1. Indian IT #061001

(以下为确认原文 *Original text found and confirmed.*)

- 1) Innovation in India is as much due to entrepreneurialism as it is to IT skills, says Arun Maria, chairman of Boston Consulting Group in India.
- 2) Indian businessmen have used IT to create new business models that enable them to provide services in a more cost-effective way.
- 3) This is not something that necessarily requires expensive technical research.
- 4) He suggests the country's computer services industry can simply outsource research to foreign universities if the capability is not available locally.
- 5) "This way, I will have access to the best scientists in the world without having to produce them myself" says Mr. Maria.

2. Foreign aid #061002

(以下为确认原文 *Original text found and confirmed.*)

- 1) But beginning in the 1990s, foreign aid had begun to slowly improve.
- 2) Scrutiny by the news media shamed many developed countries into curbing their bad practices.
- 3) Today, the projects of organizations like the World Bank are meticulously inspected by watchdog groups.
- 4) Although the system is far from perfect, it is certainly more transparent than it was when foreign aid routinely helped ruthless dictators stay in power.

3. Jet Stream #061003

(以下为确认原文 *Original text found and confirmed.*)

- 1) Jet stream, narrow, swift currents or tubes of air found at heights ranging from 7 to 8 mi (11.3–12.9 km) above the surface of the earth.
- 2) They are caused by great temperature differences between adjacent air masses.
- 3) Instead of moving along a straight line, the jet stream flows in a wavelike fashion; the waves propagate eastward (in the Northern Hemisphere) at speeds considerably slower than the wind speed itself.

- 4) Since the progress of an airplane is aided or impeded depending on whether tail winds or head winds are encountered.
- 5) In the Northern Hemisphere the jet stream is sought by eastbound aircraft, in order to gain speed and save fuel, and avoided by westbound aircraft.

4. Map #061004

(以下为确认原文 *Original text found and confirmed.*)

- 1) For as long as I can remember, there has been a map in the ticket hall of Piccadilly Circus tube station supposedly showing night and day across the time zones of the world.
- 2) This is somewhat surprising given the London Underground's historic difficulty in grasping the concept of punctuality.
- 3) But this map has always fascinated me, and still does, even though it now seems very primitive.
- 4) This is because it chops the world up equally by longitude, without regard the reality of either political divisions or the changing seasons.

5. Chimpanzees #061005

(以下为确认原文 *Original text found and confirmed.*)

- 1) A simple way to disprove this hypothesis (the Innateness Hypothesis) is to demonstrate that other species have the capacity to speak but for some reason simply have not developed speech.
- 2) A logical candidate for such a species is the chimpanzee, which shares 98.4% of the human genetic code.
- 3) Chimpanzees cannot speak because, unlike homo sapiens, their vocal cords are located higher in their throats and cannot be controlled as delicately as human vocal cords.
- 4) It does not follow from their lack of speech, however, that chimpanzees are incapable of language.
- 5) Perhaps they can acquire grammar like humans if they could only express it some other way.

6. Immigration Effect #061006

(以下为确认原文 *Original text found and confirmed.*)

- 1) In the early years of the twenty-first century the impact of immigrants on the welfare state and, specifically, the capacity of the welfare state to absorb large numbers of immigrants has become a staple of discussion among policy makers and politicians.
- 2) It is also a recurrent theme in the press, from the highbrow pages of Prospect to the populism of the Daily Mail.
- 3) Inevitably, these discussions focus on present-day dilemmas.
- 4) But the issues themselves are not new and have historical roots that go much deeper than have been acknowledged

7. Mother of Storm #061007

(以下为确认原文 *Original text found and confirmed.*)

- 1) Unlike Barnes' previous books, Mother of Storms has a fairly large cast of viewpoint characters.
- 2) This usually irritates me, but I didn't mind it here, and their interactions are well-handled and informative, although occasionally in moving them about the author's manipulations are a bit blatant.
- 3) They're not all necessarily good guys, either, although with the hurricanes wreaking wholesale destruction upon the world's coastal areas, ethical categories tend to become irrelevant.
- 4) But even the Evil American Corporate Magnate is a pretty likable guy.

8. Charles Lindbergh #061008

(以下为确认原文 *Original text found and confirmed.*)

- 1) After finishing first in his pilot training class, Lindbergh took his first job as the chief pilot of an airmail route operated by Robertson Aircraft Co. of Lambert Field in St. Louis, Missouri.
- 2) He flew the mail in a de Havilland DH-4 biplane to Springfield, Illinois, Peoria and Chicago.

- 3) During his tenure on the mail route, he was renowned for delivering the mail under any circumstances.
- 4) After a crash, he even salvaged bags of mail from his burning aircraft and immediately phoned Alexander Varney, Peoria's airport manager, to advise him to send a truck.

9. SEPAHUA #061009

(以下为确认原文 *Original text found and confirmed.*)

- 1) SEPAHUA, a ramshackle town on the edge of Peru's Amazon jungle, nestles in a pocket on the map where a river of the same name flows into the Urubamba.
- 2) That pocket denotes a tiny patch of legally loggable land sandwiched between four natural reserves, all rich in mahogany and accessible from the town.
- 3) In 2001 the government, egged on by WWF, a green group, tried to regulate logging in the relatively small part of the Peruvian Amazon where this is allowed.
- 4) It abolished the previous system of annual contracts.
- 5) Instead, it auctioned 40-year concessions to areas ruled off on a map, with the right to log 5% of the area each year. The aim was to encourage strict management plans and sustainable extraction.

10. Piano keys #061010

- 1) Piano keys are generally made of spruce or basswood, for lightness.
- 2) Spruce is normally used in high-quality pianos.
- 3) Traditionally, the black keys were made from ebony and the white keys were covered with strips of ivory.
- 4) But since ivory-yielding species are now endangered and protected by treaty, plastics are now almost exclusively used.
- 5) Also, ivory tends to chip more easily than plastic.

11. International Date Line #061011

(以下为确认原文 *Original text found and confirmed.*)

- 1) International Date Line, imaginary line on the earth's surface, generally following the 180° meridian of longitude, where, by international agreement, travelers change dates.

英澳新三国（同一国家任意三所院校） 1080

免收服务费申请 扫码咨询

- 2) The date line is necessary to avoid a confusion that would otherwise result.
- 3) For example, if an airplane were to travel westward with the sun, 24 hr would elapse as it circled the globe, but it would still be the same day for those in the airplane while it would be one day later for those on the ground below them.
- 4) The same problem would arise if two travelers journeyed in opposite directions to a point on the opposite side of the earth, 180° of longitude distant.
- 5) The apparent paradox is resolved by requiring that the traveler crossing the date line change his date, thus bringing the travelers into agreement when they meet.

12. Aviation #061012

(以下为确认原文 *Original text found and confirmed.*)

- 1) During the 1920s and 1930s great progress was made in the field of aviation, including the first transatlantic flight of Alcock and Brown in 1919, Charles Lindbergh's solo transatlantic flight in 1927, and Charles Kingsford Smith's transpacific flight the following year.
- 2) One of the most successful designs of this period was the Douglas DC-3, which became the first airliner to be profitable carrying passengers exclusively, starting the modern era of passenger airline service.
- 3) By the beginning of World War II, many towns and cities had built airports, and there were numerous qualified pilots available.
- 4) The war brought many innovations to aviation, including the first jet aircraft and the first liquid-fueled rockets.

13. Aviation after World War II #061013

(以下为确认原文 *Original text found and confirmed.*)

- 1) After World War II, especially in North America, there was a boom in general aviation, both private and commercial, as thousands of pilots were released from military service and many inexpensive war-surplus transport and training aircraft became available.
- 2) Manufacturers such as Cessna, Piper, and Beechcraft expanded production to provide light aircraft for the new middle-class market.

- 3) By the 1950s, the development of civil jets grew, beginning with the de Havilland Comet, though the first widely used passenger jet was the Boeing 707, because it was much more economical than other aircraft at that time.
- 4) At the same time, turboprop propulsion began to appear for smaller commuter planes, making it possible to serve small-volume routes in a much wider range of weather conditions.

14. Actors and characters #061014

- 1) In a wonderful set of studies and subsequent book, Elly A. Konijn looked to the question of how much actors are aware of their performance as they perform it, and how much they let the character “take over”.
- 2) She asked Dutch actors to rate their own emotions and the emotions of the characters they were playing across a range of affective states (from disgust and anxiety to tenderness and pleasure).
- 3) She found that positive emotions were often felt by the actors as they played those character’s emotions.
- 4) However, the more negative the emotion of the character, the less likely the actor would report feeling that emotion onstage.

15. Ocean floors #061015

(以下为确认原文 *Original text found and confirmed.*)

- 1) The topography of the ocean floors is none too well known, since in great areas the available soundings are hundreds or even thousands of miles apart.
- 2) However, the floor of the Atlantic is becoming fairly well known as a result of special surveys since 1920.
- 3) A broad, well-defined ridge – the Mid-Atlantic ridge – runs north and south between Africa and the two Americas, and numerous other major irregularities diversify the Atlantic floor.
- 4) Closely spaced soundings show that many parts of the oceanic floors are rugged as mountainous regions of the continents.

16.Volkswagen #061016

(以下为确认原文 *Original text found and confirmed.*)

- 1) Despite posting healthy profits, Volkswagen shares trade at a discount to peers due to bad reputation among investors, high capital expenditure and its close links to the state of Lower Saxony, which effectively has a blocking minority.
- 2) A disastrous capital hike, an expensive foray into truck business and uncertainty about the reason for a share buyback has in recent years left investors bewildered.
- 3) “The main problem with Volkswagen is the past. Many investors have been disappointed and frightened away,” said one Paris-based fund managers.
- 4) Volkswagen shares trade at about nine times the 2002 estimated, compared to BMW’s 19 and are the second cheapest in the sector.

17.Marquez #061017

(以下为确认原文 *Original text found and confirmed.*)

- 1) Marquez arrived in October 1577 at the abandoned town of Sahta Elena with two ships carrying pre-fabricated posts and heavy planking.
- 2) He erected fort San Marcos in six days in defense against a Native American attack such as the one that forced the abandonment of the town a year earlier.
- 3) The town had flourished, nearing 400 residents, since its establishment more than a decade earlier in 1566 by Pedro Menendez de Aviles who had founded La Florida and St. Augustine the year before.
- 4) In 1571 it became the capital of Spanish Florida.

18.Earth-like planets #061018

(以下为确认原文 *Original text found and confirmed.*)

- 1) A team of scientists has discovered two Earth-like planets in the habitable orbit of a Sun-like star.
- 2) Using observations gathered by NASA's Kepler Mission, the team found five planets orbiting a Sun-like star called Kepler-62.
- 3) Four of these planets are so-called super-Earths, larger than our own planet, but smaller than even the smallest ice giant planet in our Solar System.

- 4) These new super-Earths have radii of 1.3, 1.4, 1.6, and 1.9 times that of Earth.
- 5) In addition, one of the five was a roughly Mars-sized planet, half the size of Earth.

19. Carbon Detox #061019

(以下为确认原文 *Original text found and confirmed.*)

- 1) In his fascinating book *Carbon Detox*, George Marshall argues that people are not persuaded by information.
- 2) Our views are formed by the views of the people with whom we mix.
- 3) Of the narratives that might penetrate these circles, we are more likely to listen to those that offer us some reward.
- 4) He proposes that instead of arguing for sacrifice, environmentalists should show where the rewards might lie.
- 5) We should emphasize the old-fashioned virtues of uniting in the face of a crisis, of resourcefulness and community action.

20. Battle with enemy #061020

(以下为确认原文 *Original text found and confirmed.*)

- 1) With regard to defence, the purpose of the military is to defend the nation and be prepared to do battles with its enemy.
- 2) How do you do battle with your enemy?
- 3) The idea is to destroy the enemy's productive capacity, and depending upon the economic foundation, that the productive capacity is different in each case.
- 4) So in the agrarian era, if you need to destroy the enemy's productive capacity, what you want to do is burn his fields, or if you're really vicious, salt them.
- 5) But in the industrial era destroying the enemy's productive capacity means bombing the factories which are located in the cities.
- 6) Now in the information era, destroying the enemy's productive capacity means destroying the information infrastructure.

21. An underperforming company #061021

(仅大意, 非原文 *Only the gist, not the original text.*)

- 1) Take an underperforming company
- 2) Add some generous helping of debt, a few spoonful of management incentives and trim all the fat.
- 3) Leave to cook for five years and you have a feast of profits.
- 4) That has been the recipe for private-equity groups during the past 200 years.

22. Environmental revolution #061022

(以下为确认原文 *Original text found and confirmed.*)

- 1) The environmental revolution has been almost three decades in the making, and it has changed forever how companies do business.
- 2) In the 1960s and 1970s, corporations were in a state of denial regarding their impact on the environment.
- 3) Then a series of highly visible ecological problems created a groundswell of support for strict government regulation
- 4) In the United States, Lake Erie was dead. In Europe, the Rhine was on fire. In Japan, people were dying of mercury poisoning.
- 5) Today many companies have accepted their responsibility to do no harm to the environment.

23. German invasion #061023

(以下为确认原文 *Original text found and confirmed.*)

- 1) German invasion of Poland officially triggered the Second World War.
- 2) In the beginning, Britain and France were hopeful that Poland should be able to defend her borders.
- 3) But Polish forces could not defend a long border.
- 4) They lacked compact defence lines and additionally their supply lines were also poorly protected.
- 5) Meanwhile, the world had woken up to the potential of atomic energy and countries were conducting testes to exploit the same.

24. Top executives #061024

(以下为确认原文 *Original text found and confirmed.*)

- 1) The top executives of the large, mature, publicly held companies hold the conventional view when they stop to think of the equity owners' welfare.
- 2) They assume that they're using their shareholders' resources efficiently if the company's performance—especially ROE and earnings per share—is good and if the shareholders don't rebel.
- 3) They assume that the stock market automatically penalizes any corporation that invests its resources poorly.
- 4) So companies investing well grow, enriching themselves and shareholders alike, and ensure competitiveness; companies investing poorly shrink, resulting, perhaps, in the replacement of management.
- 5) In short, stock market performance and the company's financial performance are inexorably linked.

25. Wagonways #061025

(以下为确认原文 *Original text found and confirmed.*)

- 1) Roads of rails called Wagonways were being used in Germany as early as 1550.
- 2) These primitive railed roads consisted of wooden rails over which horse-drawn wagons or carts moved with greater ease than over dirt roads. Wagonways were the beginnings of modern railroads.
- 3) By 1776, iron had replaced the wood in the rails and wheels on the carts.
- 4) In 1789, Englishman, William Jessup designed the first wagons with flanged wheels.
- 5) The flange was a groove that allowed the wheels to better grip the rail, this was an important design that carried over to later locomotives.

26. Engineers in Energy Sector #061026

(以下为确认原文 *Original text found and confirmed.*)

- 1) The energy sector has a fantastic skills shortage at all levels, both now and looming over it for the next 10 years.
- 2) Engineers, in particular, are much needed to develop greener technologies.

- 3) Not only are there some good career opportunities, but there's a lot of money going into the research side, too.
- 4) With the pressures of climate change and the energy gap, in the last few years funding from the research councils has probably doubled.

27. Liberal Town #061027

(Original text found and confirmed, but some lines have been omitted in the real test.)

下文为确认原文，但真题有所删减

- 1) The town of Liberal is said to have been named for an early settler famous among travellers for being free with drinking water.
- 2) Liberal is conservative in a moderate Midwestern kind of way which is changing fast due to big National Beef Packing plant which relies on Hispanic migrants and thus four-fifths of the children in Liberal's public-school system are Hispanic.
- 3) This should make the town receptive to Democrats, but Mr Trump easily won the county of which it forms part.
- 4) Liberal's mayor, Joe Denoyer, who was raised in a Democratic family near Chicago and moved to Liberal in search of work.
- 5) Mr Denoyer voted for Mr Trump by being impressed by his promise, though he thinks it unlikely that the president will keep his promises.

