficial whereas others disagree. I strongly believe that doctors using Internet-based communication to talk to their patients has both advantages and disadvantages, which can be supported by the reasons as follows.

The foremost advantage is that using internet-based communication largely decreases the time patients spend on seeing a doctor. Explicitly, patients can register and wait for medical consultations online at home, so they can save the time spent on traveling to hospitals, which can be allocated to other more valuable tasks. This can be supported by the case of the hospital in my community, which has successfully decreased patients' waiting time after the hospital started to use an internet-based communication platform.

On the other hand, the disadvantage is that Internet-based communication increases the risk of misdiagnosis. Specifically, without physically examining the patients, the doctor can only make judgments based on the patient's verbal description which is not precise most of the time. This can be supported by a recent report conducted by Peking University that the rate of misdiagnosis has increased by 30% after the Internet-based communication system was introduced to the Chinses hospitals.

With all the points above, the conclusion can be drawn that doctors using Internet-based communication to talk to their patients has both advantages and disadvantages because it saves the patients' waiting time but increases the risk of misdiagnosis.

Now doctors can talk to patients by using internet-based communication in the office. Discuss the advantages and disadvantages. #101063

范文 2

There is a controversy about the means of communication between doctors and patients. Some people think that doctors communicate with their patients through computers is beneficial. Personally speaking, internet-based communication between doctors and patients has advantages. However, the disadvantages cannot be overlooked either.

On one hand, the key benefit is that doctors talking to patients by using internet-based communication in the office can increase accessibility for disabled patients. To elaborate, it is difficult for people who have a disability in the movement to see a doctor in person because they are confined to their bed and unable to walk on their own, so online consultation allows patients to easily get access to healthcare professionals without physical assistance. For example, it was impossible for my paralyzed sister Merry to attend a face-to-face appointment with her doctor, but she could seek advice directly just at home after computer-based consultation was implemented.

On the other hand, doctors assess patients through internet-based communication increases the risk of error in clinical services. To illustrate, virtual clinical treatment decreases interactions between patients and doctors such as listening to the heartbeat or taking X-ray, which leads to a low quality of health informatic records because doctors cannot collect sufficient evidence to diagnose a disease. Therefore, doctors may run the risk of faulty clinical treatment. For example, one report of Oxford University stated that the rate of misdiagnosis increased by 50% in China in 2002 after the implementation of online clinical treatments.

In conclusion, doctors consulting with patients based on internet-based communication have both advantages and disadvantages as it increases accessibility for disabled patients whereas it may also cause misdiagnosis.

38. 流行音乐的大学学位 #101064

Pop music should have a university degree. Do you agree or disagree?
#101064

范文 1

There is no doubt that there is a large number of universities starting to set a bachelor's degree in culture. Some people argue that pop culture should have a university degree whereas others disagree. I strongly believe that universities should not set a degree in pop culture, which can be supported by the reasons as follows.

The foremost reason is that setting a university degree for pop culture overlaps with degrees of other types of culture that are already established. Specifically, the core of pop culture is a mixture of elements from other cultures, such as traditional culture. As a result, the content of the courses in pop culture will be similar to other cultures' courses, leading to a waste of educational resources. This can be supported by my own experience in my home university that I find that the subjects offered by the degree in a traditional culture highly overlap with those in the pop culture degree.

On the other hand, the second reason is that setting a university degree in pop culture limits its diversity. This is because university education applies a universal standard, which prevents students from generating innovative and intriguing ideas in pop culture, such as pop music. This can be supported by a recent study conducted by Oxford University that 50% of the newly released pop music by bachelor students is highly similar in style with each other.

With all the points above, the conclusion can be drawn that pop culture should not have a university degree because it overlaps with degrees in other cultures and limits the diversity of pop culture.

39. 平价公交的优点 #101065

What are the advantages of cheaper public transportation? What will it cause to achieve it? #101065

范文 1

There is no doubt that the cost of public transportation has decreased significantly during the last century. Some people argue that cheaper public transportation leads to some advantages whereas others disagree. I strongly believe that there is an advantage of cheaper public transportation, which is discussed as follows as well as the effect it causes.

The advantage of cheaper public transportation is that it helps to relieve global warming by reducing emissions of carbon dioxide. Specifically, cheaper public transportation leads to individuals' increasing will to take public transportation instead of driving a private car which is the main source of greenhouse gas emission. This can be supported by the example of my home city, Chengdu, in which the carbon emissions have been reduced by 50% since the government reduced the cost of public transportation by 30% in 2012.

On the other hand, cheaper public transportation causes a higher unemployment rate in the car manufacturing industry. This is because the demand for a private car decreases as public transportation becomes cheaper, so workers in the car industry will lose their jobs due to the decline of private car sales. This can be supported by a recent report conducted by Oxford University that the unemployment rate of the car manufacturing industry has increased by 50% after the British government decreased the cost of public transportation by 30% in 2006.

With all the points above, the conclusion can be drawn that the advantage of cheaper public transportation is that it helps to relieve global warming while the decreasing price causes a higher unemployment rate in the car manufacturing industry.

What are the advantages of cheaper public transportation? What will it cause to achieve it? #101065

范文 2

There is no doubt cheaper public transportation has many advantages. Personally speaking, I strongly believe that the lower price of public transportation can benefit public traffic, which can be supported by the following reasons.

The first and most important benefit of cheaper public transportation is that it can reduce traffic congestion. This is obvious because public transportation will be chosen by more people when they travel as the price becomes cheaper and it can carry more passengers per time than private cars, so it will reduce the pressure of traffic, especially during busy hours. To further support the statement, a recent report by Harvard University stated that the government of the United States had devoted about 1 billion dollars to creating networks of public transportation, which on average reduce traffic congestion in busy areas by 15%.

On the other hand, the achievement of cheaper public transportation will increase the financial burden of the government. To be more specific, when public transportation becomes cheaper, the government has to devote more funding to compensate the public transportation, which results in more pressure on the government. This can be established by a recent report of Oxford University stated that the price of English public transportation has decreased by 10%, which means the British Government has to devote about 50 million pounds to compensate for the funding and this is very high pressure for the government.

With all the points above, the conclusion can be made that cheaper public transportation can ease traffic pressure. Meanwhile, it will increase the financial pressure on governments. In order to further address this issue, public awareness should be raised to improve the situation.

40. 你国家的教育系统 #101068

What do you think are the strengths and weakness of the education system in your country. Use your own experience to support your idea. #101067

范文 1

There is a controversy about the strengths and weaknesses of the Chinese education system. In China, schools, and teachers weighing a lot on final exams, which not only has benefits but also has weaknesses we cannot ignore. In this essay, the strengths of weighing highly on final exams will first be mentioned followed by weaknesses.

First and foremost, weighing highly on final exams could reinforce students' knowledge systematically, which is obviously because schools' and teachers' value on final exam marks could encourage students to review all their principles and concepts as a whole in an intensive period. Hence, they could be able to connect these concepts under a more systematic structure which could set a solid foundation of their knowledge. Given my personal experience as an example, I could still remember vividly the reactions in chemistry after graduate 10 years because I have put a lot of effort into studying those during my final exam period.

However, weighing too much on final exams also has weaknesses as it will reduce the efficiency of student's study during the semester weeks, which is reasonable because weighing heavily only on final assessment gives little pressure for students throughout the normal teaching weeks. Thus, students will feel less motivated for their studies. For instance, my friend Eva always outperforms in the final exams but feels a lack of motivation to study because there is no compulsory assessment in the daily study.

In conclusion, the Chinese education system has the feature of weighing heavily on final exams. It has the strength to reinforce the foundation knowledge of students, but it will reduce the efficiency of student's study throughout the semester.

What do you think are the strengths and weaknesses of the education system in your country. Use your own experience to support your idea. #101067

范文 2

There is no doubt that our country's education system has various strengths and weaknesses, which has sparked wide-spread attention and prevalent debate. Personally speaking, I strongly believe that one of the predominant features of the Chinese education system is being exam-oriented, and this essay will discuss its strength and weakness as follows.

Firstly, the strength of the system is that our students can gain a solid learning result through the current exam-oriented educational system. To be more specific, students have weekly and monthly exams to test their academic performance and a significant amount of homework to consolidate their learning results. For example, I graduated from high school with a high-distinction level and applied Peking university which is because the exam-oriented system brought me an excellent learning achievement.

On the other hand, the weakness of the Chinese education system is that students suffer an extremely overloaded study pressure, which has a negative impact on their mental health. To be more explicit, students have to sit in front of the desk for a very long time because of the heavy workload, which makes them feel exhausted and thus become depressed. For instance, according to a survey of Fudan University, 50% of Chinese students are suffering from depression and anxiety because of the endless and intensive learning schedules.

To sum up, having considered all the points above, I am surely convinced that the Chinese education system has strengths and weaknesses, which is the unique learning method and extreme study pressure.

41. 富国帮穷国 #101070

**Wealthy nations are required to share their wealth with poorer countries.
What is your opinion? #101070**

范文 1

It is convincible that there is a huge disproportion in terms of wealth and resources across different countries. Some people may argue that strong economies should aid the poor countries. I think wealthy nations should not share their wealth with poorer countries, and the essay will elaborate on the main reasons.

First and foremost, giving poor countries money without teaching them how to make money on their own will demotivate less developed countries to improve their situation. In particular, the governments of poorer nations would wait for other countries' donations and become unwilling to put their effort into enhancing their economies, which will create a vicious circle. For example, the unemployment rate in South Africa has been increasing over the past few years, because people have become too lazy to work when they can get free money from developed countries.

In addition, it is unfair for the poor citizen of the wealthy nations that also need financial help. To elaborate, there is a big gap between poor and rich families in their own countries, so people in rich countries would love to shorten the financial distance between the rich and the poor, which requires a huge amount of money. For example, 80% of the people in America want to further develop infrastructure in rural areas to help poor people to get a better life in their country.

In conclusion, strong economies should not aid the poor countries because it will demotivate those poor countries and it's unfair to the poor people in rich countries.

42. 学校应该教打字还是手写 #101072

Some schools believe that children should learn typing rather than good handwriting. How far do you agree with that? Show reasons with your experience. #101072

范文 1

There is no doubt that some schools believe that children should learn typing rather than good handwriting. Some people agree with this opinion whereas others disagree. I strongly believe that typing is more important in modern society, which can be supported by the reasons as follows.

First and foremost, typing improves learning productivity. To be more specific, it is faster to record thoughts and complete assignments with the help of a keyboard so that more time can be given to thinking rather than typing. In addition, document edition and proofreading also become effortless by typing. To further support the above statement, I preferred typing the essay when I was a student during my university time because typing is more productive for assignments, which could save me two hours.

Moreover, the second reason for this argument is that typing enhances the presentation quality of essays or papers, which is reasonable because typing words are neat and tidy. Typed words significantly improve the readability of the document and thus giving readers a better reading experience. For example, I used to achieve a higher grade if typing is applied instead of handwriting because the teacher could read the papers and understand my perspective easily.

With all the points above, the conclusion can be made that typing is more important than handwriting because typing can improve the efficiency of learning and strengthen the presentation quality of documents. In this regard, universities should advocate for more students to learn typing.

43. 流行文化的大学学位 #101076

Many universities offer degree courses in popular culture, such as popular music and video gaming. Do you think it is appropriate and give reasons to support your idea. #101076

范文 1

There is no doubt that many universities are now offering degree courses in popular culture, such as popular music and video gaming. Some people argue that it is appropriate as universities can equip students with professional skills, whereas others believe it is a waste of educational resources. From my point of view, it is suitable that universities offer degree courses in popular culture.

Firstly, it is undeniable that university degree courses give students opportunities to receive systematic and theoretical training in popular culture. To be specific, popular culture has its unique development history and characteristics, which is hard to be learned systematically through self-study, and universities can provide comprehensive learning materials for people to learn. My friend, for instance, John obtained his bachelor's degree in popular music through research on theoretical music knowledge and practicing music.

Secondly, it is conspicuous that university degree courses provide guidance for students in pursuing their careers. To illustrate, degree courses provided by universities cover almost all aspects of popular culture on basis of theoretical research and professional practice, which would cultivate essential skills when students enter a professional field in the future. For example, when I was taking the master course in video gaming, I gained game design skills to show better empathy for user experience, which made me competitive in the job market.

With all the points above, there are lots of benefits that universities provide degree courses in popular culture for students who have particular interests or pursue popular culture as their lifetime career in the future since universities are qualified of offering students professional training and comprehensive learning materials which are essential for their career development.

44. 文学是浪费时间 #101077

Works of literature are a waste of time for students today. Do you agree and use your own experience? #101077

范文 1

There has long been a controversy about whether works of literature are a waste of time for students today. Some people point out that studying literature would benefit students in the long term, while others think spending time learning literature is pointless. Personally speaking, I strongly believe that learning literature works is not a time-wasting activity, which can be supported by the reasons as follow.