28. Hypothesis #061028

(以下为确认原文 Original text found and confirmed.)

- 1) Another common mistake is to ignore or rule out data which do not support the hypothesis.
- 2) Ideally, the experimenter is open to the possibility that the hypothesis is correct or incorrect.
- 3) Sometimes, however, a scientist may have a strong belief that the hypothesis is true (or false), or feels internal or external pressure to get a specific result.
- 4) In that case, there may be a psychological tendency to find "something wrong", such as systematic effects, with data which do not support the scientist's expectations, while data which do agree with those expectations may not be checked as carefully.

29. Railway profile #061029

(Original text found and confirmed, but some lines have been omitted in the real test.)

下文为确认原文, 但真题有所删减

- 1) Early rails were used on horse drawn wagon ways originally with wooden rails, but from the 1760s using strap-iron rails, which consisted of thin strips of cast iron fixed onto wooden rails.
- 2) These rails were too fragile to carry heavy loads, but because the initial construction cost was less, this method was sometimes used to quickly build an inexpensive rail line.
- 3) However, the long-term expense involved in frequent maintenance outweighed any savings.
- 4) These were superseded by cast iron rails that were flanged (i.e. 'L' shaped) and with the wagon wheels flat.
- 5) An early proponent of this design was Benjamin Outram. His partner William Jessop preferred the use of "edge rails" in 1789 where the wheels were flanged and, over time, it was realised that this combination worked better.
- 6) The first steel rails were made in 1857 by Robert Forester Mushet, who laid them at Derby station in England. Steel is a much stronger material, which steadily replaced iron for use on railway rail and allowed much longer lengths of rails to be rolled.

30. Human worship Gods #061030

(以下为确认原文 Original text found and confirmed.)

- 1) My study of the history of religion has revealed that human beings are spiritual animals. Indeed, there is a case for arguing that Homo sapiens is also Homo religious.
- 2) Men and women started to worship gods as soon as they became recognizably human; they created religions at the same time as they created works of art.
- 3) This was not simply because they wanted to propitiate powerful forces.
- 4) These early faiths expressed the wonder and mystery that seems always to have been an essential component of the human experience of this beautiful world.

31.Meeting #061031

(以下为确认原文 *Original text found and confirmed.*)

- 1) People always think it's easy to organize a meeting. However, there are many potentials can hinder the starting time.
- 2) This is especially true when employees are working with a large number of partners.
- 3) Employees may meet troubles such as contacting and organizing a date and time, arranging accommodation, etc.
- 4) In addition, sometimes you have to find children facility or other health care for the meeting participants.

32.Vegetarian #061032

(仅大意, 非原文 *Only the gist, not the original text.*)

- 1) Vegetarians do not eat meat or fish in their diet.
- 2) This diet is not only unattractive, but also may cause nutritional imbalance if not managed well.
- 3) Restaurants and school cafeteria adjust and amend their menus to adapt to this special diet.
- 4) Menus in all of these places have become more balance in nutrients, and also attract those who are not vegetarians.
- 5) These developments/improvements won't succeed without the effort of vegetarians.

33. Choose a School #061033

(仅大意, 非原文 *Only the gist, not the original text.*)

- 1) There are more than 100 schools in the country.
- 2) Never, if you can avoid it, accept the offer before going to the place and having a look. You should go and see once you have a chance.
- 3) This is important that you see the facilities and accommodations around the school.
- 4) Because you might be living off campus in the second year.

34. Heart Attack #061034

(仅大意, 非原文 *Only the gist, not the original text.*)

- 1) Heart attack is caused by the sudden blockage of a coronary artery by a blood clot.
- 2) When the clot is formed, it will stay in the blood vessels.
- 3) The clot in blood vessels will block blood flow.
- 4) Without the normal blood flow, it will cause muscle contraction.

35. Study Overseas #061035

(以下为确认原文 *Original text found and confirmed.*)

- 1) All over the world students are changing countries for their university studies.
- 2) They don't all have the same reasons for going or for choosing a particular place to study.
- 3) They may choose a university because of its interesting courses or perhaps because they like the country and its language.
- 4) Some students go overseas because they love travel.
- 5) Whatever the reason, thousands of students each year make their dreams of a university education come true.

36. Ancestors lit fire #061036

(仅大意, 非原文 *Only the gist, not the original text.*)

- 1) Many years ago, humans had been eating raw meat only.
- 2) Then they learned how to light a fire.
- 3) Since then humans started eating cooked meat.
- 4) And they also learned to cook many other food.

37. Scientific Dishonesty #061037

(以下为确认原文 *Original text found and confirmed.*)

- 1) I think we should be wary of the reporting of science - it is often over-dramatized in order to secure an audience - but not of science itself.
- 2) Of course, there may be the extremely rare example of scientific dishonesty, which will be seized upon by the news organisations, but the role of science within modern society remains valuable.

- 3) Mobile phones, for example, can cause incidents if drivers insist on talking on the phone instead of looking at roads.
- 4) But no one would deny that mobile phones can help us to make a phone call when we are under a crisis.
- 5) In other words I firmly believe that the development of science and the extension of understanding is a public good.

38. Carbon Pricing in Canada #061038

(以下为确认原文 *Original text found and confirmed.*)

- 1) There is a growing consensus that, if serious action is to be taken to reduce greenhouse gas (GHG) emissions in Canada, a price must be applied to those emissions.
- 2) There are, however, challenges associated with the political acceptability of carbon pricing.
- 3) If Canada implements a carbon price on its own, there are worries that Canadian factories will relocate to other countries to avoid the regulation.
- 4) Even if other countries act in concert with Canada to price carbon, the effects will be uneven across sectors, and lobbying efforts by relatively more-affected sectors might threaten the political viability of the policy.

39. Wal-Mart #061039

(以下为确认原文 *Original text found and confirmed.*)

- 1) Wal-Mart's core shoppers are running out of money much faster than a year ago due to rising gasoline prices, and the retail giant is worried, CEO Mike Duke said Wednesday.
- 2) "We're seeing core consumers under a lot of pressure," Duke said at an event in New York. "There's no doubt that rising fuel prices are having an impact."
- 3) Wal-Mart shoppers, many of whom live paycheck to paycheck, typically shop in bulk at the beginning of the month when their paychecks come in.
- 4) Lately, they're "running out of money" at a faster clip, he said.
- 5) "Purchases are really dropping off by the end of the month even more than last year," Duke said. "This end-of-month purchases cycle is growing to be a concern."

40. Color TV #061040

(以下为确认原文 *Original text found and confirmed.*)

- 1) Several systems of color television have been developed.
- 2) In the first color system, a motor-driven disk with segments in three primary colors—red, blue, and green—rotated behind the camera lens, filtering the light from the subject.
- 3) The receiving unit of this system formed monochrome, which is black-and-white images, through the usual cathode-ray tube.
- 4) This method is said to be field-sequential because the monochrome image is painted first in one color, then another, and finally in the third, in rapid enough succession so that the individual colors are blended by the retentive capacities of the eye, giving the viewer the impression of a full colored image.

41. Objectivity of Journalists #061041

(仅大意, 非原文 *Only the gist, not the original text.*)

- 1) Although experts like journalists are expected to be unbiased, they inevitably share the system biases of the disciplines and cultures in which they work.
- 2) Journalists try to be fair and objective by presenting all sides of a particular issues.
- 3) Practically speaking, however, it is about as easy to present all sides of an issue as it is to invite all candidates from all political parties to a presidential debate.
- 4) Some perspectives ultimately are not included.

42. Competence and Performance #061042

(以下为确认原文 *Original text found and confirmed.*)

- 1) In language learning there is a distinction between competence and performance. Competence is a state of the speaker's mind. What he or she knows?
- 2) Separate from actual performance – what he or she does while producing or comprehending language. In other words, competence is put to use through performance.
- 3) An analogy can be made to the Highway Code for driving. Drivers know the code and have indeed been tested on it to obtain a driving license.
- 4) In actual driving, however, the driver has to relate the code to a continuous flow of changing circumstances, and may even break it from time to time.

- 5) Knowing the Highway Code is not the same as driving.

43. Animals Exploratory Urge #061043

(以下为确认原文 *Original text found and confirmed.*)

- 1) All animals have a strong exploratory urge, but for some it is more crucial than others.
- 2) It depends on how specialized they have become during the course of evolution.
- 3) If they have put all their effort into the perfection of one survival trick, they do not bother so much with the general complexities of the world around them.
- 4) So long as the ant eater has its ants and the koala bear has gum leaves, then they are satisfied and the living is easy.
- 5) The non-specialists, however, the opportunists of the animal world, can never afford to relax.

44. Language #061044

(以下为确认原文 *Original text found and confirmed.*)

- 1) It is wrong, however, to exaggerate the similarity between language and other cognitive skills, because language stands apart in several ways.
- 2) For one thing, the use of language is universal—all normally developing children learn to speak at least one language, and many learn more than one.
- 3) By contrast, not everyone becomes proficient at complex mathematical reasoning, few people learn to paint well, and many people cannot carry a tune.
- 4) Because everyone is capable of learning to speak and understand language, it may seem to be simple.
- 5) But just the opposite is true—language is one of the most complex of all human cognitive abilities.

45. Electronic transactions #061045

(以下为确认原文 *Original text found and confirmed.*)

- 1) Cash transactions offer both privacy and anonymity as it does not contain information that can be used to identify the parties nor the transaction history.
- 2) Moreover, money is worth what it is because we have come to accept it.

英澳新三国（同一国家任意三所院校） 1093

免收服务费申请 扫码咨询

- 3) The whole structure of traditional money is built on faith and so will electronic money have to be.
- 4) Electronic transactions are happening in closed group networks and Internet. Electronic commerce is one of the most important aspects of Internet to emerge.
- 5) To support e-commerce, we need effective payment systems and secure communication channels and data integrity.

46.Memory and habits #061046

(以下为确认原文 *Original text found and confirmed.*)

- 1) In 1992 a retired engineer in San Diego contracted a rare brain disease that wiped out his memory.
- 2) Every day he was asked where the kitchen was in his house, and every day he didn't have the foggiest idea.
- 3) Yet whenever he was hungry he got up and propelled himself straight to the kitchen to get something to eat.
- 4) Studies of this man led scientists to a breakthrough: the part of our brains where habits are stored has nothing to do with memory or reason.
- 5) It offered proof of what the US psychologist William James noticed more than a century ago that humans "are mere walking bundles of habits"

47.Father-Led Literacy Project #061047

(以下为确认原文 *Original text found and confirmed.*)

- 1) A University of Canberra student has launched the nation's first father-led literacy project, to encourage fathers to become more involved in their children's literacy.
- 2) Julia Bocking's Literacy and Dads (LADS) project aims to increase the number of fathers participating as literacy helpers in K-2 school reading programs at Queanbeyan Primary Schools.
- 3) Having worked as a literacy tutor with teenagers, Ms. Bocking saw the need for good attitudes towards reading to be formed early on – with the help of male role models.
- 4) She said, "A male that values reading sets a powerful role model, particularly for young boys, who are statistically more likely to end up in remedial literacy programs."

48.Sydney's New Year Fireworks #061048

(以下为确认原文 *Original text found and confirmed.*)

- 1) Fireworks and special effects, including a red "waterfall" from the bridge base, will turn the structure built in 1932 into a giant Aboriginal flag shortly after the sun sets for the last time in 2015.
- 2) "It's about how we're all so affected by the harbour and its surrounds, how special it is to all of us and how it moves us," said the Welcome to Country's creative director, Rhoda Roberts.
- 3) From 8:40pm, the bridge will be turned into a canvas showing the Welcome to Country ceremony.
- 4) Fireworks and special effects will also turn the bridge into a giant Aboriginal flag before the 9pm fireworks display.

49.Stored Food #061049

(以下为确认原文 *Original text found and confirmed.*)

- 1) A consequence of a settled existence is that it permits one to store food surpluses, since storage would be pointless if one didn't remain nearby to guard the stored food.
- 2) So, while some nomadic hunter-gatherers may occasionally bag more food than they can consume in a few days, such a bonanza is of little use to them because they cannot protect it.
- 3) But stored food is essential for feeding non-food-producing specialists, and certainly for supporting whole towns of them.
- 4) Hence nomadic hunter-gatherer societies have few or no such full-time specialists, who instead first appear in sedentary societies.

50.Weather in Delhi #061050

(以下为确认原文 *Original text found and confirmed.*)

- 1) Normally in Delhi, September is a month of almost equatorial fertility and the land seems refreshed and newly-washed.
- 2) But in the year of our arrival, after a parching summer, the rains had lasted for only three weeks.

- 3) As a result, dust was everywhere and the city's trees and flowers all looked as if they had been lightly sprinkled with talcum powder.
- 4) Nevertheless, the air was still sticky with damp-heat, and it was in a cloud of perspiration that we began to unpack.

51.Scottish Banks #061051

(以下为确认原文 *Original text found and confirmed.*)

- 1) In most countries it is only the government, through their central banks, who are permitted to issue currency.
- 2) But in Scotland three banks are still allowed to issue banknotes.
- 3) The first Scottish bank to do this was the Bank of Scotland.
- 4) When this bank was founded in 1695, Scots coinage was in short supply and of uncertain value, compared with English, Dutch, Flemish or French coin.
- 5) To face growth of trade it was deemed necessary to remedy this lack of an adequate currency.

52.Search Engine Companies #061052

(以下为确认原文 *Original text found and confirmed.*)

- 1) In the lobby of an internet search engine company's headquarters in California, computer screens display lists of the words being entered into the company's search engine.
- 2) Although it says the system is designed to filter out any scandalous or potentially compromising queries, the fact that even a fraction of searches can be seen by visitors to the world's biggest search company is likely to come as a shock to internet users who think of web browsing as a private affair.
- 3) People generally believe that using a search engine is the equivalent of talking to a priest or a rabbi, "says Larry Ponemon, head of the Ponemon Institute, a privacy think-tank. "The public in general doesn't seem to fully understand how their privacy may be at risk.
- 4) However, that may be changing.
- 5) Over the past year, a series of privacy gaffes and government attempts to gain access to internet users' online histories have, along with consolidation among online search and advertising groups, thrust the issue of the issues of internet privacy into the spotlight.

- 6) This presents a challenge to internet search companies, which have built a multi-billion-dollar industry out of targeted advertising based on the information users reveal about themselves online.

53.Markets #061053

(以下为确认原文 *Original text found and confirmed.*)

- 1) Markets may be good at encouraging innovation and following trends, but they were no good at ensuring social equality.
- 2) These markets had become rapidly dominated by powerful enterprises who were able to act in their own interests, against the interests of both workers and consumers.
- 3) There had already been some legislation to prevent such abuses - such as various Factory Acts to prevent the exploitation of child workers.
- 4) Mill was able to see an expanded role for the State in such legislation to protect us against powerful interests.
- 5) He was able to argue that the State was the only organ that was genuinely capable of responding to social needs and social interests, unlike markets.

54.Ads #061054

(以下为确认原文 *Original text found and confirmed.*)

- 1) Over the years, I have had the opportunities to observe and understand the thought process behind the ads that have been flooding both the print and the TV.
- 2) Although there is a huge shift in the quality of ads that we come across on daily basis – thanks essentially to improvement in technology, I somehow can't help but feel that the quality of communication of the message has become diluted.
- 3) There is an increasing attempt by most companies to be seen as cool and funky.
- 4) Another reason could be the burgeoning number of companies, which means an exponential increase in the number of ads that are being made.
- 5) Proportionally, the numbers of ads that lack in quality have gone up exponentially as well.

55.3-D print #061055

(以下为确认原文 *Original text found and confirmed.*)

- 1) Researchers have developed a system that can 3-D print the basic structure of an entire building.
- 2) Structures built with this system could be produced faster and less expensively than traditional construction methods allow.
- 3) Even the internal structure could be modified in new ways; different materials could be incorporated as the process goes along.
- 4) Ultimately, the researchers say, this approach could enable the design and construction of new kinds of buildings that would not be feasible with traditional building methods.

56.False memories #061056

(以下为确认原文 *Original text found and confirmed.*)

- 1) False memories are constructed by combining actual memories with the content of suggestions received from others.
- 2) During the process, individuals may forget the source of the information.
- 3) This is a classic example of source confusion, in which the content and the source become dissociated.
- 4) Of course, because we can implant false childhood memories in some individuals in no way implies that all memories that arise after suggestion are necessarily false.

57.Communities of Ants #061057

(以下为确认原文 *Original text found and confirmed.*)

- 1) The communities of ants are sometimes very large, numbering even to 500, individuals
- 2) And it is a lesson to us that no one has ever yet seen quarrel between any two ants belonging to the same community.
- 3) However, it must be admitted that they are in hostility not only with most other insects, including ants of different species, but even with those of the same species if belonging to different communities.

- 4) I have over and over again introduced ants from one my nets into another nest of the same species; and they were invariably attacked, seized by a leg or an antenna, and dragged out.
- 5) It is evident, therefore, that the ants of each community all recognize one another, which is very remarkable.

58.Natural to be Healthy #061058

(以下为确认原文 *Original text found and confirmed.*)

- 1) It is natural to be healthy, but we have wandered so far astray that disease is the rule and good health the exception.
- 2) Of course, most people are well enough to attend to their work, but nearly all are suffering from some ill, mental or physical, acute or chronic.
- 3) The average individual is of less value to himself, to his family and to society than he could be.
- 4) His bad habits, of which he is often not aware, have brought weakness and disease upon him.
- 5) These conditions prevent him from doing his best mentally and physically.

59.Electronic device disposal / E-waste #061059

(仅大意, 非原文 *Only the gist, not the original text.*)

- 1) The invention of electronics has become a challenge.
- 2) An Indian university persuaded IT service department to have an Electronic Recycling Collection Day.
- 3) During these days, people are encouraged to recycle their e-waste instead of throwing them into the bin.
- 4) On certain days throughout the year, many electronic devices are collected and recycled from families and households.
- 5) 200,000 electronic products had been recycled in 2010.

60.Humanities 104 #061060

(以下为确认原文 *Original text found and confirmed.*)

- 1) A requirement of Humanities 104 is to write a persuasive paper on a topic of your choice.
- 2) The topic you choose should be supported by a range of sources.
- 3) The source should be cited under APA guidelines, and the final draft should be written in APA styles.
- 4) The final draft is due one week before the final exam.

61.City Mayors #061061

(以下为确认原文 *Original text found and confirmed.*)

- 1) Education scholars generally agree that mayors can help failing school districts.
- 2) They are starting, however, to utter warnings.
- 3) One review pointed to a certain big city mayor's style as an example of what not to do.
- 4) That mayor's aggressive control over schools was criticized for reducing parents' influence.

62.University of Otago #061062

(以下为确认原文 *Original text found and confirmed.*)

- 1) University of Otago Centre of International Health co-directors Professor Philip Hill and Professor John Crump share a view that global health is a multidisciplinary activity.
- 2) In their work – from Tanzania to the Gambia, from Myanmar to Indonesia and beyond – they tap into a wide range of expertise from across the University, including clinicians, microbiologists and molecular microbiologists, public health experts, economists and mathematicians.
- 3) They have also forged relationships and collaborations with research and aid agencies around the world.
- 4) For the past seven years Professor Philip Hill has been part of a collaborative tuberculosis research project in Indonesia, with the University of Padjadjaran in Bandung, West Java, undertaking European Commission-funded research into the causative links between infectious and non-communicable diseases – in this case tuberculosis (TB) – and diabetes mellitus.

63.The formation of the moon 月球的行成 #061063

(以下为确认原文 Original text found and confirmed.)

- 1) For more than 30 years, the prevailing view of the formation of our moon has been the "giant impact hypothesis".
- 2) The precursors to the current four rock planets – Mercury, Venus, Earth and Mars – appear to have been dozens of smaller bodies known as "planetary embryos".
- 3) According to the giant impact hypothesis, our moon formed as the result of the last of a series of "giant impact" mergers between planetary embryos that eventually formed the Earth.
- 4) In this last collision, one embryo was nearly Earth-sized and the other approximately Mars-sized.

64.How to answer questions in exams? #061064

- 1) Students probably don't know how to achieve high marks in exams.
- 2) Actually, you don't have to write down everything you know.
- 3) Before writing, you should figure out what the question is after, and what is not relevant.
- 4) And then you will have an idea of what you should write: write as many points as the number in the question indicates.
- 5) If there is a 'three', you should arrange your response as three points.

65.Opinion Compromise #061065

(以下为确认原文 Original text found and confirmed.)

- 1) In general, there is a tendency to underestimate how long it takes to discuss and resolve an issue on which two people initially have different views.
- 2) The reason is that achieving agreement requires people to accept the reality of views different from their own and to accept change or compromise.
- 3) It is not just a matter of putting forward a set of facts and expecting the other person immediately to accept the logic of the exposition.
- 4) They have to be persuaded and helped to feel comfortable about the outcome that is eventually agreed.

- 5) People need time to make this adjustment in attitude and react badly to any attempt to rush them into an agreement.

66. Arcelor-Mittal Takeover #061066

(以下为确认原文 *Original text found and confirmed.*)

- 1) Arcelor, established in Dutch, had been the largest European steel maker by 2006.
- 2) It was taken over by Mittal, a Dutch-registered company run from London by its biggest single shareholder, Lakshmi Mittal, an Indian who started his first business in Indonesia.
- 3) The takeover battle raged for six months before Arcelor's bosses finally listened to shareholders who wanted the board to accept Mittal's third offer.
- 4) The Arcelor-Mittal deal demonstrates Europe's deepening integration into the global economy.

67. Young Employees #061067

- 1) Employers are often reluctant to hire young people, even though there are more than 850,000 unemployed 16-to-24-year-olds and UK businesses are struggling to fill one in five vacancies because of skills shortages.
- 2) They are skeptical about young people's skills and their readiness for work.
- 3) But a growing number of companies are setting up schemes to recruit young workers.
- 4) They can be surprised by the results.

68. Martin Luther King #061068

(仅大意, 非原文 *Only the gist, not the original text.*)

- 1) Rosa Parks has a great impact on the civil rights movements.
- 2) She refused to give her bus seat to a white man.
- 3) The bus driver arrested her.
- 4) Her arrest had Martin Luther King's attention.
- 5) King then initiated a boycott on the bus system.

69.A \$300-House #061069

(以下为确认原文 *Original text found and confirmed.*)

- 1) When Vijay Govindarajan and Christian Sarkar wrote a blog entry on Harvard Business Review in August 2010 mooted the idea of a “\$300-house for poor”, they were merely expressing a suggestion.”
- 2) “Of course, the idea we present here is an experiment,” wrote Prof Govindarajan, a professor of international business at the Tuck School of Business at Dartmouth and Mr. Sarkar, a marketing consultant who works on environmental issues – an almost apologetic disclaimer for having such a “far-out” idea.
- 3) Who could create a house for \$300 and if it was possible, why hadn’t it been done before?
- 4) Nonetheless, they closed their blog with a challenge: “We ask chief executives, governments, NGOs, foundations: Are there any takers?”

70.Stem Cells #061070

(以下为确认原文 *Original text found and confirmed.*)

- 1) Embryonic stem cells are valued by scientists because the cells’ descendant can turn into any other sort of body cells.
- 2) These stem cells have been found in tissues such as the brain, bone marrow, blood, blood vessels, skeletal muscles, skin, and the liver.
- 3) They might thus be used as treatments for diseases that require the replacement of a particular, lost cell type.
- 4) Some example cited for a possible treatment using these cells are diabetes, motor neuron disease and Parkinson’s disease.

71.Children’s emotions #061071

(以下为确认原文 *Original text found and confirmed.*)

- 1) Most young children are inexperienced in dealing with emotional upheaval.
- 2) As a result, they lack the coping strategies that many adults have.
- 3) In particular, many young children lack the verbal skills to express their emotions and to effectively communicate their need for emotional support.

- 4) The frustration of not being able to effectively communicate may manifest itself in alternative behaviours.
- 5) Strategies that children may employ at this age are commonly referred to as defense mechanisms.

72.Financial crisis at young age #061072

(仅大意, 非原文 *Only the gist, not the original text.*)

- 1) Many people face serious financial crisis when they are only 20-30 years old.
- 2) This is because they do not really pay attention to their daily spending and has poured their spending on buying.
- 3) This will lead to them paying piling credit card loan and monthly payments.
- 4) Although they can have student loan, people should... (giving suggestion)

73.Sherbet Powder #061073

- 1) A reaction that needs some type of energy to make it go is said to be endothermic. It takes in energy.
- 2) For example, the sherbet you used for the chapter problem on page 25 is a mixture of baking soda and citric acid.
- 3) When it is mixed with water in your mouth, an endothermic reaction occurs, taking heat energy from your mouth and making it feel cooler.
- 4) Another example of an endothermic reaction is seen with the cold packs used by athletes to treat injuries. These packs usually consist of a plastic bag containing ammonium nitrate dissolves in the water.
- 5) This process is endothermic - taking heat energy from the surroundings and cooling the injured part of your body. In this way, the cold pack acts as an ice pack.

74.United Nations Conference #061074

- 1) Conferences have played a key role in guiding the work of the United Nations since its very inception.
- 2) In fact, the world body was born when delegates from 50 nations met in San Francisco in April 1945 for the United Nations Conference on International Organization.

英澳新三国 (同一国家任意三所院校) 1104

免收服务费申请 扫码咨询

- 3) The recent high-profile conferences on development issues, which have continued a series that began in the 1970s, have broken new ground in many areas: by involving Presidents, Prime Ministers and other heads of state - as pioneered at the 1990 World Summit for Children.
- 4) These events have put long-term, difficult problems like poverty and environmental degradation at the top of the global agenda.
- 5) These problems otherwise would not have the political urgency to grab front-page headlines and command the attention of world leaders.

75.Artificial Intelligence #061075

(以下为确认原文 *Original text found and confirmed.*)

- 1) RESEARCHERS in the field of artificial intelligence have long been intrigued by games, and not just as a way of avoiding work.
- 2) Games provide an ideal setting to explore important elements of the design of cleverer machines, such as pattern recognition, learning and planning.
- 3) Ever since the stunning victory of Deep Blue, a program running on an IBM supercomputer, over Gary Kasparov, then world chess champion, in 1997, it has been clear that computers would dominate that particular game.
- 4) Today, though, they are pressing the attack on every front.

76.Silent Students in Tutorials #061076

- 1) Many students sit in a tutorial week after week without saying anything.
- 2) Why is that?
- 3) Maybe they do not know the purpose of a tutorial.
- 4) They think it is like a small lecture where the tutor gives them information.
- 5) Even if students do know what a tutorial is for, there can be other reasons why they keep quiet.

77.Amino Acid #061077

- 1) Amino acid, which is also known as Leucine, is a fundamental element in the muscle's formation.
- 2) animals' protein has a 9-13% of the Leucine, and plants' protein has 7% of Leucine.
- 3) Plus, (动物和植物在另一方面的数据对比)
- 4) However, there are also some exceptions exist.

78.Diversity in the sea #061078

- 1) In order to establish whether diversity matters in the sea as well as on land, 11 marine biologists, along with three economists, have joined forces.
- 2) They have spent the past three years crunching all the numbers they could lay their hands on.
- 3) These ranged from the current UN Food and Agriculture Organization's database to information hundreds of years old, gleaned from kitchen records and archeology.
- 4) The results of this comprehensive analysis have been published in Science.

79.The Job of a Manager #061079

- 1) The job of a manager in the workplace is to get things done through employees.
- 2) In order to accomplish this, the manager should be able to motivate employees.
- 3) That is, however, easier said than done.
- 4) Motivation practice and theory are difficult subjects, encompassing various disciplines.

80.BCGI Global Tree Search #061080

(以下为确认原文 *Original text found and confirmed.*)

- 1) A recent research has revealed that more than 60,000 species of trees are available globally.
- 2) The BCGI, a charity group, has compiled the list of trees on the basis of data gathered from its network of 500 member organizations.
- 3) The researchers claim to have collected information over a period of two years from sources including over 500 published contents and 80 experts in the BCGI's network.

- 4) The data will be kept updated with the discovery of new species or the extinction of some, said the researchers. All the data required for the world's trees is now available in one database, thanks to Global Tree Search.
- 5) The results of the research were published in the Journal of Sustainable Forestry.

81.Monash Student Ne Tan #061081

(以下为确认原文 *Original text found and confirmed.*)

- 1) Mechanical engineering student Ne Tan is spending the first semester of this year studying at the University of California, Berkeley as part of the Monash Abroad program.
- 2) Ne, an international student from Shanghai, China, began her Monash journey at Monash College in October 2006.
- 3) There she completed a diploma that enabled her to enter Monash University as a second-year student.
- 4) Now in her third year of study, the Monash Abroad program will see her complete four units of study in the US before returning to Australia in May 2009.

82.Voice higher than 5khz #061082

(以下为确认原文 *Original text found and confirmed.*)

- 1) Previous studies have shown that humans are unable to recognize melodies whose notes have a fundamental tone above 5 kilohertz.
- 2) It was thought that, at frequencies this high, the rapidly cycling sound wave was too fast for the auditory nerve to cope with.
- 3) To test this theory, Andrew Oxenham and his colleagues at the University of Minnesota in Minneapolis asked a group of six students whether two four-note melodies were identical or not.
- 4) As in previous studies, the volunteers could not recognise melodies with fundamental tones above 5 kHz.

83. Sojourner #061083

(以下为确认原文 *Original text found and confirmed.*)

- 1) More recent missions to Mars include the hugely successful Mars Pathfinder, which landed a small 'rover' called Sojourner on the surface to explore a region where there may once have been life.
- 2) Sojourner has now been effectively switched off, but lasted almost twelve times its expected lifetime.
- 3) Similarly, the lander, which imaged several areas around the landing site (dubbed the Carl Sagan Memorial site) and took atmospheric measurements, lasted a good deal longer than expected.
- 4) The only unfortunate thing to have arisen from the mission is the naming of the rocks at the landing site (including everything from Scooby Doo to Darth Vader)

84. Sustainable Development #061084

(以下为确认原文 *Original text found and confirmed.*)

- 1) Whatever happened to the idea of progress and a better future? I still believe in both.
- 2) The Brundtland Report, our Common Future (1987) defines sustainable development as "development which meets the needs of the present without compromising the ability of future generations to meet their own needs."
- 3) Implicit in this definition is the idea that the old pattern of development could not be sustained. Is this true?
- 4) Development in the past was driven by growth and innovation. It led to new technologies and huge improvements in living standards.
- 5) To assume that we know what the circumstances or needs of future generations will be is mistaken and inevitably leads to the debilitating sense that we are living on borrowed time.

85. Superpower #061085

- 1) The 'superpower' has international text, which means having control over resources ... political power.
- 2) In terms of superpower, it included ...

- 3) ... ‘green superpower’, ...
- 4) In addition to green energy superpower, company should meet the above global average ... emissions ... and ...

86. Bankruptcy #061086

(以下为确认原文 *Original text found and confirmed.*)

- 1) In Montana as elsewhere, companies that have acquired older mines respond to demands to pay for cleanup in either of two ways.
- 2) If the company is small, its owners may declare the company bankrupt, in some cases conceal its assets, and transfer their business efforts to other companies or to new companies that do not bear responsibility for cleanup at the old mine.
- 3) If the company is so large that it cannot claim that it would be bankrupted by cleanup costs, the company instead denies its responsibility or else seeks to minimize the costs.
- 4) In either case, either the mine site and areas downstream of it remain toxic, thereby endangering people, or else the U.S. federal government and the Montana state government pay for the cleanup through the federal Superfund and a corresponding Montana state fund.