The first and most important of my belief is that works of literature would promote students' creativity. To be more precise, some famous novels and poems contain lots of medieval cultural backgrounds that no longer exists, which obviously can motivate students' imagination and creativity. To further support the above statement, my own learning experience would be a persuasive example. As I read lots of stories about the French Revolution during my literature courses, I couldn't help thinking about and imaging lives in old France in the eighteenth century and starts to write my first novel about the busy life of French people at that time.

The second reason for this argument is that literature works would provide an opportunity for students to read more about their history and culture. To be more specific, lots of fiction and articles include domestic historical information and backgrounds, which enable children to learn more about things that happened in the old generations in their own countries. This statement can be established by my own experience. I learned lots of interesting historical events by learning Chinese literature during my high school study. In this case, I had a deep understanding of my own country.

In conclusion, works of literature are not a waste of time for students because they can boost children's creativity and students could learn more about their own culture by reading them.

45. 聆听者与倾诉者 #101081

In social situations, some people believe that it is better to be a good listener than a good talker. Do you agree or disagree? #101081

范文 1

There is no doubt that whether it is better to be a good listener than a good talker is becoming a popular topic in our society. Some people think being a good listener is better than be a good talker, but personally speaking, I disagree with this opinion, which can be supported by the reasons as follows.

The first reason for my belief that being a good talker can increase teams' work efficiency, which is obvious because a good talker can clearly express their ideas to colleagues, and have efficient communication with teammates, which is very helpful to quickly complete projects. This can be supported by my own experience that I'm always able to finish a project quicker with a good speaker than with a good listener. Thus, to be a good talker is greater than a good listener.

On the other hand, the other reason for my opinion is that being a good talker can make people feel comfortable during the conversation, which is reasonable because a good talker is skillful in the aspect of communication. For example, they know how to control the pace of the conversation and how to make the conversation atmosphere friendly. This can be established by a study of Oxford University which stated that 76% of people think they like to have a conversation with a good talker than a good listener as a good talker always make the conversation cordial and friendly.

In conclusion, I think it is better to be a good talker than a good listener because a good talker can improve work efficiency and make conversation friendly.

In social situations, some people believe that it is better to be a good listener than a good talker. Do you agree or disagree? #101081

范文 2

It is convincible that social life is indispensable in our daily life. In social situations, some people believe that it is better to be a good listener rather than a good talker. In my opinion, I do agree that a good listener is better off than a good talker, and the essay will elaborate on the main reasons.

First and foremost, a good listener has virtue over a good talker in terms of building up a robust relationship. To be more specific, it is vital to be an active listener to express the counterparts that you are paying attention to them and caring about them, so you can maintain a healthy connection with others if they trust you and rely on you. For example, I am always a good listener who appreciates my customers' words, so there is a firm bond between me and my clients.

In addition, an effective listener has an advantage over a good talk in respect of understanding people's ideas. Explicitly, during social situations, people communicate with each other to exchange opinions, and being a good listener can help individuals have a deep understanding of others' perspectives. For instance, a study of Oxford University stating that 80% of citizens believe that listening carefully to others can help them comprehend other persons' ideas.

In conclusion, a good listener is better off than a good talker because it can build up a robust relationship and understand each other deeply.

In social situations, some people believe that it is better to be a good listener than a good talker. Do you agree or disagree? #101081

范文 3

It is undeniable that listening and talking are two important components of social situations. Some people indicate that being a good listener is extremely important, while others claim being a good talker is more essential. Personally speaking, being a good listener is as important as being a good talker.

On one hand, being a good listener can steer conversations toward other people's interests. To elaborate, by listening, acquaintances or friends can be connected when a person's interests are valued by others and he or she would be accepted easily as other people feel their opinions are important. For example, research conducted by Howard University, it indicated that a good listener is more welcomed in a group conversation as they value ideas promoted by others. Therefore, to be a good listener is extremely necessary for social situations.

On the other hand, a good talker is the core of a great conversation. In detail, a skillful communicator can lead conversation and can guide people to exchange ideas and express their minds. Also, the skills of a good communicator has can promote a better environment where everyone finds it comfortable. For instance, I enjoy spending time with people who is talkative because when others lead the conversation, the awkward moment will disappear. Therefore, being a talker can lead to a quality conversation.

In conclusion, being a good listener is as important as being a good talker. With different personalities and different skill set, people can be a good talker to promote the conversation or people can be a great listener to steer the conversation toward other's interests.

46. 年轻人 25 岁后才准开车投票 #101085

Some people believe that young people can do things such as diving or voting until they are at least 25 years old. Discuss and give your opinion with examples. #101085

范文 1

In recent days, it has been proposed that young people are not allowed to drive and vote because they lack experience and are not responsible. As far as I am concerned, I disagree with this point of view.

First of all, young people are entitled to voting and driving even if they lack relevant experience. To be more specific, youngsters are mostly fast learners, which allows them to learn the methods of voting and driving quickly and then accumulate experience. In this case, they can vote and drive like adults. For example, a study conducted by Melbourne University has shown that young people can learn how to drive and vote at a rate which is 78% faster than older people, which helps them obtain the related experience shortly.

In addition, it is undeniable that good schooling could develop a sense of responsibility for young people to drive or vote, which is obvious because youngsters could be delivered courses associated with morality and human rights at school. In this regard, young people could recognize the significance of genuine voting and behave well on the road as drivers. For instance, one of my friends had a better understanding of reasons why citizens need to vote and also of how to vote appropriately through the relevant curriculums back in school, and now she feels responsible for her voting right and puts much weight on her decision when voting for the president.

In conclusion, youngsters should be encouraged to vote and drive as they can accumulate experience by learning fast and become responsible through a range of high quality courses at school.

47. 政府不应该承诺经济持续增长 #101098

Governments promise continuous economic growths, but it's actually an illusion. Some people think that governments should abandon this. Please talk about the validity and implications. #101098

范文 1

Whether the promise from governments for economic growth is an illusion or not attracts enormous controversies in society. Many people think that governments should abandon the promise. In my view, governments promising continuous economic growth is invalid, which brings negative implications.

First and foremost, governments' promises are invalid, and the government should abandon the promise for continuous economic growth because economic growth cannot be controlled by the government's manipulation. To be explicit, there are many other factors that can influence economic growths, such as globalization, natural disasters, and economic cycles, so it is impossible that government policies can ensure sustained economic growth, meaning it's an illusion. For example, the research from Oxford University shows that 80% of economic growth depends on the economic cycles rather than government promises.