87. Historical Records #061087

(以下为确认原文 *Original text found and confirmed.*)

- 1) Historical records, coins, and other date-bearing objects can help – if they exist. But even prehistoric sites contain records – written in nature’s hand.
- 2) The series of strata in an archaeological dig enables an excavator to date recovered objects relatively, if not absolutely.
- 3) However, when archaeologists want to know the absolute date of a site, they can often go beyond simple stratigraphy.
- 4) For example, tree rings, Dendrochronology (literally, tree time), dates wooden artefacts by matching their ring patterns to known records, which, in some areas of the world, span several thousand years.

88. Music record in Brazil #061088

(以下为确认原文 *Original text found and confirmed.*)

- 1) Early in 1938, one Folklore Research Mission dispatched to the north-eastern hinterlands of Brazil on a similar mission.
- 2) The musiologists' intention was to record as much music as possible as quickly as possible, before encroaching influences like radio and cinema began transforming the region's distinctive culture.
- 3) They recorded whoever and whatever seemed to be interesting: piano carriers, cowboys, beggars, voodoo priests, quarry workers, fishermen, dance troupes and even children at play.
- 4) Regrettably, the Brazilian mission's collection ended up languishing in vaults here.

89. Easier said than Done #061089

(以下为确认原文 *Original text found and confirmed.*)

- 1) In 'Easier Said than Done', we set out some of the reasons why we might find it hard to live in a healthy way, exercising, eating well, getting adequate sleep, and checking for early warning symptoms.
- 2) Perhaps most importantly, we look to the field of behavioural science for strategies that people can use to overcome those hurdles and to initiate lifestyle changes.
- 3) These include Commitment devices, where we make it very unattractive to not follow through on an intention.
- 4) Changing existing behaviour can be a difficult task, but with the help of these strategies new behaviours can become habitual, facilitating a long-term sustained healthy lifestyle.

90. 伦敦不夜城 #061090

- 1) 伦敦变成不夜城
- 2) This change 的背后.....
- 3) 原因是因为街上安装了电灯
- 4) This invention

91.Grasses 小草 #061091

- 1) Grasses comes out and grows.
- 2) They grow up and become saplings, which shade the lawn down below.
- 3) The saplings will become big trees and then forests.
- 4) Farmlands always comes from forests.
- 5) If abandoned, things will start over again.

92.Science and technology #061092

(以下为确认原文 Original text found and confirmed.)

- 1) It is a truism to say that in 21st century society science and technology are important.
- 2) Human existence in the developed world is entirely dependent on some fairly recent developments in science and technology.
- 3) Whether this is good or bad is, of course, up for argument
- 4) But the fact that science underlies our lives, our health, our work, our communications, our entertainment and our transport is undeniable.

93.Accounting System #061093

(以下为确认原文 Original text found and confirmed.)

- 1) Are there any systems that can measure the Accounting system?
- 2) Well, there is accounting software describes a type of application software that records and processes accounting transactions within functional modules such as accounts payable, accounts receivable, payroll, and trial balance.
- 3) This enables the access anywhere at any time with any device which is Internet enabled, or may be desktop based. It varies greatly in its complexity and cost.
- 4) These tools combine together to provide quality customer service and create a climate of confidence, a customer service strategy that helps meet the specific needs.

94. Earthquake in San Francisco #061094

(以下为确认原文 *Original text found and confirmed.*)

- 1) At 5:12 a.m. on April 18, 1906, the people of San Francisco were awakened by an earthquake that would devastate the city.
- 2) The main temblor, having a 7.7–7.9 magnitude, lasted about one minute and was the result of the rupturing of the northernmost 296 miles of the 800-mile San Andreas fault.
- 3) But when calculating destruction, the earthquake took second place to the great fire that followed.
- 4) The fire, lasting four days, most likely started with broken gas lines (and, in some cases, was helped along by people hoping to collect insurance for their property—they were covered for fire, but not earthquake, damage).

95. Games affect brains #061095

(以下为确认原文 *Original text found and confirmed.*)

- 1) Palaus and his colleagues wanted to see if any trends had emerged from the research to date concerning how video games affect the structure and activity of our brains.
- 2) They collected the results from 116 scientific studies, 22 of which looked at structural changes in the brain and 100 of which looked at changes in brain functionality and/or behavior.
- 3) The studies show that playing video games can change how our brains perform, and even their structure.
- 4) For example, playing video games affects our attention, and some studies found that gamers show improvements in several types of attention, such as sustained attention or selective attention.

96. Copernicus's Heliocentric Theory #061096

(以下为确认原文 *Original text found and confirmed.*)

- 1) Copernicus probably hit upon his main idea sometime between 1508 and 1514.
- 2) For years, however, he delayed publication of his controversial work, which contradicted all the authorities of the time.

- 3) The historic book that contains the final version of his theory, *De Revolutionibus Orbium Coelestium Libri VI* (“Six Books Concerning the Revolutions of the Heavenly Orbs”), did not appear in print until 1543, the year of his death.
- 4) According to legend, Copernicus received a copy as he was dying, on May 24, 1543.
- 5) The book opened the way to a truly scientific approach to astronomy. It had a profound influence on later thinkers of the scientific revolution, including such major figures as Galileo, Johannes Kepler, and Isaac Newton.

97. Music and Language #061097

- 1) Oral literature is ...(definition of oral literature)... written language.
- 2) Stories, poetry have been passing messages from generation to generation.
- 3) Music is conveyed orally only, until the 11th century when physical instruments were invented to perform music.
- 4) It was hard to teach music.
- 5) But now it's easy.

98. Fibers for clothing #061098

- 1) Fibers suitable for clothing have been made for the first time from the wheat protein gluten.
- 2) The fibers are as strong and soft as wool and silk.
- 3) However, up to 30 times cheaper.
- 4) Narendra Reddy and Yiqi Yang, who produced the fibers at the University of Nebraska in Lincoln. He says that because they are biodegradable, they might be used in biomedical applications such as surgical sutures.

99. Native English Speaker #061099

- 1) Anyone wanting to get to the top of international business, medicine or academia (but possibly not sport) needs to be able to speak English to a pretty high level.
- 2) Equally, any native English speaker wanting to deal with these new high achievers needs to know how to talk without baffling them.

- 3) Because so many English-speakers today are monoglots, they have little idea how difficult it is to master another language.
- 4) Many think the best way to make foreigners understand is to be chatty and informal.
- 5) This may seem friendly but, as it probably involves using colloquial expressions, it makes comprehension harder.

100. Client Management System #061100

- 1) You may have heard about a client management system that can collaborate clients' data.
- 2) If we have such a system...
- 3) Now we have this system...
- 4) This system can benefit ...
- 5) Once you have this system, even those people who don't understand management can use it well.

101. Validity & Reliability #061101

- 1) Psychologists measure results in terms of validity and reliability.
- 2) Validity is defined as ...
- 3) For example, when a survey is asking about someone's personality, it shouldn't ask him chemistry questions.
- 4) Meanwhile, a survey also values reliability.

102. Hip Hop Culture #061102

- 1) Hip Hop culture emerged as a reaction to the gang culture and violence of the South Bronx in the 1970s, and daily experiences of poverty, racism, exclusion, crime, violence, and neglect.
- 2) It necessarily embodies and values resilience, understanding, community and social justice.
- 3) Without these, Hip Hop culture would never have been, and it is because these values remain at its core that Hip Hop is such a powerful agent of positive social change around the world.
- 4) Yet, the Hip Hop project is not yet free from these difficult circumstances.

英澳新三国（同一国家任意三所院校） 1114

103. Copernicanism #061103

- 1) The expanding influence of Copernicanism through the seventeenth century transformed not only the natural philosophic leanings of astronomers but also the store of conceptual material accessible to writers of fiction.
- 2) During this period of scientific revolution, a new literary genre arose, namely that of the scientific cosmic voyage.
- 3) Scientists and writers alike constructed fantastical tales in which fictional characters journey to the moon, sun, and planets.
- 4) In so doing, they discover that these once remote worlds are themselves earth-like in character.
- 5) Descriptions of these planetary bodies as terrestrial in kind demonstrate the seventeenth-century intellectual shift from the Aristotelian to the Copernican framework.

104. EU Fish Problems #061104

- 1) The European Union has two big fish problems.
- 2) One is that, partly as a result of its failure to manage them properly, its own fisheries can no longer meet European demand.
- 3) The other is that its governments won't confront their fishing lobbies and decommission all the surplus boats.
- 4) The EU has tried to solve both problems by sending its fishermen to West Africa. Since 1979 it has struck agreements with the government of Senegal, granting our fleets access to its waters.
- 5) As a result, Senegal's marine ecosystem has started to go the same way as ours.

105. New Ventures #061105

- 1) New Ventures is a program that helps entrepreneurs in some of the world's most dynamic, emerging economies-- Brazil, China, Colombia, India, Indonesia and Mexico.
- 2) We have facilitated more than \$203 million in investment, and worked with 250 innovative businesses whose goods and services produce clear, measurable environmental benefits, such as clean energy, efficient water use, and sustainable agriculture.

- 3) Often they also address the challenges experienced by the world's poor.
- 4) For example, one of the companies we work with in China, called Eco-star, refurbishes copy machines from the United States and re-sells or leases them for 20 percent less than a branded photocopier.

106. Glow Worms #061106

- 1) The Newnes railroad was closed in 1932 after 25 years of shipping oil shale.
- 2) The rails were pulled out of the 600-meter tunnel, which had been bored through the sandstone in the Wollemi National Park, and the tunnel was left to its own devices.
- 3) For Newnes, that meant becoming home to thousands and thousands of glow worms.
- 4) The glow worm is a catch-all name for the bioluminescent larvae of various species, in this case, the *Arachnocampa richardsae*, a type of fungus gnat.
- 5) Found in massive numbers in caves, the fungus gnat larvae cling to the rocky walls of the abandoned tunnel and hunt with long, glowing strings of sticky mucus.

107. Puzzle #061107

- 1) When I was a young scholar, I do a ... research that change my perception...
- 2) I invited one student from their school each time, set them comfort and then give them a puzzle.
- 3) One is very easily, another is very hard.
- 4) The students do the question with confuse and....
- 5) I observe their behavior and record their strategies

108. Festival in the Desert #061108

- 1) The "Festival in The Desert" is a celebration of the musical heritage of the Touareg, a fiercely independent nomadic people.
- 2) It is held annually near Essakane, an oasis some 40 miles north-west of Timbuktu, the ancient city on the Niger River.
- 3) Reaching it tests endurance, with miles of impermanent sand tracks to negotiate.
- 4) The reward of navigating this rough terrain comes in the form of a three-day feast of music and dance.

109. International Economics #061109

- 1) International Economics: Theory and Policy is a proven approach in which each half of the book leads with an intuitive introduction to theory and follows with self-contained chapters to cover key policy applications.
- 2) The Eighth Edition integrates the latest research, data, and policy in hot topics such as outsourcing, economic geography, trade and environment, financial derivatives, the subprime crisis, and China's exchange rate policies.
- 3) New for the Eighth Edition, all end-of-chapter problems are integrated into MyEconLab, the online assessment and tutorial system that accompanies the text.
- 4) Students get instant, targeted feedback, and instructors can encourage practice without needing to grade work by hand.

110. Green Tea Health Benefits #061110

- 1) In May 2006, researchers at Yale University School of Medicine weighed in on the issue with a review article that looked at more than 100 studies on the health benefits of green tea.
- 2) They pointed to what they called an "Asian paradox," which refers to lower rates of heart disease and cancer in Asia despite high rates of cigarette smoking.
- 3) They theorized that the 1.2 liters of green tea that is consumed by many Asians each day provides high levels of polyphenols and other antioxidants.
- 4) These compounds may work in several ways to improve cardiovascular health.
- 5) Specifically, green tea may prevent the oxidation of LDL cholesterol (the "bad" type), which, in turn, can reduce the buildup of plaque in arteries, the researchers wrote.

111. Musical Notion #061111

- 1) Over the years many human endeavours have had the benefit of language.
- 2) In particular a written language can convey a lot of information about past events, places, people and things.
- 3) But it is difficult to describe music in words, and even more difficult to specify a tune.
- 4) It was the development of a standard musical notation in the 11th century that allowed music to be documented in a physical form.

- 5) Now music could be communicated efficiently, and succeeding generations would know something about the music of their ancestors.

112. Taking Lecture Notes #061112

- 1) Your main job in taking lecture notes is to be a good listener.
- 2) To be a good listener, you must learn to focus and concentrate on the main points of the lecture.
- 3) Get them down, and then later reorganize them in your own words.
- 4) Once you have done this, you have set the stage for successful reviewing and revising.

113. Australia's native plants and animals #061113

- 1) Australia's native plants and animals adapted to life on an isolated continent over millions of years.
- 2) Since European settlement they have had to compete with a range of introduced animals for habitat, food and shelter.
- 3) Some have also had to face new predators.
- 4) These new pressures have also caused a major impact on our country's soil and waterways and on its native plants and animals.

114. Internship #061114

- 1) During the school year, we had the benefit of being both unaccountable and omnipotent.
- 2) Insulated from the consequences of such decisions, and privy to all critical information about the case, we were able to solve complex business problems with relative ease.
- 3) We knew that once we began our internships, this would no longer be the case.
- 4) The information would be more nebulous and the outcomes of our decisions would be unpredictable.
- 5) So in approaching this impending summer period, what lingered in the back of our minds was a collectively felt, unspeakable thought: "Were we really up to the challenge?"

115. Pidgins #061115

- 1) In some areas, the standard chosen may be a variety that originally had no native speakers in the country.
- 2) For example, in Papua New Guinea, a lot of official business is conducted in Tok Pisin.
- 3) This language is now used by over a million people, but it began many years earlier as a kind of 'contact' language called a pidgin.
- 4) A pidgin is a variety of a language (e.g. English) that developed for some practical purpose, such as trading, among groups of people who had a lot of contact, but who did not know each other's languages.

116. Sea Level Rise #061116

- 1) Sea level rise led to 36 thousand people die every year.
- 2) This number can be raised if sea level ceaseless goes up, scientists notified.
- 3) According to the research, if sea level rises 50 centimeters, 86 million people will die.
- 4) If sea level rises 1 meter, 168 million people will die all around the world.

117. Fruit and Vegetable Intake #061117

- 1) Fruit and vegetable intake is important for the prevention of future chronic disease, so it's important to know whether intakes of teens are approaching national objectives for fruit and vegetable consumption.
- 2) Larson and colleagues from the University of Minnesota undertook the study to examine whether or not teens in the state were increasing their intake of fruits and vegetables.
- 3) The study gathered information about fruit and vegetable intake among 944 boys and 1,161 girls in 1999 and again in 2004.
- 4) Teens in middle adolescence are eating fewer fruits and vegetables than in 1999, Larson and colleagues found.
- 5) This is giving us the message that we need new and enhanced efforts to increase fruit and vegetable intake that we haven't been doing in the past.

118. Blue Halos #061118

- 1) Latest research has found that several common flower species have nanoscale ridges on the surface of their petals that meddle with light when viewed from certain angles.
- 2) These nanostructures scatter light particles in the blue to ultraviolet colour spectrum, generating a subtle effect that scientists have christened the 'blue halo'.
- 3) By manufacturing artificial surfaces that replicated 'blue halos', scientists were able to test the effect on pollinators, in this case foraging bumblebees.
- 4) They found that bees can see the blue halo, and use it as a signal to locate flowers more efficiently.

119. Japanese girl leaning English #061119

- 1) This paper summarizes some of the major data gathered in a longitudinal, naturalistic study of a Japanese girl learning English as a second language.
- 2) The subject in this study is Uguisu, “nightingale” in Japanese.
- 3) Her family came to the United States for a period of two years while her father was a visiting scholar at Harvard, and they took residence in North Cambridge, a working-class neighbourhood.
- 4) The children in that neighbourhood were her primary source of language input.
- 5) Uguisu also attended public kindergarten of two hours every day, and later elementary school, but with no tutoring in English syntax. Most of her neighbourhood friends were in her same class at school.

120. The Takeover Battle #061120

- 1) It was taken over by Mittal, a Dutch-registered company run from London by its biggest single shareholder, Lakshmi Mittal, an Indian who started his first business in Indonesia.
- 2) The takeover battle raged for six months before Arcelor's bosses finally listened to shareholders who wanted the board to accept Mittal's third offer.
- 3) The story tells us two things about European business, both positive.
- 4) Shareholder activism is increasing in a continent where until recently it was depressingly rare.

- 5) And more important, the Arcelor-Mittal deal demonstrates Europe's deepening integration into the global economy.

121. Turkey and Mars #061121

- 1) If you want to visit Mars, visit Turkey.
- 2) That's where you'll find lakes so salty that the only bugs able to live there are species that could probably survive on Mars as well.
- 3) For that reason, microbiologists in Turkey have surveyed the array of species that inhabit the Acigol, Salda and Yarisli lakes.
- 4) They're hopeful that studying some of them will yield useful insights into the kinds of biology that could help microbes exist on Mars or other potentially habitable planets and moons.

122. Wandering minds #061122

- 1) Researchers studied groups of people from the University of Wisconsin-Madison community, ranging in age from 18 to 65.
- 2) The first group was asked to perform simple tasks, like pressing a button every time they took a breath or clicking in response to a letter popping up on a computer screen; these tasks were so easy that their minds were likely to wander, the researchers figured.
- 3) The researchers checked in periodically, asking the participants if their minds were on task or wandering.
- 4) When the task was over, they measured each participant's working memory capacity by having them remember letters while doing math equations.
- 5) Though all participants performed well on the task, the researchers noticed that the individuals who indicated their minds had wandered more than others also scored higher on the working memory test.

123. Gender stereotype #061123

疑似原文，待修正补充

- 1) The research by Will and colleagues dressed 6-month-old babies in different colored outfits that did not necessarily match their gender, so the participants had no way of knowing if the baby was in fact a boy or a girl.
- 2) Sometimes, the infant was dressed in blue and was called Adam and sometimes it was dressed in pink and was called Beth.
- 3) There were three toys in the room: a train (boy stereotype), a doll (girl stereotype) and a fish (neutral).
- 4) This study found that babies dressed in blue and thought to be boys were more likely to be given the train. Babies in pink or “girls” were more likely to be given the doll and more people smiled at “Beth” than at “Adam”.

124. German writer #061124

- 1) This site contains a comprehensive listing of the works of Norbert Elias, a German sociologist.
- 2) The site lists not only his published books and articles but also manuscripts and oral communications, in a variety of media and including reprints and translations.
- 3) The material has been catalogued, cross-referenced and organized by date.
- 4) There is, however, no search facility.

125. Ethiopian runners #061125

- 1) Dr Pitsiladis has spent years trying to identify why Ethiopian runners from the mountain region are so successful.
- 2) He began by taking DNA samples but found that they all had a very different genetic make-up.
- 3) From this he concluded that there was nothing that could be identified genetically as East African.
- 4) So he then looked at the East African way of life and found that as Children, 68 percent of all top Ethiopian or Kenyan runners ran, rather than walked, to school and back home, from the age of five onwards.

- 5) He tested those children and found that their bodies processed oxygen more efficiently than many adult elite athletes in Britain.

126. Rosa Parks #061126

同主题的另一篇请见#061068

- 1) It was there that Rosa Parks, an African American woman, refused to vacate her seat in the middle of the bus so that a white man could sit in her place.
- 2) She was arrested for her civil disobedience.
- 3) Park's arrest, a coordinated tactic meant to spark a grassroots movement, succeeded in catalyzing the Montgomery bus boycott.
- 4) Parks was chosen by King as the face for his campaign because of Parks' good standing with the community, her employment, and her marital status.

127. Manchester Medical School #061127

- 1) Formal medical education in Manchester began in 1814 when Joseph Jordan opened the first anatomy school in the English provinces.
- 2) Previous lecture courses in medicine had included a series given by Peter Mark Roget, then a physician at Manchester Infirmary (1804–8), but better known for his later Thesaurus.
- 3) Jordan, however, offered dissections as well as lectures, and medical education proved good business.
- 4) In London the private anatomy schools, which had competed with each other for decades, became incorporated with the hospitals, but in the provinces private medical schools continued beyond 1870, using the hospitals for clinical teaching but not formally attached to them.

128. Writing a book #061128

根据考生回忆编写，并非原文

- 1) For many years, I had been thinking of writing a book.
- 2) Not an ordinary book, but a literature book.

- 3) I would do extensive literature reading and think about how I could do as well as they had done.
- 4) What I did is what you will need to do.

129. School open days #061129

根据考生回忆编写，并非原文

- 1) School has different ways to let parents know how they provide education services.
- 2) One of the common ways is open days.
- 3) Open days are good chances for parents to ask what they want to know.
- 4) There are times when parents can know what works for their children will be doing at school.

130. Marshmallow test #061130

- 1) A four-to-six-year-old child sits alone in a room at a table facing a marshmallow on a plate.
- 2) The child is told: If you don't eat this treat for 15 minutes you can have both this one and a second one.
- 3) Kids on average wait for five or six minutes before eating the marshmallow.
- 4) The longer a child can resist the temptation has been correlated with higher general competency later in life.

131. British marine energy #061131

- 1) By 2100, human-induced climate change threatens to raise temperatures by 2-4°C and push up tide-lines by 4-6m.
- 2) The government has promised to help counter this global trend by reducing UK carbon emissions 80 per cent from 1990 levels by 2050.
- 3) And with the second largest tidal range in the world, British marine energy could play an important role in this shift.
- 4) But harnessing the power of the tides is not without consequence.
- 5) In 2013, plans to construct a £34bn barrage across the Severn estuary were rejected after concerns were raised about its effect on local ecosystems.

132. Reading #061132

- 1) Humans appear to be the only species which is able to translate their communication into another medium, and in this case the medium provides a semi-durable record of the elements of the communication.
- 2) So reading is a very special ability that we have.
- 3) Reading also is special because, unlike language, most children have to be taught to read, write and spell.
- 4) So, though we may be predisposed to being able to read and usually have the abilities necessary to master reading, it is something that most of us only accomplish through the direct help of others.

133. DRM #061133

- 1) Due to its ability to solve all main problems associated with digital goods, Digital Rights Management is the favorite option used by companies to tackle privacy.
- 2) The aim of this article is to discuss the consequences of DRM for consumers, firms and society.
- 3) The rationales of DRM are discussed and the expected benefits for firms are presented.
- 4) In contrast, consumers are shown to be likely to see few benefits in DRM.
- 5) The article concludes with some public policy recommendations.

134. Computational thinking #061134

- 1) Many of us happily drive a car without understanding what goes on under the bonnet.
- 2) So is it necessary for children to learn how to program computers?
- 3) After all, some experts say coding is one of the human skills that will become obsolete as artificial intelligence grows.
- 4) Nevertheless, governments believe coding is an essential skill.

135. Big Country Snake Removal #061135

- 1) Big Country Snake Removal responded to a home in Albany, Texas, after a man who was trying to restore his cable, climbed under the house and saw some snakes.

- 2) "He saw a 'few' snakes and quickly crawled out," said a post on Big Country Snake Removal's Facebook page.
- 3) "We arrived around lunchtime and as soon as I crawled under I could immediately see that there was far more than a 'few,'" the post said.
- 4) The company ended up removing 45 rattlesnakes from beneath the house.

136. Worm Conservation #061136

- 1) Not all wildlife is created equal in our eyes.
- 2) Take the earthworm, which doesn't have the widespread appeal of larger, more charismatic animals such as gorillas, tigers or pandas.
- 3) Worms are never going to get a strong "cute response", and they won't ever be the face of a conservation campaign.
- 4) But what Darwin rightly recognized is that - panda fans avert your eyes - worm conservation is much more important once we factor in their provision of what we now call "ecosystem services", which are crucial to human survival.

137. Hudson #061137

- 1) Aboard the ship Discovery, Hudson left England in April 1610.
- 2) He and his crew, which again included his son John and Robert Juet, made their way across the Atlantic Ocean.
- 3) After skirting the southern tip of Greenland, they entered what became known as the Hudson Strait.
- 4) The exploration then reached another of his namesakes, the Hudson Bay.

138. Short-term memory #061138

- 1) Short-term memory (SMT) can hold information anywhere between 15-30 seconds.
- 2) According to Miller's Magical Number Seven (1956), short-term memory has a limited capacity, being able to store 5 to 9 items simultaneously.
- 3) However, if we hear concepts or ideas repeatedly in an audio form we can acoustically encode the information.
- 4) It is a process referred to as "rehearsal", thereby committing it to our long-term memories.

139. Calves and milk #061139

- 1) To gauge optimism and pessimism, the researchers set up an experiment involving 22 calves.
- 2) Before they started the experiment, they trained the calves to understand which of their choices would lead to a reward.
- 3) In the training, each calf entered a small pen and found a wall with five holes arranged in a horizontal line, two-and-a-half feet apart.
- 4) The hole at one end contained milk from a bottle, while the hole at the opposite end contained only an empty bottle and delivered a puff of air in calves' faces.
- 5) The calves learned quickly which side of the pen held the milk reward.

140. Eating habits #061140

- 1) Researchers surveyed more than 2,000 young people about their eating habits in 1999.
- 2) When they surveyed the same group five years later, most of the teenagers were eating fewer fruits and vegetables.
- 3) The researchers, led by Nicole I. Larson of University of Minnesota School of Public Health, found two dips in the intake of fruits and vegetables during the teenage years.
- 4) The first occurred in early adolescence, when consumption went down by more than half a serving.
- 5) The second came in late adolescence and was about the same size as the first.

141. Staff motivation #061141

- 1) Numbers of staff who wish to turn up and do a simple job and go home is relatively happy if they believe their work is secure.
- 2) However, any employee who wants to acquire more varied and responsible duties will not feel satisfied for long staying with the same and boring job.
- 3) People want to keep working hard only if there are opportunities for promotion to a more challenging job.
- 4) If this opportunity does not exist, they are most likely to be demotivated.

142. Elephant and drones #061142

- 1) Earlier this year, researchers from Duke University went to Gabon to monitor that country's dwindling elephant population. They took along three drones, which they planned to use to count the elephants, follow their herds, and map their migrations.
- 2) Only things didn't exactly go as planned.
- 3) The elephants noticed the drones, which hovered anywhere from 25 feet to 300 feet above them.
- 4) And it wasn't just that the elephants noticed them; in many cases, the elephants were clearly agitated. Some of them took off running. In at least one case, an elephant used her trunk to hurl mud in the drone's direction.
- 5) The elephants reacted so strongly, the researchers believe, because drones, it turns out, sound a lot like bees. And elephants do not like bees. At all.

143. Wild Pandas #061143

- 1) We know very little about wild pandas because they are so rare and live in almost impenetrable forest.
- 2) But in 2010 and 2011, Vanessa Hull of Michigan State University and her colleagues were given permission to attach GPS tracking collars to five pandas in the Wolong National Nature Reserve in China.
- 3) The collars transmitted each animal's position every four hours, for up to two years.
- 4) The team found that the home ranges of individual pandas overlapped and on a few occasions, two animals spent several weeks in close proximity. "Sometimes the pandas were within 10 or 20 metres of each other, which suggests the pandas were in direct interaction," Hull says.

144. The Internet of Things #061144

- 1) Decades ago, we connected computers and got today's powerful Internet.
- 2) In the last few years, we started to connect everyday objects using machine-to-machine (M2M) technologies, to create the Internet of Things.
- 3) But what does this really mean to you, your company and your country?
- 4) What are the possibilities it offers, and the threats it poses?

145. Children's clothes #061145

- 1) During the past few years, some of the world's biggest names in high-end fashion have begun to see children's clothes as a promising sideline with which to extract more value from their main business.
- 2) Jean Paul Gaultier, Chloe and John Galliano have all launched children's clothes lines.
- 3) But for France's Bonpoint, making kids' clothing is the main business.
- 4) Since Bonpoint was founded 40 years ago by clothes store owner Marie-France and Bernard Cohen, children and babies have been at the centre of the brand's development.

146. Rugby in Wales #061146

- 1) Citizens commonly identify with their nation in the context of major sporting events: imagining the nation is easier when there is a national team playing another nation (Hobsbawm, 1990).
- 2) Rugby in Wales is a particularly strong example of this phenomenon, being perhaps the main thing that unites people in Wales.
- 3) In many ways rugby in Wales defines what Wales is and what people in Wales share.
- 4) From outside Wales, too, it is the rugby that commonly defines the nation - with the sport providing both widespread interest and one of the few positive associations of outsiders' perceptions of Wales.

147. Choices in history #061147

- 1) History is selective.
- 2) What history books tell us about the past is not everything that happened, but what historians have selected.
- 3) They cannot put in everything: choices have to be made.
- 4) Choices must similarly be made about which aspects of the past should be formally taught to the next generation in the shape of school history lessons.

148. Photos of glaciers #061148

- 1) In 1997 Lisa McKeon, a physical scientist with the United States Geological Survey who works in the park, came across a pair of historic photographs depicting the glaciers she studies.
- 2) Over the years, countless photos of the majestic park have been snapped, and many of those have become part of the park's official archive, spanning over a century.
- 3) It was a light bulb moment: Why not use the old photos to create a timeline of the morphing glaciers, and add new photos every year?
- 4) The Repeat Photography Project was born.

149. Endothermic reaction #061149

- 1) A reaction that needs some type of energy to make it go is said to be endothermic. It takes in energy.
- 2) For example, the sherbet you used for the chapter problem on page 25 is a mixture of baking soda and citric acid.
- 3) When it is mixed with water in your mouth, an endothermic reaction occurs, taking heat energy from your mouth and making it feel cooler.
- 4) Another example of an endothermic reaction is seen with the cold packs used by athletes to treat injuries. These packs usually consist of a plastic bag containing ammonium nitrate dissolves in the water.
- 5) This process is endothermic - taking heat energy from the surroundings and cooling the injured part of your body. In this way, the cold pack acts as an ice pack.

150. Totalitarianism #061150

- 1) Totalitarianism is a political and social concept that explains a form of government where the state has all control over the civilians.
- 2) Such government assumes full power, without any limitations.
- 3) As put by Juan Linz, a totalitarian scholar, the three main factors of a totalitarianism government are “a monistic center of power; an ideology developed, justified and pursued by the leadership; and mass participation in political and social goals encouraged and even demanded by that same leadership”

- 4) Throughout the 20th century, the manifestation of totalitarianism was an extreme measure of harsh political occurrences.

151. Noise level #061151

- 1) Some students say that they need complete quiet to read and study.
- 2) Others study best in a crowded, noisy room because the noise actually helps them concentrate. Some students like quiet music playing; others do not.
- 3) The point is, you should know the level of noise that is optimal for your own studying.
- 4) However, one general rule for all students is that the television seems to be more of a distraction than music or other background noise, so leave the TV off when you are reading or studying.

152. Professor Les Ebdon #061152

- 1) England's most selective universities must do more to attract teenagers from disadvantaged backgrounds if they want to charge higher tuition fees, the country's fair access watchdog has warned.
- 2) Professor Les Ebdon, director of Fair Access to Higher Education, has said universities can no longer make excuses about the number of poorer students they take on.
- 3) In a statement issued yesterday, Prof Ebdon dismissed the argument from the country's most selective universities, which claim that young people from poorer backgrounds generally secure worse grades.
- 4) Such defences from the country's most elite universities "do not hold water", Prof Ebdon said, as he urged the institutions to do more to widen their intakes.