On the other hand, the implication is that governments may lose reputation if these stated economic promises do not come true. To be specific, people may lose confidence for governments because people's expectation for economic growth was not met, and people may become disappointed, giving up their support for the governments. For instance, the statistics from Griffith University show 60% of citizens were losing confidence because people's expectations for economic growth were mismatched with the government promise.

In conclusion, governments cannot ensure economic growth because economic cycles and other factors can jointly influence economic growths, and the implication is that governments may lose reputation s the promises were not met.

Governments promise continuous economic growths, but it's actually an illusion. Some people think that governments should abandon this. Please talk about the validity and implications. #101098

范文 2

There is no doubt that governments always promise continuous economic growths. Some people point out that governments should abandon this, whereas others hold a different view. Personally speaking, I am convinced that the promise of governments about continuous economic boost is invalid, and this promise will reduce the public trust in the government.

Firstly, government guaranteeing continued economic growth is actually an illusion because the economic cycle is beyond the control of governments. To illustrate, the economy thrives and recesses based on the stages of the business cycle. Moreover, the effect of government policies on the economy is minor. Therefore, governments cannot achieve economic growth during deep recession times. For example, a study of Oxford University in 2012 states that due to the nature of the economic cycle, the governments' commitment to the sustained development of the economy is unachievable.

Additionally, the promise regarding sustained economic growth damages public trust in governments. To elaborate, governments cannot realize their promises because of various reasons. Once citizens find that the economical promise by governments turns out to be an illusion, they would no longer believe in governments' statements in other fields. For instance, research conducted by Cambridge University in 2018 found that the confidence of the citizens fell by 15% because of governments' invalid promise in the economy.

To conclude, I firmly believe that governments should not promise a sustainable economic boost because it is unrealistic. In addition, the implications of this commitment include the loss of public trust.

Governments promise continuous economic growths, but it's actually an illusion. Some people think that governments should abandon this. Please talk about the validity and implications. #101098

范文 3

It is said that governments' promise of sustained economic development is an illusion. Personally speaking, I strongly question the validity of the governments' promise of continuous economic growths, and I suggest that there will be negative impacts if they continue doing this, which will be explained by the following reasons.

The validity of governments' promises should be doubted because globalization brings uncertainty to economic development, which is out of the authority's control. To be more specific, globalization brings countries together as a global village where all nations enjoy financial benefits and shoulder financial crisis at the same time, making economic development more complicated and unpredictable. Therefore, it is difficult for governments to realize continuous economic growths, and thus they may fail to fulfill their promises. For example, a recent study from Oxford University states that 89% of sociologists think governments should abandon the promise of the economy.

Failing to achieve economic growth would increase the number of the poverty population. To be more explicit, since the failure of economic growth affects the job markets, there are not enough job opportunities provided. Many people will lose their jobs and thus cannot support family expenses, which will further increase the number of the poverty population. For instance, a study conducted by Cambridge University shows that Governments failing to achieve economic growth increased 17% poverty population in the UK.

In conclusion, I question the validity of the governments' promise of continuous economic growths because globalization brings uncertainty to economic development. Also, it can lead to the implication of an increasing number of the poverty population.

48. 人类活动导致气温上升 #101099

Lots of scientists agreed that human activities increase global temperatures. Do you agree? Please give solutions to global warming. #101099

范文 1

There is no doubt that many scientists believe that human activities increase global temperatures. Personally speaking, I agree with this statement, which can be supported by the reason as follows, and I also will provide a solution for global warming.

The reason for my belief is that too much greenhouse gas which is generated by cars has been discharged into the atmosphere, which is obvious because more and more people rely on cars when they go outside, and too much exhaust emission from cars causes an increase of temperatures. This can be supported by my own experience that I always feel warmer in cities than countryside because there are more cars in cities on the road. Thus, more cars are driven on roads can raise global temperatures.

The solution for this issue is to plant more trees especially in places where more cars are used, which is reasonable because trees can absorb greenhouse gas and produce oxygen at the same time, and oxygen is helpful for reducing the temperature. This can be established by a study by Oxford University that 76% of scientists agree that trees can absorb car emission and prevent temperature goes high by releasing oxygen. Thus, planting more trees is a good method to solve the global warming problem.

In conclusion, I agree with the scientists' opinion that global temperatures are increasing because of human activities because more people like to drive cars to go outside. The solution to this problem is planting more trees.

49. 课外活动对中小学生和大学生都很重要 #101111

It is equally important for school children and university students to be involved in extra-curricular activities as it is good for academic studies and examinations. What's your opinion? Use your expertise or examples to support it. #101111

范文 1

There is no doubt that involvement in extra-curricular activities is good for academic studies and examinations. Some people believe that it is equally important for schoolchildren and university students, whereas others claim that it exerts more negative effects. I strongly believe that both school children and university students should not participate in extra-curricular activities, which can be supported by the reasons as followed.

The first and most important reason for my belief is that extra-curricular activities would consume children's time and energy in developing their interests. It is evident because engaging in extra-curricular activities such as playing sports or studying arts would take children much time every day, which leaves only a few hours for them to focus on their interests. To further support the above statement, according to the research by RMIT University last year, 76% of school children feel stressed already after extra-curricular activities and would not have enough time to practice their hobbies.

On the other hand, the second reason for this argument is that many social activities, which are crucial for university students, would be negatively affected by the extra-curricular activities. It is reasonable because, after various social activities, university students would have little energy and time to join in social activities such as communication and teamwork. This can be established by a recent study by Monash University, that 94% of Australian University students claim they do not have much time for social activities because of their overloading extra-curricular activities.

With all the points above, the conclusion can be made that involvement in extra-curricular activities would not be important for both school children and university students, because children will have less time practicing hobbies and university students would have fewer opportunities in social activities.

50. 与书本，正统教育相比，人生经历经验是更好的老师？ #101122

Some people argue that experience is the best teacher. Life experiences can teach more effectively than books or formal school education. How far do you agree with this idea? Support your opinion with reasons and/or your personal experience. #101122

范文 1

There is no doubt that life experiences can teach more effectively than books or formal school education. Some people point out that they agree that experience is the best teacher, whereas others would believe that they disagree with this idea. Personally speaking, I agree that life experiences are beneficial than books or formal school education.

The first and the most important reason for my belief is that life experiences could enhance the problem-solving skill of a person which is obvious because they will learn from the process on how to solve the problems at the same time. To further support the above statement, I have learned the problem-solving skill when I was working as a part-time waitress during my university days which I think that the life experience that I gained would help in my entire life.