153. Airbnb #061153

- 1) It was the summer of 2008 in San Francisco and a small company called Airbnb had a dream.
- 2) People with spare bedrooms would welcome strangers into their homes and share their restaurant recommendations with them for a small fee.
- 3) Fast forward to 2016 and the now quite big and successful Airbnb is considered one of the mainstays of what we have come to call "the sharing economy".

- 4) It is also, in every article written on millennials, the business that defines the mentality of a generation.

154. A review #061154

- 1) A review is a survey of what you have covered.
- 2) It is a review of what you are supposed to accomplish not what you are going to do.
- 3) Re-reading is an important part of the review process.
- 4) Re-read with the idea that you are measuring what you have gained from the process.

155. LiDARs #061155

- 1) Cameras help autonomous vehicles read street signs and the color of traffic lights.
- 2) But LiDARs, aka light detection and ranging systems, do the important work of sensing and helping cars avoid obstacles, whether that's a fallen tree, drunk driver, or a child running out into the road.
- 3) Now, a startup called Luminar Technologies Inc., is unveiling a high-resolution LiDAR sensor that was five years in the making.
- 4) The startup, which has raised \$36 million in seed-stage funding so far, built its LiDAR systems from scratch.
- 5) That means the company engineered its own: lasers, receivers, chips, packaging and more, rather than incorporating off-the-shelf components.

156. Writing a research report #061156

- 1) So now that you've completed the research project, what do you do?
- 2) I know you won't want to hear this, but your work is still far from done.
- 3) In fact, this final stage – writing up your research – may be one of the most difficult.
- 4) Developing a good, effective and concise report is an art form in itself.
- 5) And, in many research projects you will need to write multiple reports that present the results at different levels of detail for different audiences.

157. Vision and echolocation #061157

- 1) Vision and echolocation have many features in common.
- 2) One narrow range of radiation - light in the case of vision, ultrasounds in the case of echolocation - provides information relevant to a wide variety of cognitive and practical goals.
- 3) Why, then, is vision so common and echolocation so rare?
- 4) Because, in most environments, vision is much more effective.
- 5) Echolocation is adaptive only in an ecological niche where vision is impossible or badly impaired - for instance, when dwelling in caves and hunting at night, as bats do.

158. Restaurant location #061158

- 1) The physical location of a restaurant in the competitive landscape of the city has long been known as a major factor in its likely success or failure.
- 2) Once restaurants are established in such environments, they can do little about their location.
- 3) All they can do is work to improve customer access to their premises.
- 4) Restaurateurs often do this by engaging in battles with local authorities about car parking.

159. Feeding birds #061159

- 1) According to experts, feeding birds is probably the most common way in which people interact with wild animals today.
- 2) More than 50 million Americans engage in the practice, collectively undertaking an unwitting experiment on a vast scale.
- 3) Is what we're doing good or bad for birds?
- 4) Recently, researchers at the Cornell Lab of Ornithology sought to answer this question, analyzing nearly three decades' worth of data from a winter-long survey called Project Feeder Watch.
- 5) Preliminary results suggest the species visiting our feeders the most are faring exceptionally well in an age when one-third of the continent's birds need urgent conservation.

160. Understanding history #061160

- 1) The people and events of the past can only be understood when viewed within the larger context in which they existed.
- 2) That is not possible when historical events or topics are isolated and extracted from the web of historic time to serve some other curricular purpose.
- 3) The value of history also depends upon the chronological presentation of events through time.
- 4) It is only through a chronological survey that students can begin to understand the process of social and cultural change, which is one of the principal purposes of history.

161. Photogrammetry #061161

- 1) Photogrammetry involves taking hundreds of photos of an object at slightly different angles and ‘stitching’ them together to create an interactive digital 3D model.
- 2) The process is already being used by the University of Aberdeen’s anatomy department to create digital models of organs and other body parts to aid teaching and learning for young doctors.
- 3) Now the same technology is being used to create virtual replicas of artefacts within the University’s museum’s collections, including an ancient Egyptian mummified cat, prehistoric skulls and ancient Greek pottery.
- 4) These artefacts are rarely handled as they are so fragile.
- 5) Photogrammetry lets the public and students get to see them close-up and in very high detail.

162. Sleeping habits of animals #061162

- 1) A technology for recording brainwaves in wild animals could awaken a more sophisticated understanding of the function of sleep.
- 2) Studies using miniature sleep-recording devices known as neurologgers have already challenged several long-held beliefs about the sleeping habits of sloths and birds.
- 3) Three-toed sloths, for example, sleep far less than once thought.
- 4) And male sandpipers can go almost entirely without sleep during the three-week breeding season, helping maximize their success at that time.

- 5) Now, John Lesku of La Trobe University in Melbourne and his colleagues are using neurologgers to investigate whether light pollution interferes with the circadian rhythms of tammar wallabies in Australia.

163. Jean Briggs #061163

- 1) Jean Briggs has worked with the Inuit of the Canadian Arctic and has described how, within these communities, growing up is largely seen as a process of acquiring thought, reason and understanding (known in Inuit as ihuma).
- 2) Young children don't possess these qualities and are easily angered, cry frequently and are incapable of understanding the external difficulties facing the community, such as shortages of food.
- 3) Because they can't be reasoned with, and don't understand, parents treat them with a great deal of tolerance and leniency.
- 4) It's only when they are older and begin to acquire thought that parents attempt to teach them or discipline them.

164. First publication #061164

- 1) To celebrate his first publication, Frost had a book of six poems privately printed; two copies of Twilight were made—one for himself and one for his fiancée.
- 2) Over the next eight years, however, he succeeded in having only 13 more poems published.
- 3) During this time, Frost sporadically attended Dartmouth and Harvard and earned a living teaching school and, later, working a farm in Derry, New Hampshire.
- 4) But in 1912, discouraged by American magazines' constant rejection of his work, he took his family to England, where he found more professional success.

165. Hot-air balloons #061165

- 1) Hot-air balloons date back to the year 1783, and within a few months of the first flight a French scientist, Charles, went up two miles in a free balloon.
- 2) Yet there is little resemblance between these crude vehicles and a modern scientific balloon, which has by now become an important tool.

- 3) The main development has been carried out by M. Schwarlschild and his team at Princeton University in the United States, in collaboration with the United States Navy.
- 4) The 'Stratoscope' flights of 1959, concerned mainly with studies of the Sun, were remarkably successful.

166. English Agricultural Revolution #061166

- 1) Historians are now agreed that beginning in the 17th century and continuing throughout the 18th century, England witnessed an agricultural revolution.
- 2) English (and Dutch) farmers were the most productive farmers of the century and were continually adopting new methods of farming and experimenting with new types of vegetables and grains.
- 3) They also learned a great deal about manure and other fertilizers.
- 4) In other words, many English farmers were treating farming as a science, and all this interest eventually resulted in greater yields.

167. Playwrights #061167

- 1) Playwrights come to their craft with different aesthetic sensibilities.
- 2) They create recognizable worlds with troubling relevance to human behavior and social themes.
- 3) Others dismiss the “illusion of the real” to engage us in political arguments or absurdist metaphors.
- 4) Thornton Wilder and Tennessee Williams, on the one hand, and Bertolt Brecht and Samuel Beckett, on the other, are playwrights with very different approaches to empathy and aesthetic distance.
- 5) However, these writers have in common their means of artistic expression – the play.

168. Hand-axe #061168

- 1) Sometime about a million and a half years ago, some forgotten genius of the hominid world did an unexpected thing.
- 2) He (or very possibly she) took one stone and carefully used it to shape another.

- 3) The result was a simple teardrop-shaped hand-axe, but it was the world's first piece of advanced technology.
- 4) It was so superior to existing tools that soon others were following the inventor's lead and making hand-axes of their own.
- 5) Eventually whole societies existed that seemed to do little else.

169. Mars Pathfinder #061169

- 1) More recent missions to Mars include the hugely successful Mars Pathfinder, which landed a small 'rover' called Sojourner on the surface to explore a region where there may once have been life.
- 2) Sojourner has now been effectively switched off, but lasted almost twelve times its expected lifetime.
- 3) Similarly the lander, which imaged several areas around the landing site (dubbed the Carl Sagan Memorial site) and took atmospheric measurements, lasted a good deal longer than expected.
- 4) The only unfortunate thing to have arisen from the mission is the naming of the rocks at the landing site (including everything from Scooby Doo to Darth Vader).

170. Recording sleep #061170

- 1) A technology for recording brainwaves in wild animals could awaken a more sophisticated understanding of the function of sleep.
- 2) Studies using miniature sleep-recording devices known as neurologgers have already challenged several long-held beliefs about the sleeping habits of sloths and birds.
- 3) Three-toed sloths, for example, sleep far less than once thought.
- 4) And male sandpipers can go almost entirely without sleep during the three-week breeding season, helping maximise their success at that time.
- 5) Now John Lesku of La Trobe University in Melbourne and his colleagues are using neurologgers to investigate whether light pollution interferes with the circadian rhythms of tammar wallabies in Australia.

171. MBTI & the "Big Five" #061171

- 1) Some psychologists believe that independent, peer-reviewed research in the decades since the MBTI was devised has provided something better than Myers-Briggs.
- 2) They champion the notion of the “Big Five” personality traits — openness, conscientiousness, extroversion, agreeableness and neuroticism.
- 3) Of these, only one trait is closely shared with the MBTI — extroversion.
- 4) Myers-Briggs does not focus on “neuroticism” or, indeed, any similarly negative trait, which may point to one of the reasons why the criticisms lobbed at the test by modern science have yet to undermine its popularity.

172. Poincaré #061172

- 1) Poincaré had an especially interesting view of scientific induction.
- 2) Laws, he said, are not direct generalizations of experience; they aren’t mere summaries of the points on the graph.
- 3) Rather, the scientist declares the law to be some interpolated curve that is more or less smooth and so will miss some of those points.
- 4) Thus a scientific theory is not directly falsifiable by the data of experience; instead, the falsification process is more indirect.

173. West Antarctic Ice Sheet #061173

- 1) Scientists have known for over a decade that the West Antarctic Ice Sheet has been losing mass and contributing to sea level rise.
- 2) Its eastern neighbour is, however, ten times larger and has the potential to raise global sea level by some 50 metres.
- 3) Despite its huge size and importance, conflicting results have been published on the recent behaviour of the East Antarctic Ice Sheet.
- 4) A study led by a group of NASA scientists, that was published in 2015, suggested that this part of Antarctica was gaining so much mass that it compensated for the losses in the west.

174. The hottest ever Earth #061174

- 1) The Earth just had the hottest month in recorded history, and it's even worse than normal.
- 2) The record comes in a run of unprecedentedly hot months.
- 3) Not only does it break through the all-time record set a year before, it also continues a now 10-month long streak of months that are the hottest ever according to Nasa data.
- 4) The National Oceanic and Atmospheric Administration calculates temperatures slightly differently.

175. Arctic and Climate Change #061175

- 1) With the Arctic the fastest warming region on the planet, climate change is already altering key components of the Arctic environment.
- 2) Some of the clearest signs of change are the thinning and retreat of sea ice and the migration of species into the Arctic that normally live at lower latitudes.
- 3) The response of the Arctic to climate change will have an unprecedented impact on how the Arctic ecosystem operates.
- 4) This is likely to affect the UK's climate and economy, with anticipated impacts on industries like tourism and fisheries.

176. Women during wars #061176

(仅大意, 非原文 Only the gist, not the original text.)

- 1) During wars, women had to go to work.
- 2) Women earned less, only a half of what men earned.
- 3) This was mainly because women do not have the same physical strength as men have.
- 4) But men stress on their own contribution when men come back after wars.

177. HUAWEI certification program #061177

- 1) Huawei offers college students a certification program.
- 2) This program includes various training courses.
- 3) The program exempts students from exam fees.
- 4) The fees used to be 200 to 500 dollars each student.

178. How to answer questions #061178

- 1) You must take account of how many marks are available for each part when you answer it.
- 2) Even if you think you can write more, don't spend 15 minutes answering a part worth only 5 marks.
- 3) Leave space at the end of your answer and come back to it if you have time to spare later.
- 4) And if you can't think of an answer to some part, leave a space and move on to the next part.
- 5) Don't write about something else if you don't know the correct answer – this is just a waste of your valuable time (and the examiner's).

179. Unprecedented opportunity #061179

- 1) We live in an age of unprecedented opportunity: with ambition, drive, and talent, you can rise to the top of your chosen profession regardless of where you started out.
- 2) But with opportunity comes responsibility.
- 3) Companies today aren't managing their knowledge of workers' careers.
- 4) Instead, you must be your own chief executive officer.
- 5) That means it's up to you to carve out your place in the world and know when to change course.

180. Population growth #061180

- 1) We'll likely have two billion more mouths to feed by mid-century – more than nine billion people.
- 2) But sheer population growth isn't the only reason we'll need more food.
- 3) The spread of prosperity across the world, especially in China and India, is driving an increased demand for meat, eggs, and dairy, boosting pressure to grow more corn and soybeans to feed more cattle, pigs, and chickens.
- 4) If these trends continue, the double whammy of population growth and richer diets will require to roughly double the amount of crops we grow by 2050.

181. Plato #061181

- 1) Although usually remembered today as a philosopher, Plato was also one of ancient Greece's most important patrons of mathematics.
- 2) Inspired by Pythagoras, he founded his Academy in Athens in 387 BCE, where he stressed mathematics as a way of understanding more about reality.
- 3) In particular, he was convinced that geometry was the key to unlocking the secrets of the universe.
- 4) The sign above the Academy entrance read: "Let no-one ignorant of geometry enter here".

182. Takeaway meals #061182

- 1) Over time, fashion and people's tastes change.
- 2) Such changes affect the demand for products and services.
- 3) Like changes in work patterns which tend to mean that fewer families sit down in the evening for a traditionally produced family meal, often because a lack of time.
- 4) In contrast, people now tend to spend more time shopping and are therefore more likely to spend time relaxing in a coffee shop or restaurant while on a shopping trip.
- 5) Consequently, people are now more likely to buy takeaway meals or convenience food, as opposed to ingredients for meals that take time to prepare.

183. Revise your paper #061183

- 1) Your first draft is complete, but your paper is far from finished.
- 2) The next step is to revise your paper: strengthen the content.
- 3) Start this at least a week before your paper is due.
- 4) In fact, you don't need to wait until you have a complete first draft to start revising.
- 5) You can revise individual paragraphs as you finish them as well.

184. Meerkats #061184

- 1) Meerkats, a small group-living mongooses in southern Africa, have been so extensively studied and filmed that we can follow individuals through their lives like characters in an animal soap opera.
- 2) The Kalahari Desert meerkats, *Suricata suricatta*, have been followed over generations.

- 3) They are so habituated to humans that they will climb on and off weighing scales when a scientist wants to weigh an animal.
- 4) It is remarkable that behavior, which at one time could only be observed by dedicated field workers, is now readily available for all of us to see.

185. O’Keeffe #061185

- 1) O’Keeffe never formally recorded her theories about art.
- 2) She did, however, leave a long trail of interviews and letters that reveal how she approached her painting practice—and the rituals, experiences, and environments that inspired her.
- 3) Correspondence with her husband, photographer Alfred Stieglitz, in particular, offers a raw, honest glimpse into O’Keeffe’s creative mind.
- 4) The two exchanged 25,000 pages of letters between 1915 and 1946, during which time she found her voice as an artist: first, through her flower paintings, and later, through landscapes and surrealistic still lifes inspired by her mountainous, skull-studded surroundings in New Mexico.

186. Travel speed to Mars #061186

- 1) To overcome the pull of gravity and reach another body in space you need to achieve a certain speed.
- 2) A journey to Mars from Earth’s surface requires a minimum total speed of nearly 30,000mph (approximately 13.1km/s).
- 3) This requires large rockets, tonnes of fuel, and complex orbital manoeuvring.
- 4) Due to the moon’s weaker gravitational field, the same journey from the lunar surface would “only” require a speed of 6,500mph (2.9km/s).
- 5) This is roughly one third of that necessary to reach the International Space Station from Earth.