On the other hand, the second reason for this argument is that life experiences could promote the competitiveness of a person in their future job, which is reasonable because when the moment they gain the life experiences, they could practice and get ready to apply the experiences in their future job. This can be established by a recent study by Cambridge University which stated that 80% of people agreed that life experiences will promote competitiveness in the future job.

With all the points above, the conclusion can be made that I agree that life experiences can teach more effectively than books or formal school education because it could enhance problem-solving skill and promote the competitiveness of the future job of a person. In this regard, the schools should educate the students on the importance of life experiences.

Some people argue that experience is the best teacher. Life experiences can teach more effectively than books or formal school education. How far do you agree with this idea? Support your opinion with reasons and/or your personal experience. #101122

范文 2

In the prosperous world, whether the experience is more effective and useful than books and formal education is debatable. Some claim that practical skills cannot facilitate people to gain high distinction in university, while others disagree. Personally speaking, experience and formal education are equivalently essential.

First and foremost, the experience is useful and effective as it enables individuals to acquire practical methods of manipulation. To elaborate, people are trained to conquer difficulties by realistic operations, so their skills are more applicable in life, which implies a more referential value. For instance, Time magazine demonstrated that 2 million managers in America admitted their work experiences, rather than textbook theories, facilitated their efforts to learn business operations more efficiently. Thus, experience plays a vital role in enhancing practical competence.

However, formal education is crucial as it equips youngsters with comprehensive knowledge through a well-designed curriculum. Specifically, conventional education has a systematical knowledge structure which offers students the intellectual capital by diverse subjects. Irrefutably, only traditional education enables one to be knowledgeable in an integrated way. According to BBC News, 5 million top business persons claimed that formal education gave them 80% of the necessary knowledge in various aspects of work, due to the well-organized teaching structure. Hence, formal education provides one with comprehensive knowledge,

By and large, both experience and formal education are significant as they enhance practical skills and more integrated knowledge respectively.

Some people argue that experience is the best teacher. Life experiences can teach more effectively than books or formal school education. How far do you agree with this idea? Support your opinion with reasons and/or your personal experience. #101122

范文 3

There is no doubt that experience, as well as books and formal education, are indispensable for individuals. Some people argue that life experience is the best teacher whereas others disagree. I strongly believe that books and formal education are more effective and useful than life experience, which can be supported by the reasons as follows.

The first reason is that books and formal education have a more referential value because they provide various realistic examples and cases. In this regard, individuals can solve problems more effectively by referring to cases in books. This can be supported by a recent report published by Oxford University that 85% of doctors and police officers prefer to acquire inspirations by reading books when they come across challenges in their jobs.

On the other hand, the second reason is that books and formal education offer people a systematic knowledge structure that assists learners with logical deductions. Specifically, individuals can deal with various problems effectively by applying the same theory in books. This can be established by my own story that when I was in high school, I could correctly predict the results of some experiments based on the principles and relevant knowledge I learned from reading books and formal education.

With all the points above, the conclusion can be drawn that books and formal education are more effective and useful since they have a more referential value and provide a systematic knowledge structure.

Some people argue that experience is the best teacher. Life experiences can teach more effectively than books or formal school education. How far do you agree with this idea? Support your opinion with reasons and/or your personal experience. #101122

范文 4

There is no doubt that life experiences can teach more effectively than books or formal school education. Some people point out that experience is the best teacher, whereas others disagree. Personally speaking, I strongly believe that life experiences are more beneficial than books or formal school education, which can be supported as follow.

The first and the most important reason for my belief is that life experiences help students understand and memorize knowledge more easily, which is obviously because life experience generated would enhance students' memory and interpretation of the knowledge by conducting experiments or watching the real process of the experiments by themselves. To further support my statement, I could memorize knowledge by forming a life experience more profoundly comparing to just learn the theories from books or formal education.

The second reason for my argument is that life experience is more helpful for students to develop practical skills than books or formal education, which is reasonable because with the opportunities applying textbook concepts in real cases, practical experience can be learned and accumulated to cultivate skills. This can be established by a recent study of Oxford University which stated that 76% of students with experiential learning experience have better performance in practical skills comparing to peers.

With all the points above, the conclusion can be made that life experience can be a better teacher comparing to textbooks and formal education because it can enhance students' understanding, memory, and practical skills. In this regard, governments should devote sufficient funding and public awareness should be arisen to improve the situation.

Some people argue that experience is the best teacher. Life experiences can teach more effectively than books or formal school education. How far do you agree with this idea? Support your opinion with reasons and/or your personal experience. #101122

范文 5

There is no doubt that life experiences and books are both important to students. Personally speaking, I strongly believe that books and formal school education are more effective than life experiences.

The first and the most important reason for my belief is that books can help students to develop a solid foundation. To be more specific, since books contain explicit theoretical instructions and a large number of questions, students can learn the knowledge systematically and get more practice from books, which means that it is easier for students to consolidate what they have learned from books rather than life experiences. According to a survey by Oxford University, 75% of scientists prefer to learn from books to lay their foundations.

In addition, formal school education can improve students' critical thinking abilities. To be more specific, since some subjects at school, such as mathematics, require students to solve questions logically, students will need to address the problems through a step-by-step process and exercise their judgment during solution, which requires significant critical thinking skills. According to a survey by Harvard University, 85% of students have improved critical thinking skills at formal school education.

With all the points above, the conclusion can be made that books or school education can teach more effectively than life experiences because school education can help students to accumulate their knowledge systematically and improve their critical thinking skills.

51. 大学用户电子书还是纸质书 #101123

With the increase of digital media available online, the role of the library has become obsolete. Universities should only procure digital materials rather than constantly textbooks. Discuss both the advantages and disadvantages of this position and give your point of view. #101123

范文 1

There is no doubt that with the increase of digital media available online, the role of the library has become obsolete. Some people argue that universities should only procure digital materials rather than constantly textbooks whereas others disagree. I strongly believe that there are both advantages and disadvantages for universities to prepare only digital material rather than printed textbooks, which are listed as follows.

The advantage is that universities replacing printed textbooks with their digital version is beneficial to make the materials more accessible for students. Specifically, students can borrow materials in the library without any restrictions on loan periods since digital materials have no limitations on quantity. This can be supported by my own experience that I could borrow reference books from the school library much more easily after my university started to replace the printed textbooks with digital materials.

On the other hand, the disadvantage of universities only procuring digital materials is that it increases the schools' expenditure. This is because the universities need to invest extra money in purchasing the digital version of all the materials which they have already had a printed version in their library. This can be established by a recent report conducted by Oxford universities that universities that promote digital materials to replace paper textbooks spend 60% more money on filling their library than those who do not.