187. Charles Darwin #061187

- 1) Charles Darwin was born on 12 February 1809 into a rich and powerful family.
- 2) His paternal grandfather was Erasmus Darwin, a famous scientist who came up with his own theory of evolution, while his maternal grandfather was Josiah Wedgwood, of pottery fame.
- 3) Despite this, for the first decades of his life Darwin failed to distinguish himself, first dropping out of medical studies in Edinburgh because he hated the sight of blood, and subsequently entering Cambridge to study for the profession of clergyman very much as second option.
- 4) Yet Darwin was gaining great skill as an amateur naturalist and it was this that allow him to seize the opportunity presented when he was offered an unpaid position as scientist on board the Beagle, a naval surveying ship bound for the farthest corners of the globe.
- 5) The five-year voyage was the making of Darwin, providing him with the wealth of observations of the natural world that established him as one of the foremost scientists of his age and provided the raw material for his revolutionary theory.

188. Medium #061188

- 1) Dependence, rivalry, envy, emulation: painting and photography, like members of a dysfunctional yet inseparable family, just cannot cast off lineages of influence and appropriation.
- 2) Photography, from its appearance in 1839, looked to painting for fundamental models of depiction.
- 3) Yet it threw the older medium into crisis, removing at a stroke painting's unique capacity to bear witness.
- 4) How these two media leapfrogged through the Victorian age, defining themselves against one another, is the subject of Tate Britain's exhibition Painting with Light.

189. Ecological Footprint #061189

- 1) Ecological footprint accounting measures the demand on and supply of nature.
- 2) On the demand side, the ecological footprint measures the ecological assets that a given population requires to produce the natural resources it consumes.

- 3) It tracks the use of six categories of productive surface areas; cropland, grazing land, fishing grounds, built-up land, forest area, and carbon demand on land.
- 4) On the supply side, a city, state or nation's bio- capacity represents the productivity of its ecological assets.
- 5) Both the ecological footprint and bio-capacity are expressed in global hectares—globally comparable, standardized hectares with world average productivity.

190. Marx #061190

- 1) Karl Marx is arguably the most of the most famous political philosopher of all time, but he was also one of the great foreign correspondents of the nineteenth century.
- 2) During his 11 years writing for the New York Tribune — their collaboration began in 1852 — Marx tackled an abundance of topics, from issues of class and the state to world affairs.
- 3) Particularly moving pieces highlight social inequality and starvation in Britain, while others explore his groundbreaking views on the slave and opium trades — Marx believed Western powers relied on these and would stop at nothing to protect their interests.
- 4) Above all, Marx's fresh perspective on nineteenth-century events encouraged his readers to think, and his writing is surprisingly relevant today.

191. Railway #061191

- 1) Railway, in the 1840s, intrigue has swirled around the Box Tunnel, a long, steep bypass near Bath, England.
- 2) The question was this: did the railway's creator, Isambard Kingdom Brunel, really have the tunnel carved in such a way that when the sun rose on his birthday—April 9th—it would be flooded with light?
- 3) This past Sunday, April 9th, the railway's current engineers decided to test the rumor once and for all. They weren't disappointed.
- 4) "When you look from the east portal, the cutting provides a lovely V-shape," communications manager Paul Gentleman told the Guardian.
- 5) While the west side's view wasn't quite so impressive, the engineers generously chalked that up to centuries of dirt and grime.

192. The Mantle #061192

- 1) The mantle makes up 84 percent of Earth's volume, and though it's solid rock, over the course of millions of years, it behaves like a liquid.
- 2) This leads the tectonic plates on top to slowly jostle one another.
- 3) The buildup and sudden release of friction from this movement can cause earthquakes.
- 4) The movement also creates gaps in tectonic plates, which reduce the pressure on the mantle beneath it, allowing it to melt and push through.

193. Everest #061193

- 1) Fossilized fish remains have been found high up on the slopes of Everest proving that the world's highest mountain once lay at the bottom of the sea. How did this happen?
- 2) About 200 million years ago, the Indian subcontinent broke away from a vast southern super-continent called Gondwanaland. It drifted northeast across the sea and collided with the Asian landmass. These two huge landmasses buckled, rather like cars in a head-on collision, and rose up to form the world's tallest mountain.
- 3) One of the Tibetan names for this mountain translates as "Mountain So High That No Bird Can Fly Over It". It was first measured in 1852 and was called Peak XV until 1865, when it was named after the British Surveyor of India, Sir George Everest.
- 4) Mapping the Himalayas and Everest wasn't easy. Foreigners were not welcome, so Himalayan traders were recruited to infiltrate the area and gather enough information to allow accurate maps to be made.

194. Energy Research #061194

- 1) Many countries are suffering a shortage of scholars of new energy.
- 2) Especially engineers about new energy with the climate change.
- 3) The money distributed in energy research will double.
- 4) Becoming an engineer not only means more opportunities in their career but will gain more money in their research.

195. Art History #061195

- 1) Art history is the study of objects of art in their historical development and stylistic contexts.
- 2) The study includes painting, sculpture, architecture, ceramics, furniture, and other decorative objects.
- 3) Art history is the history of different groups of people and their culture represented throughout their artwork.
- 4) Art historians compare different time periods in art history.
- 5) As a term, art history (its product being history of art) encompasses several methods of studying the visual arts; in common usage referring to works of art and architecture.

196. Financial Stability #061196

- 1) Despite the financial stability a high salary brings, research has shown that the majority of top earners are not happy in their jobs.
- 2) It seems that the lack of psychological reward is the reason for their dissatisfaction.
- 3) However, most of these workers would not consider career alternatives.
- 4) Interestingly, it is not the risk of a decrease in salary which prevents this move.
- 5) The fear of criticism from colleagues, friends and family is the main factor that obstructs a change in their employment situation.

197. Toxicology #061197

- 1) Toxicology is often mixed with psychology, so it is necessary to make clear definition of toxicology.
- 2) Toxicology is a field of science that helps us understand the harmful effects that chemicals, substances, or situations, can have on people, animals, and the environment.
- 3) Toxicology uses the power of science to predict what, and how chemicals may cause harm and then shares that information to protect public health.

198. Engine Knock #061198

- 1) Thomas Midgley started his career working on a major problem of the day, called 'engine knock', where fuel burnt in an uncontrolled explosion.
- 2) At that time additives could reduce the noise but none effectively got rid of it, until Midgley realised that adding lead to petrol solved the problem completely.
- 3) He then turned to refrigerators and was asked to work on safer alternatives to the toxic cooling chemicals used at that time, coming up with CFC gas as a solution.
- 4) These two chemicals gradually ate away at the atmosphere and poisoned millions of people's health for 50 years until their true impact was finally identified.

199. Millipede #061199

- 1) The leggiest creature on Earth lives in California: it's a three-centimeter-long (1.2 inch) millipede with 750 legs.
- 2) First seen by government scientists in 1928, Illacme plenipes, 'the acme of plentiful legs', keeps such a low profile that for the rest of the 20th century the species was thought to be extinct.
- 3) Then University of Arizona entomologist Paul Marek spied one near Silicon Valley.
- 4) Marek and colleagues' new paper, published Wednesday by the journal Zookeys, offers the first scientific description of Illacme plenipes, including insights into its strange anatomy.
- 5) For one thing, females have to up to 750 legs and males have more than 550.

200. Culturural Invasion #061200

- 1) It is well known that where the white man has invaded a primitive culture the most destructive effects have come not from physical weapons but from ideas.
- 2) Ideas are dangerous. The Holy office knew this full well when it caused heretics to be burned in days gone by.
- 3) Indeed, the concept of free speech only exists in our modern society because when you are inside a community to such a degree that it is very difficult to conceive of anything really destructive.
- 4) It is only someone looking on from outside that can inject the dangerous thoughts.

201. Controlled Nuclear Fission #061201

- 1) Faith in controlled nuclear fission is now being shown by the construction of atomic power stations.
- 2) In Britain, Calder Hall on the coast of Cumberland first made its contribution to the National Electricity grid in 1957.
- 3) Subsequently a chain of nuclear power stations was planned.
- 4) Of necessity they are sited near the coasts or tidal water because of the need of much water for cooling and a certain discharge of possible radioactive effluent.

202. Feeding Preferences #061202

- 1) The differences in feeding preferences lead, in turn, to differences in migratory habits.
- 2) The wildebeests follow, in their migration, the pattern of local rainfall.
- 3) The other species do likewise.
- 4) But when a new area is fueled by rain, the mammals migrate toward it in a set order to exploit it.
- 5) The sequence in which they migrate correlates with their body size.

203. Fostered Child #061203

- 1) According to the Australian Institute of Family Studies in 2014 a 11-year-old boy was unable to live with his family, due to child abuse.
- 2) But upbringing in the foster care system means he has no-one to help him. It's not his fault, yet he is being penalized for something he can't change.
- 3) He went to two schools while he was in foster care and one was Barr Beacon School, formerly Barr Beacon Language College, is a mixed comprehensive for foster children.
- 4) Children like him involved with child protective services were shown to have consistently low average math and reading standardized test scores.
- 5) One of the recommendations was to send him to his relatives who were willing to take care until he was 18. This resulted in a positive outcome in academic achievement.

204. Impacts by Meteorites #061204

- 1) Impacts by meteorites represent one mechanism that could cause global catastrophes and seriously influence the evolution of life all over the planet.
- 2) According to some estimates, the majority of all extinctions of species may be due to such impacts.
- 3) Such a perspective fundamentally changes our view of biological evolution.
- 4) The standard criterion for the survival of a species is its success in competing with other species and adapting to slowly changing environments.
- 5) Yet an equally important criterion is the ability of a species to survive random global ecological catastrophes due to impacts.

205. Top Executives Short #061205

- 1) The top executives of the large, mature, publicly held companies hold the conventional view when they stop to think of the equity owners' welfare.
- 2) They assume that they're using their shareholders' resources efficiently if the company's performance - especially ROE and earning per share - is good and if the shareholders don't rebel.
- 3) They assume that the stock market automatically penalizes any corporation that invests its resources poorly.
- 4) So companies investing well grow, enriching themselves and shareholders alike, and ensure competitiveness; companies investing poorly shrink, resulting, perhaps, in the placement of management.
- 5) In short, stock market performance and the company's financial performance are inexorably linked.

206. American Housing #061206

- 1) Americans bought far fewer new homes last month, according to government data released on Wednesday that showed sales fell at the fastest rate in 13 years.
- 2) House prices also eased as the median cost of a new home fell 2.1 percent from a year ago to \$239,800.

- 3) The pace of sales fell to 937,000 from a rate of 1.1m the previous month, while inventories of unsold homes stood at 537,000.
- 4) The biggest drop was in the west, where sales fell 37 percent to an annual rate of 166,000.
- 5) Stephen Stanley, chief economist at RBS Greenwich Capital, said: "Builders will probably have to continue to work off bloated stocks of finished homes for most of 2007."
- 6) However, the Federal Reserve views the overhang of unsold homes as a cause for concern but remains curiously.

207. Computer Science #061207

- 1) Why Applied Computer Science?
- 2) Our Applied Computer Science major is all about giving you the skills to solve computer-related problems.
- 3) With rapid advances in technology and new applications being developed constantly, it is hard to say what those problems will be.
- 4) One thing is for sure, though, it is going to be exciting finding out.

208. Be Objective #061208

- 1) Experts especially journalists, inevitably find it difficult to be objective because of their culture background.
- 2) Journalists tried their best not to be biased.
- 3) However, including every aspect of an issue is as easy as calling for every candidate to participate in presidential debate.
- 4) Some aspects are not included in the reporting.

209. Mayor #061209

- 1) Education scholars generally agree that mayors can help failing districts, but they are starting to utter warnings.
- 2) Last summer the editors of the Harvard educational review warned that mayoral control can reduce parents' influence on schools.
- 3) And they pointed to Mr. Bloomberg's aggressive style as an example of what not to do.

- 4) All this must be weighed up by the New York state legislature in 2009, when mayoral control is up for renewal-or scrapping.

210. TV Program #061210

- 1) Recycling electronic waste such as old computers, TVs, and monitors is a daunting challenge considering how much technology we all use today.
- 2) The challenge didn't deter IU students, who persuaded the IT Services department to launch its Electronic Waste Collection Days program.
- 3) On numerous dates throughout the year, students, faculty, and staff can drop off their old equipment to be completely recycled nothing ends up in a landfill.
- 4) Collection days netted more than 650,000 pounds of waste in 2010.

211. Panda #061211

- 1) We know very little about wild pandas because they are so rare and live in almost impenetrable forest.
- 2) But in 2010 and 2011, Vanessa Hull of Michigan State University and her colleagues were given permission to attach GPS tracking collars to five pandas in the Wolong National Nature Reserve in China.
- 3) The collars transmitted each animal's position every four hours, for up to two years. The team found that the home ranges of individual pandas overlapped and on a few occasions, two animals spent several weeks in close proximity.

212. Vaccines #061212

- 1) A healthy school setting gives all students the best chance to learn and grow.
- 2) Vaccines are very important to this effort.
- 3) They protect children from getting and spreading diseases that can make them very sick.
- 4) For this reason, we require children aged 2-months to 18-years old who are entering or attending child care, public school, or private school be vaccinated against certain diseases.

213. Egyptian Temple #061213

- 1) We know infinitely more about the wealthy people of Egypt than we do about the ordinary people, as almost all the monuments were made for the rich and influential.
- 2) Houses in which ordinary Egyptians lived have not been preserved, and when most people died they were buried in simple graves with few funerary goods.
- 3) Most of our traditional sources of information about the Old Kingdom are those concerned with death and the rituals surrounding death: these include pyramids, tombs and graves, but also statues, reliefs and paintings.
- 4) Even papyri come mainly from pyramid temples.
- 5) But this does not mean that death was the Egyptians' only preoccupation.

214. Employee Column #061214

- 1) Because of great demand, more and more employees are putting themselves into limit.
- 2) They go to work very early, from 7:00 to 8:00.
- 3) And they went home very late, some even overwork.
- 4) Many managers find the employee's performance column is decreasing.
- 5) They (managers) should avoid this phenomenon, because this is not good for the company.

215. Ants #061215

- 1) It's often said that ants can predict impending rain and respond by changing their behavior.
- 2) Some people say that if you see ants building their mounds higher, or building them from different materials, this might signal the coming of rain.
- 3) But is there any scientific evidence to support this piece of folk wisdom?
- 4) The short answer is "no", although it is a difficult question to answer partly because of the sheer diversity of ants - there are 13,000 named species on the planet!

216. Electronic Devices #061216

- 1) The invention of electronic devices is a huge step and advancement of humans.
- 2) Such as washing machine, video game players, etc.

- 3) But how to deal with e-waste has become a problem.
- 4) The amount of e-waste has been growing by 3% to 5% every year.

217. Therapeutic Goods #061217

- 1) A person or company located in New South Wales may not supply by wholesales any substance which is for their therapeutic use and included in Schedule 2 of the Poisons List.
- 2) Unless they are licensed or authorised to do so under the Poisons and Therapeutic Goods Regulation 1001, no one may supply these Schedule 1 substances.
- 3) Additionally, wholesales have an obligation to ensure that the persons or companies they supply are licensed or authorised, to obtain, use, supply or possess the substance.
- 4) Any breach of these regulations will result in immediate termination employment.

218. E-waste #061218

- 1) The global market for electrical and electronic equipment continues to expand, while the lifespan of many products becomes shorter.
- 2) The current global production of e-waste is estimated to be 20-25 million tonnes per year, with most e-waste being produced in Europe, the United States and Australasia.
- 3) In Europe e-waste is increasing at three to five percent a year, almost three times faster than the total waste stream.
- 4) Developing countries are also expected to triple their e-waste production over the next five years.