With all the points above, the conclusion can be drawn that universities only procuring digital materials rather than constantly textbooks have an advantage that it makes materials more accessible, while it also brings a disadvantage that it increases the universities' expenditure on the library.

52. 政府应该改善公共交通还是多修路 #101124

As cities expanding, some people claim governments should look forward to creating better networks of public transportation available for everyone rather than building more roads for vehicle owning population. What's your opinion? Give some examples or experience to support. #101124

范文 1

There is no doubt that the traffic condition is becoming worse and worse as cities expanding. Some people claim the government should create a better network of public transportation for all citizens instead of building more roads for drivers. Personally speaking, I strongly believe the government should pay attention to both approaches, which can be supported as follows.

First and foremost, improved public transport can reduce carbon dioxide emissions, which is obvious because if public transport is improved in terms of time, cost and frequency, there will be more people willing to take them. The more people use public transport, the fewer individuals drive cars. This change leads to less use in private cars which is the major source of carbon dioxide emissions. As a consequence, carbon dioxide emissions would be lowered by developing public transportation network. This can be supported by a report by the Department of Transport and the University of Melbourne indicating the total amount of annual carbon dioxide emissions have decreased significantly by over 50% since the new bus system was established in 2001.

On the other hand, building more roads for car owners brings numerous job opportunities. To be more specific, building or widening roads potentially includes works on related surroundings such as traffic lights, traffic signs, and trees. Working on all these requires laborers and professionals. Besides, after a road is built, new stores will gradually open along with it, offering more job positions such as sales, designers, technicians, and engineers. This can be established by a study by the Department of Employment showing about 80% more jobs are offered in the areas near road construction than elsewhere in 2010.

In conclusion, considering reducing carbon dioxide emissions and bringing job opportunities, I suppose the government should take action in both enhancing public transport systems and building roads.

As cities expanding, some people claim governments should look forward to creating better networks of public transportation available for everyone rather than building more roads for vehicle owning population. What's your opinion? Give some examples or experience to support. #101124

范文 2

There is no doubt that our cities are expanding rapidly. Some people point out that governments should create better networks of public transportation, whereas others would believe that the government should build more roads for vehicle owning population. Personally speaking, I strongly believe that creating more networks of public transportation is more necessary.

The first and the most important reason for my belief is that building better networks of public transportation can eliminate air pollution. To be more specific, public transportation, which is based on electricity, is much more environmentally friendly because it has fewer sulfide emissions by using clean energy. As a result, air pollution can be reduced to a certain extent. For example, according to a study conducted by Cambridge University, sulfide emissions reduced by 10% in 2016 after the UK government put two more subways into operation. Furthermore, in that year, the numbers of air pollution index reduced by 5%.

The second reason for this argument is that better networks of public transportation can relieve traffic congestion. In another word, public transportation can convey more people than individual automobiles in much less space, which helps riders avoid the stress that comes from daily driving in highly congested areas. Therefore, there will be fewer traffic jams. To further support the above statement, in the past few years, I spent more than one hour driving from workplace to home. However, since railways are built in my city this year, driving home only costs half an hour, which brings great convenience to me.

With all the points above, the conclusion can be made that the government should build better networks of public transportation because it can not only eliminate air pollution but also relieve traffic congestion.

As cities expanding, some people claim governments should look forward to creating better networks of public transportation available for everyone rather than building more roads for vehicle owning population. What's your opinion? Give some examples or experience to support. #101124

范文 3

There is no doubt that traffic issues have aroused public attention due to the expansion of cities. There are some strategies for the government to implement. Personally speaking, I believe that governments should create a better public transportation network rather than build more roads for a private vehicle, which could be supported by the following reasons.

The first and the most important reason for my belief is that creating better networks of public transportation for everyone by the government can reduce the greenhouse emission effects. To illustrate, people will take public transport instead of driving their private cars if there is a well-designed public network available, which means fewer greenhouse exhausts will be emitted from private fuel-driven vehicles. This can be established by recent research by Oxford University which stated that creating a better network of public transportation can reduce at least 50% of the greenhouse emission.

In addition, another reason for my argument is that governments creating comprehensive public transportation can reduce traffic congestion effectively. To be more specific, public vehicles can take more people in the same space compared with private vehicles, which means there will be fewer automobiles on the way. For example, I have read an article published in the China Daily which revealed that good public transportation could reduce traffic congestion during the rush hour.

With all points above, the conclusion can be made that governments should create a better public transportation network rather than build more roads for a private vehicle as cities are expanding because public transportation can reduce greenhouse emissions and it can reduce traffic congestion.

As cities expanding, some people claim governments should look forward creating better networks of public transportation available for everyone rather than building more roads for vehicle owning population. What's your opinion? Give some examples or experience to support. #101124

范文 4

There is no doubt that some people claim the governments should look forward to creating better networks of public transportation available for everyone rather than building more roads for vehicle owning population. Personally speaking, I believe that the government should create better networks of public transportation available for everyone, which can be supported by the following reasons.

First and foremost, making better networks of public transportation can help more people travel across the city. To be more specific, a majority of the residents are unable to afford to buy a car, so having better networks of public transportation can help them get access to transportation options at affordable costs. For example, I have read a recent study of Harvard University illustrating that 87% of American citizens believe people prefer to have public transportation rather than building more roads.

On the other hand, governments building better networks of public transportation can solve traffic congestion in the cities. To illustrate, shifting citizens from driving privately to taking public transports to decrease the number of automobiles on the road, relieving the traffic pressure. For example, I have read a recent study of Oxford University stating that 69% of British people believe an effective network of public transportation can reduce traffic congestion in urban areas.

In conclusion, I deem that creating better networks of public transportation available for everyone is better because it can help more people afford transportations and solve the traffic congestion problem.

53. 工人护士应该有更高的薪水 #101125

Many workers like nurses and teachers should get more pay, especially in recent years people in finance/film actors and company leaders were paid a larger amount of sum. To what extent do you agree or disagree with the above statement and what's your opinion? #101125

范文 1

There is no doubt that there are many workers and nurses working with low income. Some people argue that workers and nurses should be offered a higher wage whereas others disagree. I strongly believe that workers and nurses should be paid more, which can be supported by the reasons as follows.

The first reason is that workers and nurses are easy to have a bad health condition due to their heavy workloads. In this regard, workers and nurses deserve a higher wage to cover the expensive costs of their medical treatments. This can be supported by a recent report in the country which I live in, China. The report indicates that 75% of workers and nurses in China suffer from occupational diseases, and most of them are unable to afford their medical treatments with their low income.