219. Immigration Policy #061219

- 1) Australia used to have a generous immigration policy for refugees fleeing violence and conflict.
- 2) We took even more than our share of refugees on a population-weighted basis.
- 3) With the election of a new administration, all refugees were subject to detention while waiting for a decision on their application.
- 4) At the same time, a raft of changes was introduced to alter Australia's migration law and policy.

- 5) The rate of refugee arrivals has indeed slowed; but, as some argue, at the expense of our human rights reputation.

220. Minister #061220

- 1) Employees did not quite understand the policy of Minister.
- 2) Hence, officials hosted some local sessions.
- 3) In these sessions, the involved employees complained about too long working hours, and the company admitted that they got profit from reducing cost of workers.
- 4) They reached an agreement which conveyed that they did not do well.

221. Mink #061221

- 1) The American mink has been present in Iceland since the 1930's and despite heavy hunting since 1939 the species has become well established.
- 2) The ecosystem in Iceland is simpler than in other areas where mink are found; the only other mammalian predator is the arctic fox.
- 3) Direct competition between these species appears to be minimal although the arctic fox will sometimes chase mink and disturb them while foraging.
- 4) Iceland is therefore an ideal place to study undisturbed feeding behaviour and ecology of mink.

222. Online Sessions #061222

- 1) When students are learning or taking exams, they will apply or recall the knowledge they've acquired.
- 2) Students will also think about the knowledge when they're writing essays.
- 3) Teachers will host online sessions for students to discuss.
- 4) By doing so, students can leave comments and go over all the information they have learned.

223. Blood Circulation #061223

- 1) The right ventricle pumps the blood from the right atrium into the lungs to pick up oxygen and remove carbon dioxide.

英澳新三国（同一国家任意三所院校） 1154

免收服务费申请 扫码咨询

- 2) The left atrium receives blood from the lungs.
- 3) This blood is rich in oxygen.
- 4) The left ventricle pumps the blood from the left atrium out to the body, supplying all organs with oxygen-rich blood.

224. Gender Stereotypes #061224

- 1) Gender-typed toy play leads to the promotion of different skills in boys and girls, with girls practicing communal roles and boys practicing agentic roles.
- 2) This guides children's activities in accordance with gender stereotypes and thus restricts their individual development potential.
- 3) Whereas play with stereotypically masculine toys, such as blocks and toy soldiers, is generally associated with the development of spatial skills and more aggressive behavior, playing with stereotypically feminine toys, such as baby dolls and stuffed animals, is associated with more nurturing behavior.
- 4) Play with sexualized dolls, such as Fashion Barbies, is even associated with a narrowing of perceived career options in girls.
- 5) In general, strongly gender-typed toys are less supportive of the development of children's physical, cognitive, and artistic skills than are gender-neutral or moderately gender-typed toys.
- 6) Therefore, playing predominantly with same-gender-typed toys limits the development of children's action repertoires in accordance with gender stereotypes and thus contributes to the perpetuation of gender stereotypes.

225. Chanan Tigay #061225

- 1) Don't expect a straightforward answer from Chanan Tigay about the authenticity or even the existence of what was promoted as the earliest version of the fifth and final book of the Jewish Torah, known to Christians as the Book of Deuteronomy in the Old Testament.
- 2) As an author who spent years trying to unravel a juicy mystery and get it down on paper, Tigay wants you to read his book, "The Lost Book of Moses: The Hunt for the World's Oldest Bible," to find the answer.

- 3) But at a talk on Wednesday, the writer, journalist, and fellow offered listeners an enticing peek, describing how he landed on the story of the mysterious manuscript and about his years trying to track down the document.
- 4) From the author's description, it was a wild, Indiana Jones-type ride that included a competition to find the relic, false starts, dead ends, trips to faraway places, and an ultimate breakthrough close to home.

226. Brain Function #061226

- 1) The brain is our most treasured possession.
- 2) It coordinates our movements, our words, our relationships, and the ability to pass on our genes.
- 3) Our body therefore protects the organ fiercely: The central nervous system polices particles traveling through the bloodstream and invites only the safest into our cognitive chamber.
- 4) This selective process occurs due to a proactive boundary known as the blood-brain barrier.
- 5) The barrier serves a vital role, but is also poses a tremendous challenge for scientists developing drugs to treat brain-based disorders.

227. Financial Literacy #061227

- 1) It is easy to assume that a programme of financial literacy can be set up quite quickly but there are numerous potential pitfalls which hold back a clear start time.
- 2) This is because when working with a variety of partners the potential for delays increase enormously.
- 3) There can be problems contacting organisers, difficulties in negotiating dates and times, problems finding suitable accommodation and general procrastination on the part of people who may have conflicting priorities.
- 4) In addition, there may be a need to provide group members with childcare facilities, which can add to the difficulty of finding suitable accommodation, equipment and staffing.

228. Sea Turtles #061228

- 1) The bony shell of a sea turtle can actually sense when something touches it.
- 2) A series of thin nerves run along the shell and detect pressure changes associated with touch.
- 3) The nerves do not contain pain receptors so scientists do not think sea turtles feel pain when touched on the shell, but these thin nerves could transmit information to other parts of the sea turtle's body.
- 4) In addition, researchers and scuba divers have observed sea turtles respond to the stimulation of being touched on the skin of their head and their flippers.

229. Bitcoin #061229

- 1) Bitcoin is an online money.
- 2) That's to say you need to download mobile phone app to use such money.
- 3) With above done it generates a bitcoin address.
- 4) This address can only be used once.

230. Wind in the valleys #061230

- 1) Around 1 billion people depend on water resources originating from the Hindu-Kush Karakoram Himalayan region, attributable to both rainfall and melting of snow and ice.
- 2) The wind in the valleys in the region plays an important role in transporting clouds and moisture and redistributing snow in the valleys, and so understanding what drives this wind is crucial.
- 3) Around the world, wind in valleys generally travels up the valley, and up the sides of mountains, during the day.
- 4) This is often driven by differences in pressure caused by the slopes of the mountains and the shape of the valleys.

231. Drivers licenses #061231

- 1) According to the research, more car accidents occur in the morning.
- 2) Particularly, most of those accidents happen between 1 am and 5 am, for example in Port Macquarie.

- 3) Especially, this happens very often among teenage drivers.
- 4) This should draw the public attention, and people should put more concerns on teenagers.
- 5) As a new method, it is advised to have more qualifications for teenagers to get licenses.

232. Deaf School #061232

- 1) In 1815, Thomas Hopkins Gallaudet got to know the Dr. Mason Fitch Cogswell family and their deaf daughter, Alice Cogswell, and they wanted to find educational methods towards the deaf.
- 2) Gallaudet went to Europe, and got acquaintance of Braidwood methods in Scotland (The Braidwood family, formerly of Edinburgh, Scotland, operated a school for the deaf in London as a family business).
- 3) In 1817, The Connecticut Asylum for the Education and Instruction of Deaf and Dumb Persons, the first permanent school for deaf Americans, opened.

233. Advertising #061233

- 1) Advertising is introducing goods and service and is sponsored by identical companies.
- 2) This allows companies to present their products in a less costly way to lots of people, particularly those are channel members.
- 3) In addition to traditional advertising on TV, marketers also find a less costly way for advertisement is digital media such as social media.
- 4) Marketers also consider other media: cinema, station.

234. Seawater Pollution #061234

- 1) Ocean pollution is a hard problem.
- 2) Companies legally drain/discard pollutants into the sea.
- 3) Seawater can dilute pollution to harmless.
- 4) How long will this situation last in North America.

235. Decline #061235

- 1) The decline in marriage rates and increase in divorce rates has led to a decrease in the proportion of the population that is formally married.
- 2) In 1986, 60% of the population aged 15 years and over were married; by 2001 this proportion had decreased to 55%.
- 3) Conversely the proportion of the population aged 15 years and over who were never married increased from 29% in 1986 to 32% in 2001.
- 4) At the same time, the proportion of the population who were divorced increased, from 5% in 1986 to 7% in 2001, while the proportion of the population who were widowed remained at around 6%.

236. Pronunciation #061236

- 1) Grammar is very important and is often paid attention to.
- 2) People also focus on vocabulary.
- 3) However, pronunciation is less known and people don't know how it is taught.
- 4) About what pronunciation is.
- 5) About how pronunciation is taught.

237. Major Review #061237

- 1) A major review of antidepressants has found they are largely ineffective and may even be harmful for children and teens' depression in the Amazon.
- 2) The true effectiveness and risk of serious harms is found in the borders of Amazon such as suicidal thoughts remain unclear because of the small number of trials and the selective reporting findings in published trials and clinical study reports.
- 3) The study authors recommend that children and adolescents taking antidepressants should be carefully monitored closely and permanently, and prohibit the study of children's antidepressants.
- 4) This was widely opposed by multi-billion companies that have already invested antidepressants.
- 5) It is therefore recommended a child-could self-approach starting with a low dose and building up gradually to prevent the side effects.

238. European Countries #061238

- 1) If you look at how a US city is laid out on a map, you usually find a grid pattern of streets going from north to south and east to west, and they cross at a very precise 90 degree angle.
- 2) In cities elsewhere, such as those in many European countries, streets follow a meandering pattern, following the rivers and natural landmarks.
- 3) This is not simply a case of an older, irregular pattern giving way to a later American invention, however.
- 4) The ancient Romans, for example, laid out their streets mathematically many years previously, and this also produced a grid pattern.

239. Scientists #061239

- 1) In 1875, the geologist Eduard Suess used the term biosphere to describe the location where all living things dwell.
- 2) Since this initial formulation, the term has been further developed and is now considered to encompass all the ecosystems of the Earth.
- 3) It includes every living organism on the planet as well as their interactions with the earth, water, and air.
- 4) The biosphere is thought to have developed about 3.5 billion years ago when the first living organisms began to appear.
- 5) Today, some scientists have argued that the biosphere itself is a kind of super organism.
- 6) Each of the plants, animals and other organisms serve as just a piece of the whole.

240. Drug Resistance #061240

- 1) Drug resistance is the leading cause of death in women with estrogen-receptor-positive breast cancer, the most common form of the disease.
- 2) Now, researchers have identified an ordinary dietary element that may increase the chances of a breast cancer becoming drug-resistant.
- 3) The connection of the amino acid leucine to drug resistance raises hopes that a relatively simple intervention, like a shift to a low-leucine diet, can reduce the incidence of drug

resistance, which is responsible for a large portion of the roughly 40,000 breast cancer deaths every year.

- 4) The work also raises the possibility that a drug could be developed to mirror the effects of that dietary restriction, by blocking cells' ability to take in leucine from the surrounding environment.

241. Mining Company #061241

- 1) In 1844 the Mendip Hills Mining Company began work in the Charterhouse area.
- 2) The company employed Cornish miners with experience and expertise of working deep tin mines.
- 3) Initially, the aim was to exploit the ore at depth, which previous miners could not reach.
- 4) Four deep shafts were sunk, up to 108m deep.

242. Geodetic Data #061242

- 1) A geodetic datum is a tool used to define the shape and size of the earth.
- 2) They can also define the reference point for the various coordinate systems used in mapping the earth.
- 3) True geodetic data, however, are only those which appeared after the 1700s.
- 4) Prior to that, the earth's ellipsoidal shape was not always taken into consideration, as many still believed it was flat.

243. Mandarin #061243

- 1) Mandarin is the most common language in the world as it is the official language of Mainland China, Taiwan, and one of the official languages of Singapore.
- 2) Thus, Mandarin is commonly referred to as 'Chinese'.
- 3) But in fact, it is just one of many Chinese languages.
- 4) Depending on the region, Chinese people also speak Wu, Hunanese, Jiangxinese, Hakka, Min, and many other languages.
- 5) Even in one province, there can be multiple languages spoken. For example, in Fujian province, you can hear Min, Fuzhounese, and Mandarin being spoken, each being very distinct from the other.

244. Locomotion #061244

- 1) Researchers need to understand why different forms of locomotion evolved.
- 2) Long-held assumptions, such as the need for energy efficiency, have already been overturned.
- 3) For example, a mechanical ankle brace can improve the metabolic efficiency of human walking, implying that walking is inefficient.
- 4) But variation of movement is important, too: such an ankle brace holds you back if you try to skip, gallop or skitter.
- 5) Similarly, legged robots struggle to deploy different gaits, just as roboticists struggle to enumerate them.

245. St. Johns River #061245

- 1) The St. Johns River is the longest river in Florida, running up the eastern coast of the state from St. Johns Marsh to the Atlantic Ocean.
- 2) The earliest people to live along the river were likely the hunter-gatherers known as Paleo-Indians, who inhabited the Florida Peninsula over 10,000 years ago.
- 3) It was Spanish missionaries who later established a mission at the mouth of the river.
- 4) The mission was named San Juan del Puerto (St. John of the Harbor), giving the river its name.

246. Leaf Structure #061246

- 1) The natural structure found within leaves could improve the performance of everything from rechargeable batteries to high-performance gas sensors, according to an international team of scientists.
- 2) The researchers have designed a porous material that utilises a vascular structure, such as that found in the veins of a leaf, and could make energy transfers more efficient.
- 3) The material could improve the performance of rechargeable batteries, optimising the charge and discharge process and relieving stresses within the battery electrodes, which, at the moment, limit their life span.
- 4) The same material could be used for high performance gas sensing or for catalysis to break down organic pollutants in water.

247. Crustaceans #061247

- 1) The last time you splurged on a live lobster for dinner, you might not have given any thought to how much the little guy was going to suffer as he boiled to death.
- 2) Until recently many researchers believed the crustacean nervous system too primitive to process pain.
- 3) Scientists at Queen's University in Belfast now think that crustaceans may be more sensitive to pain than previously thought.
- 4) And they found that crabs that experienced an electric shock when they hid under a safe, dark rock would eventually learn to avoid the hiding place.

248. Learning Categories #061248

- 1) Many of us are familiar with three broad categories in which people learn: visual learning, auditory learning, and kinesthetic learning.
- 2) Beyond these three categories, many theories of and approaches toward human learning potential have been established.
- 3) Among them is the theory of multiple intelligences developed by Howard Gardner, Ph.D., John H. and Elisabeth A. Hobbs Research Professor of Cognition and Education at the Harvard Graduate School of Education at Harvard University.
- 4) Gardner's early work in psychology and later in human cognition and human potential led to his development of the initial six intelligences.
- 5) Today there are nine intelligences, and the possibility of others may eventually expand the list.

249. Rectangle and Square #061249

- 1) A rectangle also has four sides.
- 2) The only difference is that rectangles' all four sides are not equal.
- 3) Two short lines equal to each other.
- 4) Two long lines (make some angle?) ...

250. Underground Life in Coober Pedy #061250

- 1) While Aboriginal people have long inhabited the area, miners first moved to Coober Pedy in 1916 after the discovery of opal in the surrounding rocks.
- 2) As a result of the intense heat, a number of miners living in town have chosen to live underground.
- 3) This has continued with much of the modern town being built underground.
- 4) Among the local public buildings found underground are three churches, a bookstore, an art gallery, a bar, and hotels.
- 5) Opals can be seen embedded in the walls of some of these hotel rooms.

251. Giant Pandas #061251

- 1) Pandas are the most expensive animal to keep in a zoo, costing about five times as much as an elephant.
- 2) Food alone is a logistical headache.
- 3) Giant pandas are not biologically herbivores, but for some reason they developed a taste for bamboo about 6,000 years ago and stopped eating a varied diet, including meat.
- 4) Bamboo, however, is low in nutrients and difficult to digest, which means pandas have to eat a lot and then rest.

252. Why a Candle Flame Always Points Up #061252

- 1) When a candle burns, the flame heats the nearby air and starts to rise.
- 2) This warm air moves up, cooler air and oxygen rush in at the bottom of the flame to replace it.
- 3) When that cooler air is heated, it too rises up and is replaced by cooler air at the base of the flame.
- 4) This creates a continual cycle of upward moving air around the flame (a convection current), which gives the flame its elongated or teardrop shape.