On the other hand, the second reason is that offering a higher wage to workers and nurses is beneficial to curbing the crime rate. This is because a higher wage motivates potential criminals to choose to become a worker or a nurse instead of committing crimes to support their life. This can be established by a study published by Oxford University that the crime rate in the UK has decreased by 20% since 2010 owing to a policy that the British government increases the income of workers and nurses by 30%.

With all the points above, the conclusion can be drawn that workers and nurses should be paid more because they deserve a higher income to cover their costs of medical treatments, and offering a high income helps curb the crime rate.

54. 兼顾工作和私人生活（普遍性与后果） #101126

The time people devote in job leaves very little time for personal life. How widespread is the problem? What problem will this shortage of time cause? #101126

范文 1

Many people argue that the time people devote to the job leaves very little time for personal life. Personally speaking, I strongly believe this trend is extremely widespread, and the shortage of time in personal life will cause serious problems, which will be explained by the following reasons.

First and foremost, people failing to balance life and work is extremely widespread because of high competition in the job market. To be more specific, since people are facing highly competitive job tasks, they have to sacrifice their leisure time to complete their workloads. For example, I have read a recent study of Oxford University stating that 80% of people believe it is quite widespread that people have spent too much time times in jobs.

Moreover, this shortage of time in personal life will cause family issues. To be more explicit, since less time is devoted to personal life, it is quite hard for people to take care of their spouse and children, causing family fights and relationship breakdown. For instance, a recent study conducted by Cambridge University shows that too much time spending on a job increases 52% of family issues.

In conclusion, the trend that people devote much time to the job and leaves little time for personal life is extremely widespread. It is obvious that this trend can cause many bad family issues.

The time people devote to the job leaves very little time for personal life. How widespread is the problem? What problem will this shortage of time cause?
#101126

范文 2

The time people devote to the job leaves very little time for personal life. Some people believe that the balance between work and life is critical, whereas others disagree. Personally speaking, this problem is extremely widespread and it causes many problems in our society.

On the one hand, the time people devote to a job leaves very little time for personal life as a normal phenomenon among accounting professionals. To be specific, people who are accountants or auditors need to spend a long time getting in touch with their clients for document updates and providing business advice. In this case, they will be overwhelmed by a massive amount of work every day especially in the tax season, so they can only have little time for their personal life. To further support the above statement, it can be established by research by Oxford University which stated that more than 80% of accountants and auditors always work overtime and have little spare time.

On the other hand, when jobs take over personal life it can cause mental disorders, which is obvious because one's energy is limited and they need to enjoy their personal life to get relaxed and refreshed. Therefore, they may develop depression and anxiety if they focus on work for a long period of time without enough rest. For example, it can be established by a survey, which stated that more than 70% of people who are always working overtime agree that they developed mental disorders because of insufficient time for personal life.

In conclusion, the problem of insufficient time for a personal time caused by jobs is extremely widespread especially in the accounting sector and it may cause mental disorder if the balance between life and work is not maintained.

55. 兼顾工作与生活（重要性与原因） #101127

Nowadays, it is increasingly more difficult to maintain the right balance between work and other aspects of one's life, such as time with family and leisure needs. How important do you think is this balance? Why do people find it hard to achieve? #101127

范文 1

There is no doubt that it is increasingly more difficult to maintain the right balance between work and other aspects of one's life. Some people state that balance is important whereas others disagree. I strongly believe that it is extremely essential for individuals to maintain the balance between their employment while it is hard to achieve, which can be supported by the reasons as follows.

Firstly, the balance between work and other aspects of one's life is extremely essential for individuals because it is closely related to their mental health. Specifically, maintaining the balance helps individuals to keep an optimistic status because their jobs can provide them with a sense of accomplishment while enjoying other aspects of life helps them to relieve stress during work. This can be supported by my observation that my colleagues who can maintain a balance between work and life are 69% less likely to suffer from mental diseases.

The reason why people find the balance between work and life is hard to achieve is the pressure of the heavy workloads in their workplace. This is reasonable because they need to work overtime otherwise they might lose their jobs, hence they have no extra time to spend in other aspects of life. This can be established by a recent study conducted by Oxford University that the primary reason for individuals' failure to maintain the balance between work and life is the heavy stress during work.

With all the points above, the conclusion can be drawn that the balance between work and other aspects of life is extremely essential for individuals because it helps them to keep mental health, while the difficulty is the heavy pressure in the workplace.

Nowadays, it is increasingly more difficult to maintain the right balance between work and other aspects of one's life, such as time with family and leisure needs. How important do you think is this balance? Why do people find it hard to achieve? #101127

范文 2

There is a controversy about work-life balance. Some people think it is not crucial whereas others disagree. Personally speaking, maintaining the right balance between work and other aspects of life is important. However, it is difficult to achieve, which can be supported as follows.

It is important to keep the balance between work and other aspects of people's life because it can increase working efficiency. To illustrate, to maintain this balance, people schedule some time for recreation such as seeing a movie. Such balance helps boost working efficiency as people can devote more energy and concentrate more on the work or even get inspiration with a relaxed mind after relaxation. For example, yesterday I spent three hours struggling to complete my thesis, but I got an idea completed my dissertation in just 30 minutes after I rested for a while.

However, it is difficult for people to achieve a balance between work and other aspects of life because of limited time and energy. To elaborate, a burdensome working schedule accounts for the majority of the day and leaves no time for other activities. Moreover, after long working hours, people are exhausted and have no energy and desire to engage in recreational activities, so achieving this balance will be hard. For instance, after the tiring night shifts in Coles supermarket last Tuesday, I refused to go to a club with my friends because I had no energy and just wanted to have a rest at home.

In conclusion, achieving a balance between work and private life can achieve a better working performance, but it is hard to achieve because of limited time and energy.

Nowadays, it is increasingly more difficult to maintain the right balance between work and other aspects of one's life, such as time with family and leisure needs. How important do you think is this balance? Why do people find it hard to achieve? #101127

范文 3

Nowadays, it is increasingly more difficult to maintain the right balance between work and other aspects of life. Personally speaking, it is extremely important to maintain balance and it can be hard to achieve for employees who work in multinational companies.

On the one hand, it is important to maintain a work-life balance because it can maintain a healthier and more productive workforce. To be more specific, enjoying your personal life out of work can reduce stress and prevent negative emotions in the workplace, so the right balance between work and life can keep people working effectively. To further support the statement, it can be established by a study by Cambridge University which stated that more than 80% of people agree that work-life balance can maintain work efficiency.

On the other hand, it is hard for employees who work at multinational companies to achieve work-life balance. To elaborate, their clients are from different countries, so they need to be always available when working with overseas clients at different time lags, which leaves little time for their personal life. For example, it can be established by a study by Melbourne University which stated that more than 80% of people who work in international companies cannot maintain a work-life balance.

In conclusion, it is extremely important to maintain work-life balance, and it can be hard to achieve for international company workers because they work with clients in different time zones.

56. 描述一个新发明的优缺点 #101128

In this technological world, the number of new inventions has been increasing. Please describe a new invention, and determine whether it will bring advantages or disadvantages. #101128

范文 1

As the technological world evolved a lot, there is no doubt that many useful inventions have emerged in recent years. Personally speaking, I strongly believe that the computer which is a recent beneficial invention, has positive influences on society, including increasing productivity and reducing labor cost

To begin with, the computer, a recent beneficial invention, can increase the productivity of society. To illustrate, as a computer is based on a powerful database and has much stronger abilities in computing and calculating, it can help people accomplish work more efficiently than before. For example, a company could only complete market analysis in ten days by writing and calculating on the paper 100 years ago. However, this work can be finished in an hour today by creating a spreadsheet on the computer. Thus, the computer can generate more productivity for human beings.

Furthermore, the computer, a recent beneficial invention, can help to reduce the labor cost of society. In other words, since the computer has various robust functions and a superior ability to process information than human beings, it can complete a complex work by itself instead of four or five people. Thus, direct labor cost would reduce significantly. For instance, in the past, the laboratory of Cambridge University required four people to do scientific research about gene biology, but now they only need one scientist to finish it by manipulating computers. As a result, they saved the direct labor costs of the wages of three people.

To sum up, computers which are a recent beneficial invention can not only increase productivity but also reduce the labor cost of society. Thus, society in this technological world has been positively impacted.

57. 成长环境对人的影响（名人为例） #101129

There are many people who are defined by the place where they grow up. Please think of a celebrity you know who becomes famous because of his/her home base or the place where he/she grows up. Give examples of how his/her accomplishment is influenced by the place where he/she grows up. #101129

范文 1

There is no doubt that there are many people who are defined by the place they grow up. Personally speaking, I believe that Bill Gates, as the famous information technology leader, is influenced by his hometown Silicon Valley, which will be explained by reasons as follows.

First and foremost, Bill Gates becomes the richest person in the globe because lots of venture capital invested in the technology field is prevalent in Silicon Valley. To be more specific, when he needed money to expand his business to make a fortune, he can easily get access to funds that aim at technology companies, which is the explicit advantage of Silicon Valley. For example, once Microsoft, the business of Bill Gates, was facing expansion and Bill wanted to earn more money in 2000, he got 2 billion dollars investment from a foundation based in Silicon Valley.

Secondly, Bill Gates achieved many technologically innovative accomplishments because Silicon Valley offered suitable circumstances for inspiring innovations. To illustrate, since he aimed to develop more advanced IT software, he can get updated news in the information technology fields and adopt ideas from elites in respective areas to apply to software development, which can be a reality only in Silicon Valley. For instance, Bill was developing the Microsoft XP system in 2005, and he absorbed lots of creative ideas from technical peers in Silicon Valley.

In conclusion, the conclusion can be drawn that Bill Gates has been significantly influenced by his hometown Silicon Valley because the place is suitable for financing and innovation.

There are many people who are defined by the place where they grow up. Please think of a celebrity you know who becomes famous because of his/her home base or the place where he/she grows up. Give examples of how his/her accomplishment is influenced by the place where he/she grows up. #101129

范文 2

There are many people who are defined by the place where they grow up. Personally speaking, I think Jack Ma, as the owner of the largest online shopping company, Taobao, in China, is influenced by his hometown Hangzhou, which will be explained by reasons as follows.

First and foremost, Jack Ma has been the richest person in China because there are numerous venture capital companies in Hangzhou that would like to invest in the online trading industry. To be more specific, when he needed money to start or expand his business, he would easily get funds from venture capital companies in the city. For instance, in 2014, Jack wanted to earn more money for expanding his online shopping company, and he successfully got 20 billion dollars from a local venture capital company.

Secondly, Jack Ma owns the most developed technology of online payment because universities in his hometown Hangzhou keep cultivating technical stuff in the information science field. To be more specific, whenever Jack Ma was going to improve his online payment system, he could easily find talented graduates from local universities to support the development of his enterprise. For example, in 2017, his company hired 150 computer science graduates in one month to improve the security of his online payment system.

In conclusion, Jack Ma's achievements, becoming the richest guy and owning the most developed online payment system, are both influenced by his hometown, which is because there are a lot of venture capital companies and talented graduates in the online trading industry,

There are many people who are defined by the place where they grow up. Please think of a celebrity you know who becomes famous because of his/her home base or the place where he/she grows up. Give examples of how his/her accomplishment is influenced by the place where he/she grows up. #101129

范文 3

There is no doubt that many people have been affected by the environment where they grow up. Some people argue that the place does have an impact on individuals. Personally speaking, one celebrity, Bruce Lee, earns his fame because of his home base, which can be supported as follows.

First and foremost, the prosperity of the film industry in Hong Kong offered Bruce Lee opportunities to appear in films at a very young age, which paved the way for him to step into this industry later. To be more specific, the film industry was booming in Hong Kong during the 1940s-1950s and thereby, a higher demand appeared for movie production and actors, which allowed Bruce Lee to get auditions and started his acting career in the early 40s. For example, Bruce Lee was in roughly 20 films as a child actor in the 1940s and became famous after the film industry thrived in Hong Kong.

In addition, the Kung Fu culture in Hong Kong was prevalent in the 1950s, which helped Bruce Lee to obtain a very high level of achievement in Kung Fu. To be more explicit, Hong Kong was embraced by the Kung Fu culture and local schools were specialized in teaching a range of Kung Fu styles, which stimulated Bruce to hone his passions into this discipline. Thanks to the environment, Bruce managed to study Kung Fu under the tutelage of a master and achieved very high performance. For instance, Bruce Lee was taught by a master called Yip Man in Hong Kong and became a well-known action hero in many films with his excellent performance of Kung Fu.

With all the points above, the conclusion can be drawn that Bruce Lee's accomplishments have been significantly influenced by Hongkong's booming movie industry and the Kung Fu culture.
